>time. Sony dug the paper up years later and it became the Trinitron.

1920's is exceptionally unlikely. On the Air Television doesn't appear
until about 1939. Colour become of interest in the late 1940, and
several competiting systems were developed. The winner was RCA, who
also developed the Shadow mask tube. To the winners go the spoils?

Same Lawrence, but developed in the early 1950's by Lawrence. As is
often the case, for maximum protection you try not to have a patent
issue for as long as you can stall it, so the patent is finally issued
about the time Lawrence dies.

Sony recognized the potential, and bought the patent rights about
1960. The patent, and the renewal ran for 34 years, which is why you
saw everybody and his brother start to turn out 'Trinitron' technology
tubes in the early 1990's on the same day. The patent and extension
expired, and the technology became public domain.

Are you insane? What's wrong with a 22 g piece of single strand? As
long as you don't knick it, it's quite strong.

Some of the first color tv sets used a rotating wheel/disk with red,cyan,and blue (or was it yellow?) segments in the rotating wheel/disk to create color tv.I have an old Popular Mechanics magazine somewhere around here that tells all about it.And there were converter kits available for people who wanted to convert their black and white tv sets to color tv sets.Those tube type tv sets were always needing some sort of repair work done on them.

Greg,

The House and Senate Intelligence Committees both have independent access and review of US Intelligence Information that is 'separate' form the White House. This is the very system that Congress 'designed' and Funded (Under-Funded). In reality the roots of the US Intelligence Failures go way back to Senator Frank Church and the so called "Church Committee" {Select Committee to Study Governmental Operations}

A BIT OF HISTORY:
The Real Roots of the current Problems in the US Intelligence Services began in 1975. In 1975, Senator Frank Church (Idaho-Dem) became the Chairman of the Select Committee to Study Governmental Operations with Respect to Intelligence Activities. This committee investigated alleged abuses of power by the Central Intelligence Agency and the Federal Bureau of Intelligence.
http://www.spartacus.schoolnet.co.uk/USAchurchF.htm
http://bioguide.congress.gov/scripts/biodisplay.pl?index=C000388
NOTE: This occured under President Ford who replaced Nixon.
FWIW: It was President Jimmy Carter who really built the "FireWall" between the FBI and CIA.
TBL: Every Congress from 1975 to "9/11" has underfunded the Domestic Intelligence Services and continued to foster a Legal 'disconnect' between the FBI and CIA.
Final Report of the Select Committee to Study Governmental Operations with Respect to Intelligence Activities of the United States Senate, 94th Congress, 2nd Session, 1976:
http://www.derechos.net/paulwolf/cointelpro/cointel.htm
IV. CONCLUSIONS AND RECOMMENDATIONS

2034. Antenna Guy Wire (Guide Wires) - Think Nylon-Poly Rope . . . and Why not a Hidden Antenna !

Newsgroup: rec.radio.shortwave
Date: 2005-10-13 03:00:46 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129172446.548575.201620@g14g2000cwa.googlegroups.com>

Cyclops,

Antenna Guy Wire (Guide Wires) - Think Nylon-Poly Rope
. . . and Why not a Hidden Antenna !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5765

For Antenna GuyWire (Guide Wire) often Nylon-Poly Rope is the
better answer for Rigging and Guying the Antenna and Mast.

FIRST - Consider a {Hidden] Shortwave Listening (SWL) Antenna !

Using the Guy Wires as a [Hidden] Shortwave Listener Antenna :
If you want to build-in a pair of Inverted "V" Antennas
using Four (4) Guy Wires in two Pairs each.

* Pre-cut and Rig four Guy Wires with 3-5 Feet Nylon-Poly
Rope "Top" Sections connected to an Insulator that is
connected to "Middle" Section made of CopperWeld Antenna
Wire about 30-50 Feet long with a 3-5 Foot Tag-End of
CopperWeld Antenna Wire to be coonected to the Feed-in-Line.
Then the Middle Section is connected to an Insulator that
is connected to a "Bottom" Section that is 5-30 Feet of
Nylon-Poly Rope.

* Attach the Coax Cable Feed-in-Line directly to a Pairs
of Guy Wires the the Center to one Guy Wire and the Shield
to the other Guy Wire. Repeat this step for the second set
of Guy Wires. Use a 4:1 matching Transformer (Balun) if
you want more broad banded performance from these Inverted
"V" Antennas.

* Rig the 40 Foot Push-Up Pole for your Mast for the Discone
Antenna with one Pair of Guy Wires [Hidden] Inverted "V" Antenna
near North-to-South; and the other Pair of Guy Wires [Hidden]
Inverted "V" Antenna near East-to-West.

NOTE - To those of you with an old TV Antenna on the Roof
or in the Backyard. This Guy Wires [Hidden] Inverted "V"
Antenna 'idea' can keep the little lady and the neighbors
happy, all the while greatly inmproving your Shortwave
Listening. The Knowing is in the Doing :o)

My favorite Bond movie was From Russia with Love & Moon Racker.

The first two actor who played James Bond were good. After Roger Moore left, I have not seen another Bond movie.

When I first saw the movie Mad Max, for a moment I thought it was a Bond movie. LOL!

Maybe they should make an animation of James Bond. I think I've seen the title in comic books.

BTW Adam West was the best Batman!

Re: INDONESIAN invasion of Australia in 2010
« Reply #45 on Today at 2:14am »

It is being reported that a 'think tank' on strategic and defence issues has determined that there will be a major conflict in South Asia/SEA and a major CNB attack on the US within the next 15 years. The fallout from the conflicts will affect Australia.

It has stated that Australia will need at least 100 frontline aircraft and a complete overhaul of existing and many additional military assets to deal with the consequences.

Most of the really old wall clocks had a hole in the face,
through which a red fla showed if there had been a power failure.
since they started right up after a failure (or more) you could figure
out the total time the power had been off, even after multiple drops,
by subtracting the time shown from the correct time.

When you pulled the stem down to set correct time, the red
part of the flag disappeared from the hole in the face, leaving the
white half behind the hole. the flag was made of thin sheet metal and
was held up by the magnetic field of the motor and reset by pulling
the stem down. Once dropped during tan outage, the motor's mag field
was not strong enough to pull the flag up by itself.

The biggest quakes and the most infrequent happen at the New Madrid...Back
in the 1700's they had a shaker there that rang the church bells in
Philidelphia...since it was sparsly populated not much damage however the
Mississippi River ran UPSTREAM for quite a while after that!

8.0 ?

Its nothing compared to to what could happen.

Exactly. That was the Telechron/GE movement, the best single
electric clock movement ever devised. When GE got full control of the
company on Henry Warren's retirement, they began methodically "dumbing
down" the movment design until it eventually became the cheapie that is

almost universal in all of todays 120V AC clocks. And yes, I collect
and rebuild those Telechron/GE clocks from the thirties and forties as a
hobby - in case you hadn't guessed!!

Tony

For your information, it's not Radio France International on LW 162 kHz, but
France Inter, the national home programme provided by Radio France.

If you are interested I have some vues of the transmitter site on my web site

Fear Can Turn Us All Into 'Good Germans.'
We Must Resist It
by Harley Sorensen

One of life's mysteries, for me, is how masses of people can do the incredibly cruel things they do. Individual brutality makes a certain amount of sense in that it's limited to one person. But mass brutality?
I think this subject first came to mind after I read Adolf Hitler's Mein Kampf and William L. Shirer's The Rise and Fall of the Third Reich, A History of Nazi Germany.

There was nothing in either book that told me how such a highly civilized and culturally advanced nation as Germany could sink to the level of the Nazis.

"How could that happen?" I wondered.

"What is there about the Germans that allowed them to become the monsters they became? How are they different than the rest of us?"

So I spent a month pondering the question.

The answer I came up with satisfied me then, and it satisfies me still: There is nothing different about the World War II Germans. What happened to them could happen to anyone. It could happen to us. We are no better than them.

As Pogo so famously said (about pollution) on Earth Day in 1971:

"We have met the enemy and he is us."

I'm reminded of all this now because of the way we Americans blindly follow George W. Bush into battle all over the world. We're fighting in Afghanistan for sure, probably in Pakistan, in the Philippines, in Colombia, and soon in Iraq if the signals we're hearing mean anything. I'm sure I've missed other combat zones, and there is good reason to believe we've conducted clandestine operations in Venezuela.

Similarly, our friends and allies in Israel blindly follow the lead of the serial war criminal, Ariel Sharon, by fighting and committing

atrocities against their neighbors, the Palestinians.

The formula to become a brutish leader, as Jean-Marie Le Pen proved recently in France, is a two-step process. First, you convince the masses they are in grave danger (Le Pen used immigrants as his boogie man), then you promise to save them.

That's exactly what Hitler did, and it's exactly what Bush and Sharon are doing.

Generally speaking, people who feel fear seem willing to throw away all their morals and principles. If you don't believe that, go to the airport and watch thousands of otherwise proud people line up like sheep to be publicly humiliated in the name of safety.

But not everybody buys into the Save-Me-From-The-Evildoers syndrome. To make that point, let me refer to a remarkable e-mail I got last week.

It's from a Jewish man. I won't name him, because what he said could cause him trouble.

"I am a 'recovering Jew'," he wrote, "one who was born in the U.S. However, through a series of events having mainly to do with (a) being indoctrinated with 'Jewish values' in religious school, and (b) traveling to Europe and seeing the concentration camps and then by overreacting and immigrating to Israel, I came to the conclusion that religion itself is responsible for more suffering than I could ever imagine on my own."

"The absolute fact of the matter is that I could never reconcile the fact that Jews would call themselves special, while everyone else is different. Particularly, I could not understand how these people could claim to speak to The Almighty while declaring everyone else as somehow inferior, in that regard at least."

"I learned that Jews have a glib way of characterizing and stigmatizing other racial groups (as though being Jewish is a race) by referring to blacks as "schwarzes"or gays as "feygales"or non-Jews as "goyim." In short, my U.S. citizenship and belief in equal rights conflicted with Judaism."

"Insofar as Israel is concerned, I wound up on the West Bank in the early '80s, way before the Intifada began. I remember Jews there referring to the Palestinians as vermin and scum. The Jews boasted that the Arabs were there to do the hard labor, like construction and cleaning, for little money. Basically, I could not reconcile the fact that these people who proclaimed their distaste for slavery could in fact be the ones perpetrating it on others."

"I left Israel abruptly after only a few years there. I had met Ariel Sharon personally. He loved to visit the settlement where I lived because that is where his power base is located. His good-old-boy

network of Jewish hit men and terrorists who boobie trap Arab cars and do hit-and-run shootouts is located there, and sadly they derive a large portion of their funding from Jewish groups located in the U.S. who receive tax-free status here."

"The beef among Arabs, whether it is Al Queda or Hamas, is that Israel has been labeled a democracy by the U.S., and they have been labeled terrorists. This is not about religion; it is rather about saying what you mean and meaning what you say."

"Sadly, though, the foreign policy of the U.S. is to recognize Israel's right not only to exist but to intimidate the Arabs around them for the sake of putting them on notice that if they ever decide to cut off the oil then Israel will ally itself with the U.S."

"This is a game, and it is sadly a game that has turned Jews into terrorists. Therefore, I decided not to be Jewish, because I refuse to take part in this blood for oil game. I believe in the right of all people to live in peace, and insofar as that is concerned I have taken this position."

What I found most remarkable about this letter is the writer's honesty. Too many American Jews, it seems to me, march in lock step with the hardest of the Israeli hardliners.

It's the fear factor, I believe. They go against their basic decent instincts and support a brutal regime for fear of being criticized or ostracized as traitors. Peer pressure.

You see the same thing with Americans' blind support of Bush's war policies.

"If you're not for us, you're against us," Bush said, immediately making sheep out of otherwise hard-nosed, independent-thinking Americans.

Driven by fear, masses of people can do horrible things. Now is a good time to recall the admonition of Franklin Delano Roosevelt, who said:

"The only thing we have to fear is fear itself."

Roosevelt's warning was about the Great Depression, but the words are appropriate now. Fear can turn us all into "good Germans." We must resist it. We must not let it turn us into sheep.

Heard Siberia on 279khz this morning - Yuzho-Sakhalinsk or somesuch..
moderately good signal (S4) at 1410 UTC
on the West coast of Canada (Vancouver Island)
with a Drake R8, Wellbrook ALA100 and homebrew PVC Loop.

As usual, the low-band on MW was chock-s-block
with Korean, Japanese and Chinese stations..

some of us are a little more sensitive.

I grew up in e-quake country, so I get rather sensitive to ground movements.
I still feel them ocassionally here in phoenix (they have to be at least a 4
in california to be noticed here at all).

of course, it does help to live on top of an alluvial deposit with bedrock
600+ feet down and sloping upward toward the east. makes for some
interesting vibrational amplification. :)

DaviD - So in your America a person does not have
Freedom of Religion "or the free exercise thereof"
.
The Coach did not Organize the Prayer.
.
The Coach did not Lead the Prayer.
.
DaviD - In 'your' America the Coach can NOT participate in the Prayer.
So now 'you' have eliminated one of the Basic Civil Rights of One
American Citizen. Plus in the Process He is Fired from His Job
for Exercising this Basic Civil Right.

DaviD - This is what we mean when we say that the Public Schools
have created a Hostile Environment toward Christians and
Persons-of-Faith.

DaviD - 'you' are so ready to call others NAZIs and Fascist.
But when 'you' Advocate the Elimination of One Basic Civil
Right for One Citizen then 'you' are taking the First Step down
the Path that Leads to a Totalitarian State be it Fascist or
Communist.

welcome to david's america where christians can not pray ~ RHF

"K",

Now that you mention this I do remember that little Hole in our
old Kitchen Clock; but forgot the about the Little Red Dot thingee.

My Uncle up in Sacramento, CA had a little Light Box thingee in
the Kitchen. Had one of those Small Round Red 7.5 Watt Light
Bulbs on top with a Buttom on the front. Plug it in and Press
the Buttom to get the Red Light to go out. Then when the Power
went Off : The Red Light would come on letting you know that the
Power had gone Off.

www.devilfinder.com Nine O' Clock Washing - Tea Clock

I own an old wind up clock that is made just like that clock.Except it isn't an advertizing clock and instead of the ring on top of the clock,it has a handle that looks just like an oversize winding handle and there is a little round sliding knob just to the left side of the handle,to shut off the alarm,I suppose.(handle is on top of the bell on top of the clock) The clock has a small dial in the top part of the dial face for the alarm.The clock has a plain white dial face which says Lord Baltimore on the dial face.The clocks case/houshing is very,very rusty and the back plate of the clock is missing and the mainspring is broken.I bought the clock at a Goodwill store about twelve years ago.It is a piece of junk of an old clock considering the condition it is in now,but I don't care,I like it anyway.What company made the clock?

The coach is an authority figure employed by the public, taxpayer
funded institution. As such, he is not allowed to promote a single
religion to the exclusion of other religions, or no religion at all.

This is the American way.

You have the right to be as religious as you like. Just keep it in
your pants.

I wouldn't argue with real-life experience, but here's my take based on a wobbly grasp of theory:

Since it's a passive design, the amount of signal captured is limited by its very short 2m length, which is considerably under 1/10th wavelength for many SWL frequencies in heaviest use right now as the solar cycle has waned. So although it is potentially *very* quiet, I'd predict its performance would rely quite heavily on having a quiet, low-noise receiver.

So for a good tabletop, it might do well. For a noisier radio, you might as well forget it.

Performance would also depend on being mounted relatively far from local electrical noise sources -- so you wouldn't want to mount it close to a house with PCs and electronic gizmos running while you SWL. That's because, even though a passive antenna won't add (more than a tiny bit of thermal) noise, if it picks up local noise it's going right down the coax into your receiver.

A few years ago I did a ton of experiments with homebrew antennas with 9:1 transformers in different configurations, and came to the

conclusion that all of those options were inferior to a Wellbrook loop (which is an active design, btw.) Even with a Drake R8B, which is no slouch of a radio.

What a great invention, the tape recorder. Well, I grew up using those Panasonics table flat tape recorders. You know the ones that was part good plastic and part metal, the red rec., tone button, a sliding handle.

Radio shack makes a cheap version of it.

Their were very popular in my day. Although the reel to reel was still in use, like I've often seen on Mission Impossible, but I never had one.

As for radio listening, it would be nice to recorder my favorite radio shows (like Coast to Coast AM).

But do they make a tape recorder that could handle 4 or 5 hours? And set it up to recorder at a future time?

SR?

Still a lot of it going on here. Who knows who's jamming whom..

http://www.geocities.com/lectroncity/Korea.jamming.mp3

First section of the file is a jammer on 855 KHz. This is one of the primary types used.

Second section is an example of brute force jamming using programming. You can just hear the other station in the background. This one is on 1080 KHz.

Third section is a new type I've not heard here before. It's on 810 KHz, which usually has the same type as on 855 KHz, but today is more of a solid tone type.

Yes. You can do it digitally a LOT easier. Pogo makes AM/FM radios with up to 70+ hours of recording at 32kbs. Costs about $200.

You can also use your VCR. On slow speed, you can get reasonably good audio (if it's a Hi-Fi VCR, you'll likely not notice the slow speed losses) And with a 120 minute tape, you can get 8 hours of stereo audio on a single tape.

But if you're determined to use audio tape, Viking, and Norwood both make a cassette machine that runs at 1/4 speed. Depending on the tape, you can get 4 continuous hours without a problem.

Open reel machines that can run down to 1 7/8 ips, running a 3600 ft tape, if you can find one, can 6 hours.

For One and All,

So now the BBC is saying that the HN51 Bird Flu is now in Europe specifically in Turkey and Romania. The EU is now ramping up their Vaccine production efforts.

Two Rumors Persist :

1. The Chinese Communist Government originally genetically engineered the HN51 Bird Flu Virus.

2. That Al-Qaeda has the HN51 Bird Flu Virus and plans to use it as a Global Weapon of Terror (Mass Killing) against every non Islamic Nation of the World.

Liberals believe reason and fact form the basis for policy and
governance, not superstition or emotion or religious opinion (as there
is no such thing as religious fact.)

Taliban believes whatever the Koran says is to be law.

Christian fundamentalists believe whatever the Bible says should be
law.

That's why they are similar.

Poll the top 1% in intelligence and almost all are "liberal".
That's no accident.

Really easy. Get a radio with at least a mono audio out jack.
Get an RCA (double male) and run it to the audio in jack on your VCR.
Use a standard stereo pair if you have stereo jacks on both units. a
Y-adapter may be helpful if only one unit is stereo.

Tune the radio to the station you want to record, turn the
volume down if you want, then set the VCR to record right away or
program it to turn on later as desired. I often do this when I will be
out of the house and want to tape a series of music programs.

By the way, if you set the VCR to its lowest speed and get
T-160 tapes instead of T-120 tapes, you can record up to eight hours
of programming. You may want to use a higher speed if the material and
your ears warrant.

On playback, you'll probably just get a bluescreen for the
video.

Finally, I've not ever had to do anything about the audio
level. Since the out audio is taken off before the volume control, it
doesn't matter whether you leave the volume up or down.

Yup. Not only does silt or landfill effectively "liquify" under intense shaking, amplifying the amount of ground motion as you mentioned, but also earthquake waves attenuate faster with distance in the repeatedly-fractured and stressed (and thus weakened) rock in earthquake-prone regions.

What can really do widespread damage is a large quake in regions where quakes are rare and relatively unfractured bedrock can transmit vibration efficiently. The New Madrid fault is kinda scary that way here in the US.

2187. There are Grounds and then there are Grounds. . . Being Well Grounded !

Newsgroup: rec.radio.shortwave
Date: 2005-10-14 11:02:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129287735.016947.85040@g49g2000cwa.googlegroups.com>
Source record: 44497

FC,

So this is a simple (not-too-technical) explanation.

There are Grounds and then there are Grounds. . .
Being Well Grounded !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5822

First you have your Household Electrical System Ground :
Commonly called the House's Safety Ground.

Then you have your Shack's Ground that is 'tied' into the
House's Safety Ground. This is logical since your Radios
and Shack's Equipment is usually powered by the House's
AC Electrical Power System. The Shack's Ground often is
an Eight Foot (8') Ground Rod that is place into the
Ground near the Shack and then connected via a Wire to
the House's Main Service Entry Box where the Primary
Safety Ground is connected (or should be connected).

Now your Shortwave Antennas unless they are Balanced
'type' Antennas like a Dipole or Loop. Also "Require"
(Need) a Ground for the RF Signal that is developed by
the un-balanced Antenna. So this is the RF Signal
{Return Path} Ground. Most of the time with a simple
LongWire (Random Wire) Antenna this is via the Antenna
Terminal (Plug) on your Radio or Equipment. Sometimes
an electrical component(s) is in this RF Signal path but
for these RF Signal they look like a direct connection.
The Radio's Antenna Input is the Load that the RF Signal
is developed against along with the Shack's Ground.

For more complex Antenna and Ground Systems the Antenna
may have it's own Ground at/near the Feed-Point of the
Antenna. Often with these types of Antenna and Ground
installations a Matching Transformer (Balun/UnUn) is
used with the Larger Primary Winding of the Matching
Transformer connected across the Antenna and Ground.
This Primary Winding provides a Direct DC Current Path
between the Antenna's Wire Element and the Ground Rod.
However to RF Signals it looks like a Higher Resistance
(Reactance) and acts as a Load between the Antenna and
Ground to develop a Signal across which is coupled to
the Secondary Winding that feed the Coax Cable to the
Radio/Receivers.

The Best Lightning Protection that most people have with
the common Antenna and Ground Systems is to DISCONNECT
Their Antennas From the Radios and Equipment When They
Are Not Being Used [.] It is better to Disconnect the
Antennas at the point where the Coax Cable is connected
to the Antenna or Matching Transformer. If you can not
do this and you simply want to "Turn-Off" the Antenna
from the Radios and Equipment. Then an Antenna Switch
that is Grounded and has a Disconnected (Neutral) Position
is a 'fair' alternative choice in areas that have very
little Thunder and Lightning Storms.

Well I know that I have not answered all of your questions.
But may be I have answered some of your questions; and
that is a start.

Comments ? ? ? and any Additional Information ! ! !

hope this helps - iane ~ RHF

= = = Frank Cangemi <m*rch*8*9*9@y...> wrote:

RHF,

I'm trying to understand the purpose of the ground wire.
I've always understood the ground to be a safety path for
things like shorts or lightning strikes, but what confuses
me is that the ground flow would seem to be stealing energy
away from the antenna. If I hook to my radio my 80 ft longwire
or my rhombic wire on the roof, I get a big increase in signal
strength. The ladder wire coming into the radio gets hooked
either to the antenna jack or whip using an alligator clip.
Would these already contain a ground connection, or would I
gain by hooking up a separate ground? I'm trying to visualize
your description of the ground in the last post.

Thanks...
Frank in Boston

Hi, Ross. Good to see you again.

I used to live near the New Madrid fault. Quakes were pretty scary, and they did transmit shocks over vast distances.

What made New Madrid particularly worrisome, was that it IS largely unshorn bedrock. Meaning that pressures can build to a much greater amplitude before release than other, more well fractured fault areas. Which can still be destructive, but more localized.

After one particularly mild quake, this must be 40+ years ago (I remember it was during the "Fugitive" on a Tuesday night) the the bed frames, on casters, rolled around the master bedroom in the house. The next day the talk on KMOX was all about the quake, and one of the seismologists working at either one of the schools, or maybe even the planetarium, started going on about how the New Madrid fault was largely stable, which made it all the more dangerous. Unlike the San Andreas fault, which has been quite active with small quakes for centuries, New Madrid is by comparison less active, but the quakes are usually larger, and more widely cast because of the large areas of thicker and more unfactured bedrock. That pressures could conceivably build to levels that, when they were released, would produce 'Wrath of God' cataclysm. And he went on to describe the scenario whereby "The Big One" would be most likely New Madrid, not San Andreas. That the thought of California breaking off into the ocean was less likely than oceanfront resorts opening up in Alton.

This sent a firestorm of horrors through the area. School teachers started doing special classes on earthquakes, with extraordinarily distorted geology, and they would preach about how New Madrid was the worst fault in the solar system. Kids were taking all this and going

home telling their parents to sell the house, pack up and move to higher ground, because St Louis was about to become the modern day sister city to Atlantis.

That chaos went on for several months, and the legends continued for several years thereafter. All kind of amusing now. More than a little disturbing then.

It also underscored the power of misinformation and suggestion. And the power of well disseminated propaganda.

My brother was still doing earthquake drills at the high school nearly a decade later.

> have often wondered if Mountain areas have something to do with some Earthquakes.I think so.<

Mountain ranges, in many cases owing their existences to faults and plate activity, and in others to volcanic activity, are inseperable from earthquakes.

>Eons ago,Earth upheavels raised land up and created the Mountains and maybe in some areas,Mountains are slip slideing around and causing some Earthquakes.<

Sort of, and the other way around, too - the earthquakes make the mountains. In around 1870, IIRC, Mt. Whitney rose several feet in a magnitude 8 Eastern Sierra quake (the Sierra Nevada batholith rose yet again); and in 1989, local summits in the Santa Cruz Mountains of California rose 3 feet or so in the Loma Prieta mag 7 temblor. The Tetons of Wyoming and several subranges of the Rockies still exhibit this pattern as well.

>Yesterday,I read an article that our Sun might be causing some Earthquakes.<

Hmmmm...through tidal forces? I can't imagine any othee specific influence the sun might have...

>Get a pet dog or cat,if the dog or cat starts acting crazy, that means an Earthquake is imminent.<

My animals are certifiably nuts anyway - I doubt if you'd be able to tell their quake behavior apart from their normal state of hysteria.

I have an old Select-A-Tenna, which I pulled out of the closet last night when I had trouble hearing a station on my 7600GR. I found that it didn't help much, perhaps because the 7600GR has a decent ferrite antenna built into it. (The Select-A-Tenna helped tremendously with a little Grundig mini-world, though.)

I wonder if the "Q-stick" would have more to offer when using a portable receiver like the 7600GR or the SW77. Has anyone tried it?

I own two big reel to reel tape recorders and several cassette recorders and one RCA digital recorder,it will record up to six hours.The little mini tape recorders with a two speed switch on them will record for about three and a half to about four hours on each side of a mini cassette. www.ccrane.com sells a small radio with a built in digital recorder and it can be set to turn on and record any time you want it too.I don't know if ccrane still sells those paticular digital recorder radios,but I know they used to.Check out their website.

There was a doctor guy (I don't remember his name just now) guest speaker on www.coasttocoastam.com last night.(it always takes me at least an hour or more to drift off to sleep) He said if you cook those birds properly,there is no problem.He is right about that too.A very dear lady friend of mine whom was an operating room nurse in an Arlington,Texas (she passed away a couple of years ago at 50 years old,cancer) hospital once said,If govt would leave us alone,we would all be better off,,, and she is right too.
All that stuff about avian bird flu is really no big deal,it is all about fed govt scare tactics and Follow The Money and who makes a lot of money from those millions of bird flu vaccines and more of people "getting used" to Military doing what each and every State in U.S.A.should be doing theirselves and no more Posse Comitatus.Those bird flu vaccines probally will not work anyway.Like that Doctor guy said,How can you design a bird flu vaccine when the bird flu isn't even here? He also said,U.S.A.keeps track of flu's in South America and designs flu vaccines based on those flu's in South America.
How rediculous is that!!??

What I have found most beneficial about winding
a fairly small (< 12 foot) loop is the
directional qualities and the resistance to
local noise.

What is extra freaky with the ALA100 is having
it plugged into the R8 and a uni-directional
helical whip attached to the Kenwood R2000.
On the R2000 (in the 60M band) you can hear
regular crashes of lightning static on top
of the received stations. On the R8, nothing.
Just the received station, nothing more.

Depends on what the ground is for. For safety, everything should be
grounded. For "mere" reception, a balanced antenna requires no ground.

THE WORLD ENDS TOMORROW AND YOU MAY DIE!

Well, no, probably not, but now we have snared your eyes and you
must not throw this baroquely cheesy pamphlet away before you
ask yourself what may be the most important questions of your
life.

ARE WE CONTROLLED BY SECRET FORCES?

ARE ALIEN SPACE MONSTERS BRINGING A STARTLING NEW WORLD?

DO PEOPLE THINK YOU'RE STRANGE? DO YOU?
...then you may be on the right track!

"Unpredictables" are not alone and may possess amazing hidden
powers of their own!

ARE YOU ABNORMAL? THEN YOU ARE PROBABLY B E T T E R THAN MOST
PEOPLE! YES! YOUR KIND SHALL TRIUMPH!

If you are what they call "different" --
If you think we're entering a new Dark Ages --
If you see the Universe as one vast morbid sense of humor --
If you are looking for an _inherently bogus_ religion that will
condone superior degeneracy and tell you that you are "above"
everyone else --

If you can help us with a donation --

Then THE CHURCH OF THE SUBGENIUS COULD SAVE YOUR SANITY!

The K7RA Solar Update

SEATTLE, WA, Oct 14, 2005--The fourth quarter of 2005 began
nearly two weeks ago, but last week's bulletin failed to mention the
average sunspot numbers for the quarter just ended. This is a
normal quarterly exercise, as we hope to spot trends in the solar
cycle.

Looking at the past two weeks, the average daily sunspot numbers
over the past week were up over 10 points to 21.7. Average daily
solar flux rose, but also by a slight degree, only 2-1/2 points to
78.4.

From the first quarter of 2003 through the third quarter of 2005, the
average daily sunspot number was 120.3, 107.3, 110.2, 99.2, 72.9,
71.3, 69.3, 61, 46.1, 55.7 and 58.

The average daily solar flux for the same period was 134.3, 124.2,
120.8, 137.4, 111.1, 99.5, 111, 104.8, 96.4, 93.1 and 93.6.

We could almost convince ourselves that the cycle has already
bottomed out if we look at quarterly sunspot numbers this year.
Last year's quarterly sunspot numbers dropped steadily from 72.9
at the first quarter of 2004, to 71.3, 69.3 and 61. 2005 began with a
big drop, to 46.1 in the first quarter, then rose to 55.7 and 58.
Could this cycle really have hit bottom during the first quarter of 2005?

The NOAA Space Environment Center Preliminary Report and Forecast for October 4
shows
the same smoothed sunspot number history and prediction table on page 10 that it
has shown
for quite some time now. In this table, the sunspot cycle appears to reach
minimum sometime
between December 2006 and January 2007.

But could it have reached minimum two years earlier? Maybe we should compare the
quarterly
numbers from the last sunspot cycle bottom, which according to the graph above
the page 10
table was in 1996. The quarterly average sunspot numbers from the fourth quarter
of 1995
through the third quarter of 1997 were 21.3, 13.1, 13, 12.4, 14.2, 11.3, 25.4
and 37.2.

We can see that the previous sunspot minimum was when the quarterly average
numbers were
between 11 and 13. This included some long periods of no sunspots at all, such

as the five
weeks in September and October 1996 when every day the sunspot number was zero. The
average daily sunspot number from September 1 through October 31 1996 was only 2.6.

So far this year, the quarterly averages were between 46 and 58--a rather high bottom if it is
one. We should probably just chalk this up to the normal variations throughout the solar cycle,
which never looks like a smooth, predictable moving line unless data from many days is
averaged. I think we should be very surprised if the fourth quarter of 2005 has an average daily
sunspot number above 60.

For the upcoming week, solar flux and sunspot values should remain about the same, which is
low. Predicted planetary A index for Friday through Monday, October 14-17 is 10, 12, 10 and 5.
According to Geophysical Institute Prague, October 18, 19 and 20 should be quiet, October 17
quiet to unsettled, unsettled conditions on October 14 and 16, and unsettled to active conditions
this Saturday, October 15.

Ever wonder why the planetary geomagnetic numbers are higher than the mid-latitude
numbers? It turns out the planetary numbers are all measured at fairly high latitude. Check the
latitudes of the observatories that supply the data for the planetary K index (which is used to
calculate the daily planetary A index). The average latitude for observatories in the Northern
Hemisphere is 55 degrees. For comparison, note that the United States/Canadian border is at
49 degrees from Manitoba to points west, and 55 degrees latitude is where Hudson Bay turns
into James Bay at the northern edge of Ontario. Since geomagnetic disturbances are generally
higher at high latitudes, no wonder the planetary geomagnetic indices read so high when activity
is up.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page.

Sunspot numbers for October 6 through October 12 were 28, 31, 24, 16, 11, 25 and 17, with a
mean of 21.7. The 10.7 cm flux was 79.5, 78.8, 78.1, 78.9, 79.1, 77.6, and 76.8, with a mean of

78.4. Estimated planetary A indices were 4, 11, 22, 9, 10, 6 and 1 with a mean of 9. Estimated
mid-latitude A indices were 2, 11, 16, 7, 7, 5 and 1, with a mean of 7.

A few months ago,I was considering making a fishing lure out of my DOA Tiny-Tenna.All I would need to do is attach a fish hook to it and use the antenna wire that is on it and let it troll along in the water.TIP:,,, if you are going fishing,get a can of sweet corn and poke some holes in the can with an ice pick and hang the can of sweet corn in the water.I read about that in a Field and Stream magazine many years ago.Unlike Tiny-Tennas and Select-A-Tennas,the sweet corn trick really does work.

Stephen,

Thanks for the heads up on the 60th anniversary card.

I got mine today, 9 days after submitting a reception report online
at http://www.rcinet.ca/rci/en/rapport.shtml

Mr. Westenhaver was kind enough to e-mail and let me know the
web form report had been received and that he'd mailed the QSL card.

You might consider getting a Radio Shark. It's a little AM/FM radio that attaches to a USB port. The software allows it to do what you want. Recording time is limited only by the capacity of your hard drive.

See it at: www.griffentechnology.com with which I am not affiliated.

Source record: 44516

Is it me (I hope so, I feel like me; pardon, I digress), or has John Stadtmiller taken a giant step backward.
He went from:

12.160 MHz from 2100 and 2200 UTC then:
7.465 MHz from 2200 to 2300 UTC

To:

11.920 MHz for both hours.

Reception wise, the net result for me is that I now have an extra hour to watch TV, and the second hour of the show is spent listening to Brent Johnson. Nice move Stadtmiller.

In John's usual form, when he was soliciting reception reports, anyone that said that he was "booming in" was instantly taken as sane, and any detractors of the new frequency concerning reception was branded as a nut that doesn't know how to use a shortwave radio.

Either John was forced to move, or else he was so motivated about saving $$$ that he has forsaken his listeners.

Dr. Artaud

Well, he could improve the bands even more by moving to something like 25.6mhz for late evening and night broadcasts to north america. And then switch to 2.3mhz for daytime activity.

why? what's so great about the R8? is it better than the R8A and R8B.
right now i'm loving my palstar R30CC, so much so i sold my kenwood
R-5000. This is an incredibly sensitive little radio. maybe i'll pick
up an R8 and run the two side by side.

I don't remember ever getting an answer to this question. However, I re-discovered this unit while moving the mess around, so I went ahead and got it running.

For an old 4-stage (4 each 49-44) TRF, it did pretty well. I could get WWV on 5MHz nicely in the early evening and later I copied CHU at 7.335MHz. I had about 50 feet of wire for an antenna. My Sony did a lot better even with its self-contained whip. Of course, so the my Grundig 100 PE.

I don't have the coil sets for decent shortwave listing (anyone have a spare C-348 or others?), so for now it will mostly be a curio set to WWV. I will give it a try for the 41m band later this fall and winter.

I bought one of this NOS still sealed in the box for $9.95 from Fair Radio Sales in 1970, along with two coil sets.

Steve

Reel to reel sounds like fun. I've always wanted one. Is it possibble
to record cw and play it back at a slower speed?

Also I would like to get something easy for me to work with. What do
you recomend?

Do they still make reels and do they all fit all machines?

Some VCRs need to "see" video to record properly. Tune to any TV
station that works, then use the simulcast mode of the VCR, i.e. record
the audio line input and any old video signal just to keep the VCR
happy.

Personally, I rather use a PC and the scanner recorder.
www.davee.com
or the total recorder
http://www.highcriteria.com/

For most signals, 11025Khz sampling will do. I generally record in PCM
since I have gigabytes to spare on the raid array.

There are a number of PC programs that will decode CW.

To play tape recorded CW slower would not be a big deal IF you don't
mind the tone itself being lower in pitch.

I see high end real to real tape recorders all the time at electronics
fleamarkets. You might pay a bit of money for a Revox or Otari, but
there are countless Teacs that go for under $100 and no takers. Some of
the Teac models have remote control ports. Still, I rather just record
on a PC since the file management is so much easier.

It sure seems like the non-plate kinds of faults build up stress very slowly and build up over centuries (or millenia) between ruptures. Seems like there's a trade-off: lots of generations have no problems at all with earthquakes, then once in a few hundred years, some generation wins the jackpot.

New Madrid gave rise to some big-to-gigantic ones. 7.7 and 7.0 in 1811 and 7.8 and 8.0 in 1812.
Same with the Cascadia subduction zone, which may have a 9.0 waiting every 300-1000 years.

But why choose between frequency and intensity when you can have it all?

If you like earthquake excitement, *Alaska's* the place to go! There seems to be an 8-class earthquake waiting for anyone who wants it: pretty much you won't go a lifetime without one.

And the Alaska quakes have gone up to 9.2 (1964), which goes beyond gigantic and into the realm the earth being an obnoxious show-off. ;)

http://neic.usgs.gov/neis/eqlists/large_usa.html

Note that that 9.2 in 1964 was the second largest earthquake ever recorded... so hitch up the dogsled and see (arguably) America's most beautiful state, but make sure your life insurance is paid up :)

How is it possible for him to be your 'boy' and my 'girlie' at the same time? He sounds like a rather confused individual. It would also explain why he couldn't decide who or what to marry.

We *could* start a fund for his gender change operation...once he decides what direction life should take him.

I like vintage things. I like the tactical feel of things. This is why I am a little intersted in reel to reel recording.

When I tune into CW on SW, often I drop the pitch. Now I realize that if I am going to record cw to then play it back at a slower speed, then I might have to record the cw at a higher pitch. Unless the reel to real recoder has a pitch button.

Then their is the radio drifting problem as of lately on 75m. Which I would have to monitor the whole recording process. Which is ok.

And sometimes the 2nd persons who is transmitting cw, might be at a whole different pitch. In fact that may not be a bad idea because it helps identify the other person. Sometimes I wonder if this is normal practice. Are cw ham stations suppose to be at a certain pitch?

Also, is it possible to tell if the cw transmission is by a straight key?

It would really be fun to copy cw at a slower speed. Sometimes it is hard for be to find someone transmitting at 5-10 wpm. It seems most are above 10 wpm.

And then their is RTTY, I am not too sure what that is. My Icom R75 has some kind of feature for this. I looked up RTTY in the book "Now Your Talking" in the glossary, but still I am not too sure what is it. But I will do some googling on this.

Each morning & night I practice the alphabet, q-signs, number and all.
Even my fore finger taps up & down when I'm in bed wondering about
the world of radio. LOL!

Thats how much I live with this thing!

The problem is that I hate the sound of this particular oscillator has.
Even with fresh batteries. The sound is sort of weak. Not a perfect
round beep sound like an old DOS beep. I tried setting the pitch or
tone button and volume button on the side, but still. What I like about
the key is that it is nice and heavy.

On the radio others who are transmitting sound so much better.

Is their a better oscillator for straight keys out there?

Radiomart will purchase a radio on ebay, put it up for auction a week later claiming he has had it in his collection for years, or has more than one and is getting rid of the extras. He nearly always uses a red background and photographs the object to make it appear much better than it really is.

Steve,

Jack Painter in Message # 5821 gave you a good answer.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5821

I will try to point out a different (less-than-perfert)
method of feeding two to four (2-4) Radio/receivers with
one Shortwave Listener's (SWLs) Antenna.

Using commonly available and low cost TV Splitters
and InLine Amplifiers for Shortwave Listening (SWL)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5843

THE ANSWER :
There is a simple answer to your attempt to Wire all of your
Radio/Receiver Antenna Inputs together : DON'T DO IT [.]

CHEAP AND DIRTY ALTERNATIVE
There is a cheap and dirty answer to your attempt to Wire
all of your Receiver Antenna Inputs together is to use
common TV 'type' Antenna Signal Splitters and InLine
Amplifiers that are readily available and low cost.

SPLITTERS :
"IF" you are not concerned with Signals below 5 MHz then
a simple cost effective method is to use a TV 'type' Single
Input with Four-Outputs Matching Transformer; these are often
called a 4-to-1 Signal Splitter. Not the best answer and
consider by most to be a poor answer. But usually a better
answer then the direct wiring of all your Radio's Antenna
Inputs together. http://tinyurl.com/8wmvy
http://www.datavis.com/images/VCAB/034405214007XL.gif
http://www.hometech.com/video/splitters.html#PI-DSU2
http://tinyurl.com/8y7rj
4-Way Splitter
RadioShack Catalog # 15-1235 => http://tinyurl.com/7jzzw

NOTE - Some may suggest that you use a Two-Way Splitter
that is connected to (feeds) two more Two-Way Splitters
to give a four way split of the Antenna's RF Signal.
2-Way Hybrid Splitter
RadioShack Catalog # 15-1234 => http://tinyurl.com/988w5

INLINE AMPLIFIERS :

ONE - A single (1) TV 'type' InLine Amplifier can be used
before the Splitters as a Pre-Amplifier to make-up for some
of the losses that result by using the Splitter.
http://tinyurl.com/aq78b
* 10 dB Broadband InLine Amplifier
http://www.cablestogo.com/product.asp?cat%5Fid=2402&sku=41002
* Bi-Directional Cable-TV Amplifier
RadioShack Catalog # 15-2505 => http://tinyurl.com/6u5yl

AT THE ANTENNA { MAST-HEAD} - Use an InLine Amplifier that
is located where the Wire Antenna Element is connected to
the Coax Cable Feed-in-Line or at the Mast-Head.
http://tinyurl.com/ceulh
* In-Line Signal Amplifier
RadioShack Catalog # 15-1170 => http://tinyurl.com/dfany
http://tinyurl.com/azuhj

MULTI - Instead of the individual Splitters and a Pre-Amplifier;
a Multi-Output Amplifier can be used with a Single Input
and two to four (2-4) Outputs.
* Multi (4) Output Broadband InLine Amplifier with 3 dB Gain
http://www.cablestogo.com/product.asp?cat%5Fid=2402&sku=41004
* 1-to-4 Bi-Directional Cable-TV Amplifier
RadioShack Catalog # 15-2506 => http://tinyurl.com/6vpob

MORE THINGS TO LOOK AT :
http://www.ramelectronics.net/html/rf-cable-satellite.html#amp
http://www.summitsource.com/antennas-accessories-c-47.html?ref=3

REMINDER :
All of what is being suggested here is a set in the right
direction from where you were going by directly wiring the
Radio's Antenna Inputs together.

hope this helps - iane ~ RHF

I'm sure you can buy reels someplace on the net. This would be a google search. I left out Akai also in terms of surplus machines, though Teac models would seem to be the most popular. Here is an Akai for sale at probably 3x the flea market price
http://www.randallareed.com/Reel_to_Reel_Tape_Decks.htm

Personally, I think reel to reel recorders are a waste of time and money as recording on the PC is much easier. Further, you can enhance the sound digitally with programs like Soundforge. [Now much cheaper since Sony bought the company.]

As an example, here is a "raw" recording of a navigation beacon:
http://www.lazygranch.com/sound/beacons/ak341raw.wav
Here it is after enhancing in sound forge:
http://www.lazygranch.com/sound/beacons/ak341.wav
Here it is noise gated.
http://www.lazygranch.com/sound/beacons/ak341noisegate.wav
I didn't like the noise gating, but sometimes it can make listening a bit easier on the ears.

For military air recordings, I filter out the 400Hz and harmonics that are often present.

In the days, I would have given my left nut for a Revox. Now, who cares. Even the DAT is dead. The market has gone to hard drive recorders and solid state recorders. [DAT is truly a pain in the ass.]

About the only "audio box" I think worth buying to aid recording is a DBX compressor/expander. [Actually, the dBxlimiters would do the trick if you really want to do it on the cheap.] These go for cheap on ebay since digital recorders don't need limiting (or companders) like reel to reel required. When you record shortwave, the audio level can be all over the map. Compression helps a bit. In theory you can do compression in Sound Forge after the fact, but I get better results with a hardware compressor.

I noticed you are on web TV, so do I assume you don't have a PC? In that case, I suppose reel to reel would be useful. You pay more for machines that take the 10.5 inch reels as that was "studio" gear, even though consumer grade machines used the larger reels.

It's too many years ago to recall the model, but there was a 70's era Magnecord that had continuously variable playback speed. In fact, you could shuttle the tape back and forth with a knob. That would take a bit of googling to find the models that had that feature, but I'm sure someone on the net has the details.

My old dad has the MFJ-422c Paddle. I tried it out. It will take me some time to get use to this. And boy is it heavy. I notice the sound changes pitch by itself after you playing with it for a while. I am not sure why.

The 2 plastic triangles that you touch can be slippery to the finger.

It does look more complicated to adjust. I wonder how close the prongs (I call them) have to be to the touching part. I wonder if this model is original or are their other variation of it?

And I wonder if this unit can plug into a radio? In the back the unit says Direct, Grid Block & Weight. Not sure what that mean?

BTW my old dad is a grouch, and he thinks a real ham goes the paddle way. We argue a lot because I like the straight key better. LOL!

A few of the old Reel to Reel (mostly those used in Studios) can
accept 10.5 inch reels. Those can give you about 4l hours at
reasonable quality (3 3/4 IPS) on Mylar based 1 mil tape. Otherwise
you tend to be forced to run a 1 7/8th IPS on reel to reel, and that
ends up a long way short of High Fidelity.

Whats Happening Also is that threads on the Messageboards are
constantly being spammed by tysia and Albert (HITLER and his PET
Aligator mate) wanting to talk about themselves and that pushes out any
others postings about the subject thread

this ploy is called dumping

this is used as a form of censorship spamming to push others comments
off the board and these posts will be removed

Thanks for saying that. This is exactly what these two selfish loons
are doing.
I have posted several items items but thse have been pushed off the
BOARD by those who want no exposure for an alternate view.

Boy YOU KEITH are a sucker !!!

You can't just use this TV stuff without checking the specifications. A lot of it won't work or will work poorly on SW frequencies. Some of it will work OK.

You can also run into problems connecting these old tube type radios together as some have hot chassis. Some of the radios RF inputs may not have BALUNS or one end of the input BALUN may be the chassis so you would have to make sure all the radios are connected to hot and neutral the same way.

You might also have a problem with solid state RF amplifiers and these radios.

Telamon - Everything that you say can be true.
But the original post was going to Directly Hard
"Wire" all the Antenna Inputs Together,
as his first option.

To Quote Myself - "Not the best answer and
consider by most to be a poor answer."

Hopefully this gets the 'questioner' to consider
several other Options to Methods of trying to
accomplish the objective of having a Common
{Single} Antenna Input for All his Radios.

Source record: 44683

Jason [RF Junkie],

Wire Antenna Element s :
Five Foot (5') Long -=V=- Fifty Foot (50') Long
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5845

Agreed a simple Five Foot (5') piece of Wire can not provide
as much RF signal Levels as a Fifty Foot (50') piece of Wire
fed into the same Feed-in-Line and Radio. Doing a side-by-side
between the two pieces of Wire. This would simply be logical
since 50 is Ten Times as Big as 5; an Order of Magnetude of 1
(10^1).

Five Foot (5') Long Wire Antenna Element :
* With the Largest (Strongest) RF Signals from the 5 Foot piece
of Wire we would expect to have just enough Signal for our Radio's
to Amplifiy and be Heard above the basic Noise Levels.

* With the smallest (Weakest) RF Signals from the 5 Foot piece
of Wire we would expect NOT to have enough Signal for our Radio's
to Amplifiy and be Heard above the basic Noise Levels.

Fifty Foot (50') Long Wire Antenna Element :
* With the Largest (Strongest) RF Signals from the 50 Foot piece
of Wire we would expect to have more than enough Signal for our
Radio's to Amplifiy and be Heard Easily above the basic Noise
Levels.

* With the smallest (Weakest) RF Signals from the 50 Foot piece
of Wire we would expect to have enough Signal for our Radio's
to Amplifiy and still be Heard above the basic Noise Levels.

All Things 'except' the "Length" of the Wire Antenna Element
being EQUAL. [Plain Wire - No Amplifier Required !]

Having Said All Of This . . .

* The Shortwave Listener who has "The Space" for some sort of
Fifty Foot (50') Wire Antenna Element can expect reasonably
very good results listening to their Radios.

* The Shortwave Listener who is "Limited" in their Space and
can 'only' have a Five Foot (5') Wire Antenna Element can still
expect moderately good results listening to their Radios.

one and all - enjoy listing to your radios - iane ~ RHF

= = = "rfjunkie" <kg7ro@j...> wrote:

You might be able to make the antenna work better with a
different balun but the laws of physics are still keeping
it from working "very-well". This being an passive antenna
and only 5.5ft long has its limits of how sensitive it will
be at SW and MW bands.

This is because the electrical wavelengths or SW and MW bands
are many times greater than a 1 to 2 meter rod.

You might be able to make it look good on the SWR bridge
or network analyzer with the correct matching parts but
so is a resistor connected to an RF connector.

It will probably end up being 5 or 6 S-units down from
a longwire antenna with a balun attached.

If you attach a good RF preamp at the antenna terminals
that has excellent IMD overload characteristics such as
one made with a 2N5109 transistor, you might be able to
have a good combination here.

I am not a fan of using preamps, but in some cases they
can work, if the amplified noise doesn't kill your signal
first!

Most of these pocket scanners that have Shortwave reception
will probably work better using this antenna as they are
sensitive enough to overcome this loss. Actually, many
are so sensitive that a good strong signal will cause much
intermod in their front end RF circuits. But in the end,
any loss that happens on the antenna side also effects
your signal to noise ratio and you may end up listening
to more noise than signal!

Many that say 5-900 mHz or whatever actually work well below 5 mHz.
They are labelled that way because CATV systems usually don't go below
5 mHz.

The transistor should act as an impedance convertor to match the Hi-Z
antenna to the Low-Z feed line.. The short antenna should be less
than a quarter wavelength at the highest frequency of interest.

Reel to Reel tape recorders a waste of time and money? I don't think so!
By the way,I got an email from Kovel's Online this morning.(I have been
registered at Kovel's since Febuary 1,2001) Their new book is on the
market now.Kovel's Antiques & Collectibles Price List.$19.95.And if you
order now,Kovel's will also send you a 16 page leaflet,,,,
Fakes,Fantasies,and Reproductions,FREE.A great value if you ask
me.Kovel's is THE Bible concerning Antiques and Collectibles.

Apparently as an attorney, since you seem so willing to speak as an
unelected representative.

I, unlike you, would like to find out what really happened, who shares
the blame with the Mohammedans, and who we have to lock-up to keep
this kind of shit from happening again.

You, on the other hand, are afraid that you'll find out that the
people you trusted are the guilty ones and that you'll lose a little
face.

David,

That is true and a side advantage of having an RF Signal Reduction
starting about 2 MHz to 5 MHz is a lessening of AM/MW Broadcast
Band interference and images in the Shortwave Bands. Sort of a
build-in Low Frequency (AM/MW) Band Attenuation Filter.

One of my Home Built Antennas that always amazes me is a very simple
Low Noise Inverted "L" Antenna :
* Laid-out East-to-West <Tip-to-Tip>
* Fifteen Foot Vertical-Up-Leg with a Thirty Foot Horizontal-Out-Arm
* Wire Antenna Element = 50 Strands of #41 Litz Wire = 20 AWG
* TV 'type' 300 Ohm to 75 Ohm Matching Transformer
* RG6 Coax Cable Feed-in-Line 25 Feet Long

NOTE - One of the 300 Ohm Input Leads is attached {Ground} to a Ground
Rod; and the other is connected to the Litz Wire Antenna Element.

OBTW - I have a 'tiny' Ferrite Binocular Core from one of those
TV type Matching Transformers that I "Re-Wound" with Nine (9) Turns
and Three (3) Turns of Magnet Wire; but still have not got around
to trying it on this Antenna - Ah One of These Days ! :o)

FWIW - Many times this TV Parts Antenna 'hears' what my other
Home Brewed (Do-It-Yourself) Antennas can not :

* N<>S Low Noise Inverted "L" Antenna - 25 by 75 Foot
#14 AWG Stranded (19) with a RF Junkie "SWL-1" 10:1 MLB
and RG8 Coax Cable Feed-in-Line
.
* N<>S Shield RG8 Coax Cable Single Turn Loop Antenna
with a 13 Foot Circumference (in the room)

* E<>W Shield RG6 Coax Cable Inverted Triangle Loop Antenna
with a 30 Foot Circumference (hanging from the eaves)

iane ~ RHF

About four years ago,I saw a Possum in my back yard.I went and grabbed my camera (Kodak Advantix F600) and I took a few pictures of that little Possum.When I got around to getting all the pictures developed (they weren't all Possum pictures in that film cartridge) at the Wal Mart store,I sent a couple of pictures (along with some other pictures) of that Possum to that married Irish woman wayyyy over yonder across the big pond.There is a wooded area catty corner across the road from me,I guess there are some Possums over there.Possums are my Heros.

I think that 30 year old tall brunette woman next door to me had a couple of her boyfriends over there last night.I saw two Oldsmobile cars (three actually,she drives an Oldsmobile too) parked on the grass right up beside my house last night.At about 3:15 PM last night,I was out in my front yard with my dog for a couple of minutes and when my dog and I got back in my house and I took her dog collar off of her,,, I went and looked out my front bedroom/junk room window and I saw a guy had just gotten into his Oldsmobile (she drives a white 1992 Oldsmobile Cutlass Supreme car,the windshield on her car has a couple of cracks on it) car and started it up and backing off of the grass by my house and onto her driveway.He was heading North on the street I live on.A few hours ago,I noticed her Oldsmobile car and that other Oldsmobile car are gone.The 37 year old Bell South woman whom is buying that house next door to me and fixing it up,her late model Saturn car is parked on the grass right by the side of my house.She is in Natchez this weekend,singing at the Blues and Biscuits Restaurant.(but really,I have never heard her singing before and if y'all ask me,she doesn't have much of a singing voice at all) She went to Natchez in her sister's Ford Ranger pickup truck.She will be back in Jackson tomorrow,late afternoon/early evening because she has to pick up her sister at Jackson International Airport.Her sister went to Houston,Texas. (not to be confused with Houston,Mississippi,,, our Houston,Mississippi is much better than Houston,Texas. www.555us.com

randi rhodes is a COMMIE C..T! OK,why did I phone home to my sisters daughter when I was at a H.E.B.food store in San Antonio,Texas.Because I asked her to Western Union me some money for gasoline so I could get my ass back home to Jackson from my visit to Mexico.Want to know what the sekert words were? Blue Dodge Van To Mexico.Of course,I paid her back the money when I got back to Jackson.

Source record: 44740

Very good reception of Radio Netherlands on:
17,810 - S6
17,735 - S9
17,660 - S9
15,315 - S9

Germany on 15,520 better than usual.

Much more on the 11, 13 and 15 MHz bands today than usual. Many stations
with auroral flutter.

17735 and 17660 are especially loud and clear here at 2015 UTC, (S9+
SW corner of Michigan) but unless Radio Netherland is broadcasting two
completely different programs on those two frequencies (and they may
well be), 17760 isn't Radio Netherlands - the other two frequencies
match 17735.

Tony

Apparently my reply was swallowed in cyberspace. The ITU divides up the world into regions CIRAF (I dont know what that means) but the international telecommunications union assigns numbers to your geographical region.'

When ILG and others do their SW charts they determine what (ITU CIRAF) region the target of their signal is. I am 8 so anything targeted towards me and I receive it means it's an EASY SIGNAL.

A CIRAF number in the 50's iirc is North africa. If I can receive a signal ILG says is shooting to North Africa, that is a coup

yodar

Way back when, dad put up a tri-band beam on a ten foot tripod atop the two-story building we lived in. Being a former merchant marine, he insisted on overdoing *everything*. He reinforced the tripod, he guyed it nine ways from Sunday, he used thick-wall plumbing pipe as mast, you name it, he overdid it.

A few weeks after we put it up, his sister died and we went to NOLA for the funeral. While we were gone, there was a storm here with sustained winds well over 60 MPH and gusts said to have hit the hundred mark. Before I tried to use the antenna, we went up to inspect it. There wasn't a TV antenna still standing as far as the eye could see; several chimneys were downed, lots of formerly healthy trees and lots of heavy tree branches.

The sum total of our damage? The beam rotated 15 degrees on the mast.

Oh, I assure you reel to reel is really really really really dead. An exception would be archive work. Even the cops have solid state recorders for their repeater traffic.

Collectors will collect just about anything. That doesn't mean what they collect is useful. I've got electronics gear that hasn't seen power in probably a decade, but I keep it for my collection. Dumb stuff like a real telco blue box, bridge impedance meters, and other useless stuff. I'd never advise anyone to collect what I collect.

For many it's not obvious. So you'd prefer they have less information since
you either know it all or don't care.

> Then again, I'm more interested
> in substance over symbolism,

Then you certainly wouldn't like Bush.

which is the exact opposite of the "touchy-
> feely" emotional drama that appears so prevalently among the MSM.

I'd say thaqt a middle class person had more resources than a lower class
person and would have better means to leave the area or provide for ones
self.

You could cover the same distance by going forward in a straight line, but no,
you continue to go in circles.

You're just one of those folks who's stuck on stupid and locked on dumb.

> match 17735.

I listed 17,660 above not 17,760.

Radio Netherlands is usually running the same program on all four
frequencies I listed above. Several frequencies are relayed from the
same site but all have slightly different delays as heard from my
location in southern CA. I have several radios on different antennas and
usually have more than one on at a time.

Late afternoon and early evening my time I have better then usual
reception of the middle east, which is hard for me to get. This is a
very good propagation day. Hopefully this will continue tomorrow.

TC - Welcome to the Club !

Yes it si a built in Manufacturing Defect that takes about
5-7 Years to show up. A combination of the pinch fit of the
Plastic Gear and Metal Shaft and the type of Petroleum Gear
Lube that was also used on the Gear Train. Over Time "POP"
the Plastic Gear just splits on the Shaft and the Thump,
Thump Thump begins as you turn the Tuning Knob : a spin bump,
A Spin Bump. A SPIN BUMP !

PS - I have five of these GE World Monitors Model # 2990 Radios
and only one does not have the Tuning Knob problem.

I also have the Panasonic RF-2800 and RF-2900 plus two of the
RF-2600 Series Radios.

The GE World Monitors Model # 2990 Radios sort of kind of look
like the Panasonic RF-2800, RF-2900 and RF-2600 Series Radios;
and they were Made-in-Japan. But the Panasonics were (are)
a much better Radio.

gee - i be monitoring the world and modeling on ~ RHF

http://www.grundigradio.com/US/support/shortwave_101.aspx?index=4

Understanding Shortwave Bands

The Key to Successfully Using Your Shortwave Radio
What is Shortwave?
Now that you have a shortwave radio, no doubt you'll want to hear worldwide stations right away. What is shortwave? What will you hear? Shortwave is a broadcast frequency range that allows stations' signals to be heard over vast distances, usually thousands of miles. You'll hear news and information along with culturally oriented programming, sometimes including music. The programming may or may not be biased or propagandized.
If you're new to shortwave, please take some time to learn the basics outlined below. To successfully listen to shortwave stations you must know how to find them. They are found in the shortwave bands. If you're an experienced shortwave listener, you'll know what bands are and how to use them, but if you're new, you'll need to learn about bands first. After that you will have excellent success. Please read on.

Some Basic Rules of Thumb

* Night shortwave reception is usually better than daytime shortwave. This can change from time-to-time, so it's worth checking the bands during the day as well.
* Shortwave is usually better in the winter than other times of year.
* Typically, the best daytime shortwave bands are 13, 15, 16, 19, and 22 meters, 16 and 19 usually the best. At night, the best bands are 25, 31, 41 and 49 meters, with 31 and 49 usually best.
* Around sunset and sunrise, both the day and night bands may often be exceptionally good,often making listening at these times quite rewarding.
* Because the construction materials of some buildings severely block shortwave signals, it may be best to hold the radio in your hands and get very close to a window or use an external antenna mounted next to the window or outside.

What are Bands?

This is the most important concept to learn right away. If you have ever listened to AM or FM radio, then you already know what a band is. In North America, the AM band is a frequency range stretching from 530 to 1710 kilohertz; the FM band is 88-108 megahertz. A band is a frequency range where stations are located. When looking for stations in these 'bands', you will tune around with the tuning buttons (or the tuning knob on an analog

radio) until you find a station you like. Shortwave is similar and the shortwave bands have names like 25 meters, 31 meters, 49 meters, etc. These are abbreviated 25m, 31m and 49m. Just like in AM and FM radio, one simply gets into the shortwave band and tunes around, looking for stations.
Each band represents a frequency range, as shown in the band chart below. For example, the 19 meter shortwave band encompasses the frequency range of 15100 to 15600 kilohertz. Since some radios show frequency in megahertz (MHz) and some in kilohertz (KHz), both are shown here. Look at your radio's tuning scale or its digital display to determine which frequency designation it uses in shortwave. On some shortwave radios these frequencies will look like 15100 KHz, 15105 KHz or 15110 KHz and on other radios they might look like 15.1 MHz, 15.105 MHz or 15.11 MHz. The exact frequency ranges for these bands may vary somewhat from one radio model to another. This is perfectly OK. On some radios the band names, e.g. 19 meters, are clearly marked, on others they are not marked at all. If it is not apparent how to get into a band on your radio, consult the owner's manual.

A Helpful Analogy About Bands
A shortwave band is like a street with many addresses on it. In this case, the individual addresses are called frequencies, each one a potential home of a broadcaster. For example, in the 19 meter band (it could be called 19 Meter Street), 15110 kilohertz is the home of Radio Spain International, 15190 is the home of BBC World Service and 15275 is the home of Deutsche Welle (Germany). As on any street, the occupants at a specific address are not always at home.

Day and Night Bands
Shortwave Band Chart
BAND MEGAHERTZ (MHz) KILOHERTZ (KHz)
120 m 2.300-2.500 MHz 2300-2500 KHz
90 m 3.20-3.40 MHz 3200-3400 KHz
75 m 3.90-4.00 MHz 3900-4000 KHz
60 m 4.750-5.060 MHz 4750-5060 KHz
49 m 5.950-6.20 MHz 5950-6200 KHz
41 m 7.10-7.60 MHz 7100-7600 KHz
31 m 9.20-9.90 MHz 9500-9900 KHz
25 m 11.600-12.200 MHz 11600-12100 KHz
22 m 13.570-13.870 MHz 13570-13870 KHz
19 m 15.10-15.80 MHz 15100-15800 KHz
16 m 17.480-17.90 MHz 17480-17900 KHz
13 m 21.450-21.850 MHz 21450-21850 KHz
11 m 25.60-26.10 MHz 25600-26100 KHz

Day Bands vs. Night Bands
Because shortwave signals depend on such factors as the sun, the ionosphere and interaction with the earth itself, signals cannot be heard on all bands throughout the day. Some bands are best during the daylight hours, and some are best at night. In general, the bands with frequencies below 13 MHz (13000 KHz) are better at night and the bands with frequencies above 13 MHz (13000 KHz) are best during the day.

Sunset and Sunrise - Often the best time to listen.
This is when shortwave signals are often strongest and clearest, during a window of time around sunset and sunrise. Sometimes it's a two-hour window, at other times three or four hours. Experiment to determine when it's best in your area.

Daytime Listening

Shortwave listening is generally at its poorest during the daylight hours of about 10 a.m. to 3 p.m. The major reason for this is that the broadcasters are not transmitting to regions at this time, assuming that we are all either at work or at school and are not able to listen during the day. In North America, daytime shortwave tends to be best in the East and Midwest.

The day bands are 13, 16, 19, 22 and 25 meters, often with 16 and 19 being the best. In the summer, these bands may stay open into the evening hours.
Evening/Night Listening
This is the best time to listen, because the broadcasters are deliberately transmitting to you, wherever you are, at least up to about 11 pm. These bands may be extremely good around sunset and sunrise too.

The night bands are 25, 31, 41, 49 and 60 meters. In the winter, these bands produce results earlier than in the summer months, often starting around 3 pm on 25 and 31 meters and 5 pm on 41, 49 and 60 meters. In the summer these bands start later, around 5 pm for 25 and 31 meters and around 7 pm for 41, 49 and 60.

IMPORTANT NOTE: Getting close to a window may substantially improve reception. Shortwave signals penetrate single-level wood frame buildings easiest, while concrete and brick buildings, multi-story and metal roofed structures often block signals. In such situations, position the radio as close to a window as possible. Holding it may also help. Use an external antenna if necessary.

Shortwave Directory

We recommend the use of a comprehensive shortwave directory, especially to seek specific countries or to determine what you're listening to. Such a directory lists the countries broadcasting on shortwave, showing their language, target area, broadcast time and frequency that is used. A frequency-by-frequency listing helps to determine what is being heard. The two such directories listed below are found in major bookstores, on-line bookstores and from the antenna retailers noted later. These and other ources of shortwave broadcast information can be found via your favorite search site by searching for 'shortwave broadcast schedules'.

PASSPORT TO WORLD BAND RADIO, published by International Broadcasting Services (IBS).
WORLD RADIO TV HANDBOOK, Published by WRTH Publications, Ltd.
Shortwave Antennas
An external shortwave antenna, especially when mounted outside, can greatly enhance reception. If your shortwave radio has an antenna socket, professionally engineered antennas can usually be used. et�n Corporation

does not manufacture or sell shortwave antennas, however, there are many excellent models available to significantly enhance your shortwave reception.

NOTE: When ordering any antenna, let the retailer know what radio it's for and that you want the proper plug fitting or adaptor installed on the coaxial cable for your model, or else the antenna's coax cable won't plug into the radio's antenna socket. This may cost a few dollars more, but it's well worth it and saves you time if such fittings and adaptors are not available from a local store in your area.

Full-Sized Passive Shortwave Antennas

These normally give the best performance. Generically they have names such as dipoles, trapped dipoles, parallel dipoles and slopers. They are characteristically fed with 50 or 75 ohm coaxial cable that leads to the radio's antenna socket. Even when built from instructions in a book, such antennas are an 'engineered system', thus optimizing performance.
Active Shortwave Antennas (usually small)
Active antennas are much smaller than others and employ the use of amplifiers to compensate for their small size. There are many models to choose from. They usually do not perform as well as passive or non-amplified, professionally engineered models but are useful when a short, small size is needed.

Shortwave Antennas for Use on Boats
RF Systems makes the model MARINE BALUN KIT (about $90 USD), which can turn a backstay or a long piece of wire into an efficient shortwave receiving antenna. McKay Dymek makes the model DA-100EM (about $200 USD), mountable on a mast or railing, the antenna being only about 1.5 meter high (4 ft. 8 in.).

Long-Wire Shortwave Antennas
If your radio does not have an antenna socket, or if you want to take a simpler or less costly approach, this type of antenna can improve signal levels. Understand, however, that this not an engineered system and noise levels may still be quite high. Such antennas are attached directly to the radio's telescopic antenna with an 'alligator' clip or other secure attachment device.

AM Antennas

We are often asked about AM antennas. Such antennas, usually AM-Loop antennas, are made by a variety of manufacturers and often work extremely well to boost signals. One brand, Select-A-Tenna, is a time-proven performer and includes models ranging from about $60-$200.
Finding Antennas

One way to find antennas is by performing a search on the Internet. The following retailers are known to sell such products:

* Universal Radio,
www.universal-radio.com.

* Universal's antenna page,
http://www.universal-radio.com/catalog/sw_ant.html.
Phone, 1-800-431-3939.

* Amateur Electronic Supply (AES),
www.aesham.com.
1-800-558-0144.

* Ham Radio Outlet (HRO),
www.hamradio.com,
1-800-854-6046.

* Radio World (Canada),
www.radioworld.ca,
416-667-1000.

* Durham Radio (Canada),
www.durhamradio.com,
1-888-426-1688.

Time Stations
These stations broadcast Universal Time (GMT), usually 24 hours per day.
CHU-time(Canada) 3330 Best at night
CHU-time(Canada) 7335 Day/night
CHU-time(Canada) 14670 Best during daylight
WWV-time/weather(US) 2500 Best at night
WWV-time/weather(US) 5000 Best at night
WWV-time/weather(US) 10000 Day/night
WWV-time/weather(US) 15000 Best during daylight
WWV-time/weather(US) 20000 Best during daylight

Hello - One and All,

* * * IT"S SOAP BOX TIME * * *

It is nice to Read All of Your Shortwave Reception Reports :o)

And I Am A "KNOB SPINNER" - So "When I Read The Reports"
I usually 'Tune' a Shortwave Radio and try and see if I can Hear
what you have Heard Too - Right 'here' in the SF Bay Area :o)

IMHO - It Would Be Nice - It Is Good Form to Give a

" POINT - OF - REFERENCE " !

Posting Shortwave Reception Reports to the NewsGroup
? WHO You Heard ?
- ID of Station /Broadcaster
- Maybe Program Content (What?)
- Frequency(s) ?
? When You Heard It ? { Time Heard ? UTC = GMT }
? Quality of Signal { S-Units / RST Report / SINPO Code }
? Where You Are ? { Point-of-Reference }
+ What Radio / Receiver was Used ?
+ How ? = What Antenna Used ?

" POINT - OF - REFERENCE " !

. . . and 'here' is ? ? ?

Here Being : City & State & Country

-or- Metro Area / Geographic Region

Latitude and Longitude is so High Tech
. . . but my old brain understands both
the traditional : City & State & Country
-or- Metro Area / Geographic Region
much better when I read them :o)

Please Give a Point-of-Reference :o)

* * * End of Rant * * *

a point of reference - it does help us all
with the sharing of info ~ RHF
.

DaviD - If 'you' want to get at the Truth Why 9/11 Happen . . .
The Review what the so called "Church Committee"
{Select Committee to Study Governmental Operations}
did in the 1970s. The is the beginning of the foundation
for what happened on 9/11.

The House and Senate Intelligence Committees both have independent
access and review of US Intelligence Information that is 'separate'
form the White House. This is the very system that Congress
'designed' and Funded (Under-Funded). In reality the roots of
the US Intelligence Failures go way back to Senator Frank Church
and the so called "Church Committee" {Select Committee to Study
Governmental Operations}

A BIT OF HISTORY:
The Real Roots of the current Problems in the US Intelligence
Services began in 1975. In 1975, Senator Frank Church (Idaho-Dem)
became the Chairman of the Select Committee to Study Governmental
Operations with Respect to Intelligence Activities. This committee
investigated alleged abuses of power by the Central Intelligence
Agency and the Federal Bureau of Intelligence.
http://www.spartacus.schoolnet.co.uk/USAchurchF.htm
http://bioguide.congress.gov/scripts/biodisplay.pl?index=C000388
NOTE: This occured under President Ford who replaced Nixon.
FWIW: It was President Jimmy Carter who really built the
"FireWall" between the FBI and CIA.
TBL: Every Congress from 1975 to "9/11" has underfunded the
Domestic Intelligence Services and continued to foster a Legal
'disconnect' between the FBI and CIA.
Final Report of the Select Committee to Study Governmental
Operations with Respect to Intelligence Activities of the
United States Senate, 94th Congress, 2nd Session, 1976:

Reel to reel sounds like fun. I've always wanted one. Is it possibble
to record cw and play it back at a slower speed? .....

Sure. But you can also do that using windows sound recorder.
Also, as mentioned, you can get software to decode it in real
time, or....maybe I'll let you rent my brain if you really want
good copy... :/ Not sure what to charge for that service though... MK

2445. Re: The Old Tape Recoder

Newsgroup: rec.radio.shortwave

Source record: 44607

When I tune into CW on SW, often I drop the pitch. Now I realize that
if I am going to record cw to then play it back at a slower speed, then
I might have to record the cw at a higher pitch. Unless the reel to
real recoder has a pitch button.

Nope...or mine don't anyway...

Then their is the radio drifting problem as of lately on 75m.

uh oh...Time for a better radio.... :(

And sometimes the 2nd persons who is transmitting cw, might be at a
whole different pitch. In fact that may not be a bad idea because it
helps identify the other person. Sometimes I wonder if this is normal
practice. Are cw ham stations suppose to be at a certain pitch?

No. When working CW, you tune the pitch to suit your ear. The average
listening pitch will be appx 600-1000 cycles, depending on preference.
The radios usually have a built in offset, so both can hear each other
at the same appx pitch. Most radios also have a "RIT" which will
let you fine tune the rcvr, while leaving the xmit freq the same.
"XIT" is the opposite... Moves xmit, and leaves rcvr as is...

Also, is it possible to tell if the cw transmission is by a straight
key?

Sure...Sticks out like a sore thumb to me....Well, unless they are
super
clean and even... I use an iambic keyer, and a bencher paddle.
Makes perfect characters.

It would really be fun to copy cw at a slower speed. Sometimes it is
hard for be to find someone transmitting at 5-10 wpm. It seems most
are
above 10 wpm.

You can thank the present state of ham radio for that. Being as most
clamour for "no code", it is being slowly dropped from the ticket
requirements, and thus is slowly falling off. The "novice" sub bands
used
to be the place to hang for slow code, but it's getting so slow there,
you are lucky to find anyone to listen to. Those bands used to be jam
packed until the novice 10m phone band came along. After that, many
novices jumped to 10m fone, and dropped code on the lower bands.
The no-code tech's also pretty much ignore, unless they are looking to
learn code.

And then their is RTTY, I am not too sure what that is. My Icom R75
has
some kind of feature for this. I looked up RTTY in the book "Now Your
Talking" in the glossary, but still I am not too sure what is it. But
I
will do some googling on this.

RTTY is radio teletype. You can copy it with the same free software
usually used for PSK31, etc...Ham scope will work as an example
if you install the MM rrrty engine. The best place to listen to RTTY
is probably on 20m. "14 mhz". Try the 14.080 area, + or -.... RTTY
sounds quite a bit different than PSK31... No problem telling which is
which once you know the sound.
The best place for slow CW is still the novice sub bands, but you gotta
look harder than in years past. I remember even in the 80's, the 80m
novice band used to be so crowded you couldn't find a place to sit.
Now? It's a barren wasteland... No problem finding room to sit... :/
Heck, I can get on there if anyone is really interested in practice.
Just let me know, and we can set a sked... You'll need a tech +, or a
novice ticket to use those novice bands.
MK

2447. The "Almost" Delta Loop Antenna for Limited Space Shortwave Listening (SWL) made from TV 'type' Parts

Newsgroup: rec.radio.shortwave
Date: 2005-10-16 11:34:14 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129462454.546265.84860@g43g2000cwa.googlegroups.com>
Source record: 44609

For One and All,

The "Almost" Delta Loop Antenna for Limited Space Shortwave Listening
(SWL) made from TV 'type' Parts
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5856

Another TV 'type' Parts Shortwave Listening (SWL) Antenna
that seems to work in Urban High Noise Areas is the 'Almost'
Delta Loop Antenna made from 300 Ohm Twin Lead.

THE "ALMOST" DELTA LOOP ANTENNA:
Delta Loop { Inverted Equilateral Triangle } Antenna.
The Three (3) Sides of the Triangle are all the same
Length : Top = Left = Right

TYPICAL ANTENNA LOCATION :
These are a good limited space Shortwave Listening (SWL)
Antenna that "Fit Well" along side a House when Hung
Under the Eaves using 24 Foot Delta Shape with three
8 Foot Sides

WHY AN "ALMOST" A DELTA LOOP ANTENNA :
Almost because it is not quite a Loop but two Parallel
Opposing Wires in a Loop (Circle-Square-Triangle) Shape.

WIRE ANTENNA ELEMENT AND SIZING :
The Wire Antenna Element is made of 300 Ohm Twin Lead.
The length of the Wire Antenna Element can be relatively
short, as little as 15 Feet = 5 Feet per side; normally
from about 24 Feet = 8 Feet per Side to 36 Feet = 12 feet
per side; or as big and long as 48 - 72 Feet.

WIRING THE TWIN LEAD ANTENNA ELEMENT :
* Match-Up the Ends of the piece of Twin Lead and trim back
about an Inch of two of the Opposite Opposing Ends; these
are your Dead-Ends (Far-Ends and Antenna Tips).
* Next take the 'remaining' two Opposite Opposing Ends
and "Remove" the Insulation from about a Half-Inch from
the End of Each Wire.
* Connect (Solder) One Wire to one of the Matching
Transformer's 300 Ohm Leads; and connect (Solder) the
other Wire to one of the Matching Transformer's 300
Ohm Leads.

RIGGING THE "ALMOST A DELATA [TWIN LEAD} ANTENNA ELEMENT :
Use TV Wiring Stand-Offs (or Cup-Hooks) as the Top Two
Rigging Points (Corners) for the Delta Loop to hang from.
The Weight of the Coax Cable provides the Mechanical
Loading at the Bottom of the Delta Shape for the Loop.
If you want a short wooden stake in the Ground can be
used to hold everything in-place; or a Half-Pound Weight;
or may be both.

ABOUT THE "ALMOST" A DELTA LOOP ANTENNA :
This is actually a Folded Dipole Antenna (Balanced)
with the Arms of the Dipole Circling back on each
other in close approximation; the standard width of
the Twin Lead. A Ground is not required specifically
for this Antenna so the Shack's Ground for the Radios
and equipment as good or as bad as it is the common
Ground for this Antenna's Coax Cable Feed-in-Line.

MATCHING TRANSFORMER :
A 300 Ohm to 75 Ohm Matching Transformer is used between
the 300 Ohm Twin Lead Wire Antenna Element and the 75 Ohm
Coax Cable Feed-in-Line.

COAX CABLE FEED-IN-LINE :
The Feed-in-Line is 75 Ohm Coax Cable RG6 (RG-6) works well.
The Coax Cable 'hangs down' from the Bottom (Apex) of the
Delta Loop.

RESULTS :
This is not a great Shortwave Listening (SWL) Antenna.
However it does do several things for the Shortwave
Listener :
* Can be used in Limited Space like Under the Eaves
of a House or Hung on the Balcony of an Condo/Apartment.
Uses a relatively Small Area with a small Ground Foot Print.
* Gets the Wire Antenna Element OutSide the Building.
* Makes the Wire Antenna Element Longer than the Radio's
Whip Antenna. (24 Feet vice 2-4 Feet)
* Makes the Wire Antenna Element have a Bigger Signal
"Capture Area" than the Radio's very Thin and Short
Whip Antenna. (8 Foot Delta Area vice 1/4" by 2-4 Feet)
* Makes the Wire Antenna Element a Folded Balanced "Dipole"
type Antenna not requiring any additional outside Ground
Rods. A Folded Dipole of this size and shape that is this
close to the ground is an Omni-Directional Antenna and
exhibits some NVIS properties.
* Uses Low Cost TV type Parts which are readily available.
* Easy Do-It-Yourself Antenna Project that can be made
from common TV type Parts.

SOMETHING DIFFERENT - MAKE IT A CAMPING ANTENNA :
Bigger versions 48 to 72 Feet of this 'Almost' a Delta Loop
Antenna can be made and used as a Camping of Day-in-the-Park

Shortwave Antenna (SWL) Antenna and Rigged between two trees.

iane ~ RHF

David - For Shortwave Listening up to 30 MHz.

Using a 'short' Vertical Dipole Antenna (sVDA) as a Shortwave
Listening (SWL) Antenna in Limited Space 'situations'.
CenterFire Base Scanner 'type' Antenna
{ Multi-Band Vertical Dipole Antenna : 5 MHz thru 1200 MHz }
sVDA => http://www.centerfireantenna.com/scan.html

A 5.5 Foot Long Tip-to-Tip Vertical Dipole like this
would be less than a Quarter Wave Length (1/4 WL) Long

1005 / 30 = 33.5' = Wave Length (WL)
33.5' / 4 = 8.4' = Quarter Wave Length (1/4 WL)
Anternna is Less Than 1/4 WL = 5.5' < 8.4'

good lord and a quarter - iane ~ RHF

And if Bush didn't want the war there would have been no vote. Bush wanted
the war. He pushed for it, no one else. So every soldier that died was
because of him, no one else.

Here's what Bush's war has done to a once wonderful kid:

http://www.nj.com/news/times/index.ssf?/base/news-0/1129190989246630.xml&coll=5&thispage=1

Bush should be fucking impeached for doing this to the youth of America.

> traits that comprises the lie-beral beastie.

Without Bush there is no war. You even said so yourself a while back. Bush
can do whatever he wants. So that's what he did. You're just so upset that
he's fucked up so you need to share the blame with the party that's in the
minority. Are you so desperate in your argument that you blame the
minority for Bush's problems?

Think about that hard.

Using your logic, that Democrats approved of the war, since you approve of
Bush's war you are also saying that you liked the Democtrats for being for
the war. That's quite a bad situation for you. Becuase it's apparent that
you hate Democrats because they lie. Yet, you liked them. You like liars.
Yet you hate liars. Which is it jd? I think you are really confused. But
what you'll do next is just blame me for your confusion. Go ahead, do what
you always do, blame me for your inability to come up with a logical answer.
Go ahead jd. You know you want to.

Just refuting that all the information can be gotten becuse of the
voluminous images. There's many that live around the world that get their
information through shortwave radio. That don't get tv. Should we send
them tv's so they can see the images instead of taling about them?

You can pay for that, yourself. There are

And is mentioned the names of the ones where the shoe fits. But apprently
the point went way over your head, again.

>
>
>
>>> If you spin
>>> and/or omit significant facts because of your political agenda, would
>>> you call that being "truthful and forthcoming", or would you call it
>>> for what it is, which is purposefully deceptive (aka: Big Fat Liars";
>>> "Lie-berals")?
>>
>> Oh yeah, conservatives never lie. Uh huh. You're full of shit jd, and
>> you know it.
>>
>
> Did I say that conservatives never lie? No I didn't.

You keep referring to them as lie-berals. Conservatives lie too.But yo just
don't want to admit it. Go stick your head in the sand and keep repeating
lie-berals over and over. You get that smung moral superiority that
conservatives are known for. Buddy, your shit smells like the rest.

>>
>> Keep deceiving yourself that conservatives always tell the truth. Like

>> Nixon, and Bush and Reagan, etc.
>>
>
> You'll need to provide a direct quote where I stated, indicated or

> conservatives.
> You don't have a leg to stand on with this flawed, baseless, wild
> assumption
> of yours.

I'll refer to conservatives as lying conservatives in future discussions with you.

I'll start now. That lying conservative Bush told us about WMD in Iraq. He was a lying conservative when he spoke to the nation. His lying conservative friends supported him in Congress. The lying conservatives told us about how we'd meet little resistance once there. The lying conservative Bush declared Mission Adccomplished. The lying conservative Bush said he cared about the people of Iraq, but that was long after the other lying conservative Reagan helped sell arms and chemical wepaons to Saddam tha was used on the Kuerds.

The lying conservative Bush said he cared about the people of NO, after he cut the spending to the NO levee projects.

Yep, lying conservatives.

>>> I never said conservatives didn't exaggerate,
>>
>> They do more than that jd, but your too blind to see.
>>
>
> And you would stand corrected, yet again! (for the gazillionth time).
> Apparently, you didn't read ahead. Or, once you did, you were too stupid
> to
> go back and edit out your unfounded comments. Spank you very much! LOL!!

jd, the lying conservatives sent our kids to get killed for their lying conservative reasons.

>
>
>
>>> but I've seen and read far
>>> more consistent, and worse, examples available of lie-beral drama-queen
>>> deception, over-emoting and exaggerating from journalists. Besides, I
>>> don't consider Limbaugh a journalist. He is just another entertainer
>>> like Howard Stern is an entertainer -- nothing more or less.
>>> Entertainers are drama- queens by definition.

>>>
>>>

I reckon Jackson,Mississippi is rich then.We have storm sewers and ditches around here.The front edge of my front yard slopes downward to a grassy ditch between the road and my yard and I know there are lots of storm sewers all over town,there are manhole covers in the streets all over town.I almost ran into a big verticle concrete storm sewer "pipe" about three or four feet in diameter a couple of weeks ago on Morson Road when I was coming back home from the Goodwill store.The left rear tire on my 1986 Ford Crown Victoria LTD Pimpmobile car suddenly blew out.

Hi all I have a sick FRG-8800 rx got the dreaded Flashing LED and no o/p fault, searching the net found that it is a PLL problem and that there was a fix available but cannot find the fix.
Anyone still got the fix I believe it was a resistor change so the tunning of the PLL was not so crictical.

Regards Mark

I need an external frequency digital counter for my Hammarlund 180 ac.
I am looking for the type that all you do is connect the PL259 coax then
to the radio.

I need something that will cover at lease 3-30 MHZ.

I've owned a couple of them, and the tuning seemed very dry. A bit of light grease cured the problem and hopefully any breakage. The Panasonic radio geared tuning was not really designed for much more than periodic use at home. The knob assembly always felt a bit wobbly and not tight even on new ones.

I am Impressed by that "Rear Section" at www.jeepdraw.com She looks just like that 30 year old brunette woman that lives next door to me.I think she took yesterday off and is taking today off too because I see her 1992 Oldsmobile car parked in their driveway next door to me and the 37 year old Bell South woman's (she is in Natchez this weekend,singing at the Blues and Biscuits Restaurant,but trust me,she will never make it big time singing,she has guts though) late model Saturn car is still parked on my grass right up beside my bedroom window (she has a little black Cowgirl hat sitting on the rear seat of her car,I can see it from my window.I never go over there unless I am out in my front yard with my dog and I see them stirring around outside,my doggy,for some strange reason or the other,she doesn't like that 37 year old Bell South woman) and I haven't seen the 30 year old brunette stirring around over there all weekend yet.Maybe I ought to step over there and see if she is doing ok?

Shortwave is just a bit to tricky for him to get a handle on. Hence, he is reduced to picking a channel number on his Sirius "radio".

The antenna issues are probably much easier for the 'tard to figure out as well.

But you've got it hooked up to the local oscillator. Either you had
to add a jack for the counter, or it already existed (I don't know if
there was an oscillator out on the Super Pro, the one I had was the
diversity version that brought out all the oscillators to connectorson the
back).

He thinks he can add a counter to the antenna jack, which would only
work if the receiver also transmitted (and would only work when a signal
was being transmitted).

I think the broadcaster is required to put the target region number
in their request to their national liscensing authority and that just
gets passed on to whoever (the ITU?) publishes the list that's the
input used by the various private database publishers.

There's a map in the FCC regs on international broadcasting.
(47 CFR 73 subpart F). (I suppose I could read the instructions,
but reading the FCC regs is more than my mind can deal with right now).

The point being if you wish to continue to listen to International
Broadcasting you're going to have to add some equipment.

Just because you are old and set in your ways doesn't mean the rest of
us can't evolve.

I'm sure if you try real hard you can still find some Quenched Spark
CW purists.

From: David <rickets@knac.com>
Message-ID: <nh65l11p0l95sichlt0osimh7ku3akep8c@4ax.com>
Source record: 44842

o What is rec.radio.shortwave for?

As stated above this group was created for USENETers to have a place to discuss
the radio monitoring hobby. This group is not moderated, however 'serious'
arguments and any kind of flame wars are strongly discouraged. That is not to
say that genuine disagreement and discussion of differing opinions is not
welcome. We only ask that you keep the tone friendly, and in the spirit of
international cooperation upon which the hobby is founded.

This group is intended to be a place where ANY radio monitoring topic can and
should be discussed. We are happy to hear from posters who listen to any part
of the radio or microwave spectrum, from DC to daylight. We discuss topics of
almost any kind, ranging from (but not limited to) shortwave broadcasting,
DXing small or distant shortwave stations, utility and teletype monitoring,
military eavesdropping, station schedules, QSLing sw broadcasters, spectrum
usage, equipment design and modifications, antennas, receiver reviews and
recommendations, and many more.

Despite what the newsgroup name might imply, we definitely DO NOT limit
discussions to shortwave only. Any radio-related topics are welcome.
People interested in scanning VHF frequencies may find that the
rec.radio.scanner newsgroup more accurately reflects their interests, and
people interested in pirate radio may want to check the alt.radio.pirate
newsgroup, although this group seems to be more interested in building small
FM transmitters than in hearing distant shortwave pirates.

It's an extension of the old 14.313 and 75 Meters.
You see, ever since Hollingsworth kicked all the
fruitcakes off of 20 and 75 Meters they've had
no place to go and vent their steam. Usenet and
some blogs serve this purpose and fill this need
very well. Be glad, as the alternative is more of them
would be either drunk behind the wheel at night
or beating their wives as the alternative.

I did add a jack to the LO of the SP-600. There is an IF out jack on the SP-600 and it's hooked into my HC-10. To add a jack wasn't too difficult on the SP-600.

I think Brian Hill has the right idea with the counter from AADE but that still needs to be connected to the LO. They supply all the necessary info to make the connection (doesn't even require adding a jack). It would take some simple soldering skills.

Yep, you are right concerning his train of thought and also why such a set-up doesn't really exist.

what authors? the Congress adopted the declaration they did not write
the thing
The declaration was written basicaly by Tom Jerfferson with a bit of
input from Adams and Franklin

the Congress asked for and received a bunch of revisions all approved
by Tom, that is editing not writing

Your PLL assumption is correct. Usually it is temperature related -
remove the top cover or operate it in a co0ler atmosphere and it will
work again. I have tried some of the suggested fixes, including
resetting up the entire PLL section and checking the crystal is not
failing to oscillate.

Therefore I too am seeking the same fix.

Sellers remorse? Good one! I never heard of sellers remorse before,but I like it.That Bell South woman is back over there next door to me now.Back from Natchez,singing at the Blues and Biscuits Restaurant in Natchez (from hearing her talk,she sure doesn't have much of a singing voive,believe you me) and she stopped off at Jackson International Airport to pick up her sister whom had gone to Houston last week.I slept most of the afternoon.I noticed she has put that great biggggggg pile of old tree limbs that was at her back door out front of my house by my not so big pile of old tree limbs for the clean up crew to pick up whenever they get around to it.They are sitting in some chairs by the back door over there now,talking and laughing.I see that other woman's car,1992 Oldsmobile, is over there too,but I guess she is out with her boyfriend somewhere.

Certainly can, however remember the frequency of the CW tone changes
as well. If the tone was 1000hz at 3 3/4th, it will have the speed,
AND half the Frequency (500hz) at 1 7/8th

Hey,that's the ticket! Use your cell phone to send Shortwave to anybody in the World.I would like to find a way to send the DirecTV programs I get to that married Irish woman wayyyy over yonder across the big pond,with real good video and audio.Not with a cell phone though,because I don't own a cell phone.

It is a place where people who want to talk about everything OTHER than shortwave radio or HF post the mosr inane, INSANE, childish drivel ever known to man, on an antiquated place in the Internet universe called USENET that has seen it's day a LONG time ago.

You really want to learn about and discuss SW and HF?

Go to the world wide web, where intelligent forums at places such as Strong Signals, Radio Reference and the YAHOO groups are moderated.

If you want to read sputem from borderline inbred retards such as CUHULIN, stay here.

One of my big reel to reel tape recorders is a three speed reel to reel tape recorder.I once saw an ad in Thrifty Nickle about twenty years ago about a guy whom was lookng for just such a three speed reel to reel tape recorder.Of course I ignored that ad,I don't get rid of my old things.I also own some small reel to reel tape recorders,some of them date back to the 1950's and 1960's.Later model G.E.and Panasonic cassette tape recorders show up at the Goodwill store every once in a while.

To everyone regarding the SX-117.
I attempted to listen in to ECARS during the week, and could not find them. When I found them on another radio, I looked into it. CHU was off in frequency by a good amount...more than what the display calibrator could correct for. I'm sure it is just that routine of adjusting a coil at one end of the band, and a cap at the other end...back and forth, back and forth. But, I am going to send it to WA8SAJ for the task...and whatever other magic he routinely performs.
It'll be back!

You mean 2000 of our soldiers would be killed by Islamofacist if they were
stationed her, instead of Iraq?

>
>
>>
>> Here's what Bush's war has done to a once wonderful kid:
>>
>
> Was that wonderful kid drafted?

Was that wonderful kid sent to a place where he shouldn't have been, along
with the rest of our wondeful kids. Maybe one of those once wonderful kids
will come back and shoot you in the forehead, then you'll get the point.

>
>
>>
>> Bush should be fucking impeached for doing this to the youth of America.

> The angry lie-beral reveals his inner fantasies! LOL!! Anyways, Bush
> didn't
> do anything you are implying to the "youth of America"; the "youth of
> America" have volunteered and actively competed against each other in
> order
> to serve their country. Get your facts straight.

The youth of America is getting duped daily that what they are doing is right because it's avenging the 9/11 attacks. So they volunteer because of the lying conservatives and get dead for their lying cause. But keep on lying and getting kids killed, that's what lying conservatives are good for. But go ahead and tell me it's the kids fault for volunteering. Heck, 18 year olds can be pretty stupid and they deserve to die, right?

>> Bush can do whatever he wants. So that's what he did.
>>
>
>
> Yes. The office of POTUS has it's perks.

Yep, the perks of lying to kids to get them killed for your war that will get you and your friends rich.

>
>

>>

jd said: "The govt has every right to present it's point "

Which was in response to my earlier complaint about:

"News-style programs, funded by the govt., to promote the governments agenda
under the guise of a real, independent news report."

So yeah, you do approve of this government acting like Communist Russia,
Nazi Germany and Facists Italy.

>>>
>>> And you are still only presenting a small part of the story.

Who cares? Maybe you do, but the nation as a whole thought Gore was more
suited for being our President than Bush.

Good old highly liberal Al Gore was wanted more than lying conservative
Bush. Can't spin your way out of that.

>>> You are *clearly* projecting if you think I'm an "angry white male".
>>
>> I said "angry white male conservative". There's a legion of you that

> far off base.

Or you could also put some light on the fact that these were real people, real people that were poor and black and that there might be a connection as to why they were still stranded there.

But journalists shouldn't ask questions in the jd universe. If we had your way of journalism, Nixon would have never been impeached. We can't ask questions, just report the facts.

Pravda " Good evening. In Russia today, it was cold. Goodnight."

>> They were all poor before the storm and poor after.
>>

> their backs and what they could carry.

If they were better off, and left NO they'd be in no different condition than if they'd stayed. If they had money in the bank, the money was still there. If their property was destroyed it would have been destroyed had they been there or not. So, it made no difference.

If people were poor, they were even worse off if their only \real holding of value was their house and it was gone.

> But, if you find some comfort in
> focussing on playing the race-card and the class-warfare-card instead of
> trying to get help to a group of disaster refugees who likely could care
> less
> about race and class -- hey, it's a free country, knock yourself out...

Considering race and class is an important thing in this county for the past few hundred years and still is, I think it is important to discuss. But you should just imagine that blacks were never slaves, always had the right to vote and own land, and have never been hated for having different skin color. jd lives in Nirvana. How's the weather there?

From: http://www.democraticunderground.com/top10/05/192.html

In a remarkable piece of good fortune, the recently-released report into intelligence failures leading up to the Iraq war has completely exonerated George W. Bush and his administration! That's right - the Bushies didn't make any mistakes or errors in judgment at all. How conveeeeeenient! The report - prepared by a panel put together by, um, George W. Bush - asserts that the intelligence community - not just the CIA, but the DIA and the NSA - were "dead wrong" in almost every single prewar judgment. Not only that, but the Bushies didn't have anything to do with pushing the intelligence community to come up with Saddam's smoking gun. Well smack me with a herring and call me Marjorie.
In fact, the report practically places all of the blame for the entire Iraq war on an Iraqi defector named "Curveball", who was described by his handlers as "crazy" (not to mention a "drunken liar"). "So let me get this straight - "Curveball" makes up a bunch of shit, and the intelligence community swallows it whole. Then the intelligence community takes it to the Bush administration, and they swallow it whole, deciding to base the invasion of Iraq on the ramblings of a crazy drunken liar (Curveball, not George W. Bush). Oh, but it's not their fault. And, oh, I forgot that the only reason we invaded Iraq was so they could have elections, silly me.

So, despite the fact that the administration knew that Curveball was lying but a bunch of his "information" showed up in Colin Powell's presentation to the U.N. anyway, the administration is not to blame here. And despite the fact that George W. Bush said in 2003 that he had "darn good intelligence," after the uranium from Africa State of the Union debacle, he's not to blame.

Yep Casey volunteered for the Bush/Cheney lie about 9/11 and Iraq. Poor
Casey believed in his leaders while they laughed their asses off at how
gullible he and his other soldier friends were for falling for their lies.

On Annie Coulter:
"Occasionally" coarse? A "little bit" of a polemicist? This about a
"commentator" who claimed that the Democratic Party "supports killing,
lying, adultery, thievery, envy"; who said of the idea that the American
military were targeting journalists, "Would that it were so!"; who said
President Clinton "was a very good rapist"; who insisted that "[l]iberals
love America like O.J. loved Nicole"; who said that "I think a baseball bat

is the most effective way these days" to talk to liberals; who said it was lucky for former senator Max Cleland's political career that he lost an arm and two legs in Vietnam; who has said her "only regret with Timothy McVeigh is he did not go to the New York Times Building"; and who wrote that the only real question about Bill Clinton was "whether to impeach or assassinate."

And this comment from AC herself:

"When contemplating college liberals, you really regret once again that [American Taliban supporter] John Walker [Lindh] is not getting the death penalty. We need to execute people like John Walker in order to physically intimidate liberals, by making them realize that they can be killed too. Otherwise they will turn out to be outright traitors."

http://mediamatters.org/items/200504180001

Tom Delay on the Terry Schaivo judges: "This loss happened because our legal system did not protect the people who need protection most, and that will change. The time will come for the men responsible for this to answer for their behavior, but not today."

I could go on but it's late and if you're really interested you could reseearch the rest.

That might be a reason. But the much more likley reason is that
higher frequencies tend to work well in the daytime, lower frequencies
at night. Propagation is very poor at 11 meters in the dead of night,
just as it is in 90 meters at noon (at your location). They move around
according to where the best propagation is going to be in reference to
their target audience.

Tony

Source record: 44920

I think the least you would have were 3 speeds. Some really cheap recorders required you to place a larger capstan over the stock one to change the speed. The pro-gear used 15 ips, though that found it's way into consumer gear eventually.

I wisely trashed all that gear years ago. Too many reel to reels recorders were produced to be of any collectable value. Now IBM typewritters, well, that's another story....especially the IBM Executive.

I had the same problem a couple of years ago. Both Frank Cattell and
John Crabtree post instructions for fixing the problem, which I have
since lost. I remember it involved opening the radio up and using a
trimming tool or a screwdriver...

If you do a Google Groups search on Frank Cattell or FRG-8800, you
should be able to find the cure.

Sorry I can't be more helpful!

The lamp burned out and instead of replacing it with another blue/green bulb I elected to use LEDs. I sanded the surface of the LED case to make the light it generated non-directional. I used three blue ones from Radio shack 276-316 in a line in place of the bulb and outside the meter case I used a resistor to limit the current. It looks pretty cool but very "blue." Now that I see the result I'm thinking that maybe white LEDs like a 276-320 would have been better choice as even the white LEDs look somewhat blueish to me.

Anyone have any experiences using LEDs to replace bulbs on receivers?

Right now I'm looking at the bluest meter on the west coast and the moving red needle looks almost iridescent.

Yeah, I used a blue LED to replace an incandescent on a Telefunken HD5000. The device was behind a green filter. The result was very, very blue. With no trace of green.

I went back to white.

I've also used white LED's, which created a heated debate here, to replace the dial light on my T/O 3000-1.

The results are good. Covering the bulb with a thin tissue produced better results than sanding. Abrading with steel wool produced the best dispersion results.

I've also done some experimentation replacing the fuse type bulbs in my Marantz 2218 with LED's. The results, so far, have been less than exceptional. I tried replacing the stereo pilot on the Marantz with an LED, but the incandescent was integrated into the circuit, so I need to build a resistive network that emulates the incandescent in operation, and tap the LED out of that.

Digi-key offers a drop in LED replacement for a number of bayonet and screw in incandescents both A/C and D/C. The lighting circuits for both my McKay Dymek AM-5 and McIntosh C-26 are odd values so a direct drop in isn't available. And the Mc Kay rips the lighting voltage out of another circuit, so draw, and drop will have to closely approximate the incandescents.

Then again, I'll only have to do it once.

The upside of LED replacement of incandescents is two fold. The lower heat generated has enabled me to restore some of the cosmetics which were damaged by the heat. And pretty early in the life of the receiver, at that. The purity of colors has made for some very striking dials. The light blue accents on the tuning scale and the red accents on the

function indicators are visible from the street when the lights are low
in the living room.

> Right now I'm looking at the bluest meter on the west coast and the
> moving red needle looks almost iridescent.

Things with LED's can get pretty surreal when there are colors
involved. And the color gels in place for the incandescents, don't matter.

If I still had a schematic of the 8800 I could tell you exactly what to do to correct problem this assuming it's just the PLL trimmer coil in the oscillator circuit (which it usually is). There is a test point associated with this coil and if you adjust the coil slug for an exact voltage at the test point with the receiver set to a certain frequency it usually fixes it. The adjustment is in one of the metal cans on the top PC board. If someone can Email me a readible copy of the schematic I can advise you.

Source record: 44928

Steve - tyvm :o) ~ RHF

Once you 'create' a Shortwave Listening (SWL) Reporting "Tag-Line"
(Signature) File. The Tag-Line just becomes a natural part of what
you do when you Post a Shortwave Listening (SWL) Report here.

* * * * Example * * * *
Steve
New York City, NY
Drake R8B
Wellbrook 330s
* * * * * * * * * * * * * *

PLUS - The usual Shortwave Listening (SWL) Reporting "INFO"
that is customarily reported by most Shortwave Listeners(SWLs) :

1. "WHO" - IDENTIFY the Radio Station / Service / Program Information
Examples : BBC, VOA, Radio Havana Cuba, WWCR, HCJB, Voice or Russia,
KWHR, Vatican Radio, ABC, RNZI, Pirate Heard with Polka Music :o)

2. "WHERE" - FREQUENCY in kHz or MHz
Examples : 12345.6 kHz -or- 12.345 MHz

3. "WHEN" - TIME in UTC (GMT) Zulu Time or (Local Time)
Examples : 12:34 UTC -or- 5:34 (PST)

4. "HOW WAS IT" - Signal Conditions :

* S-Meter Reading plus Listenability
* * 3 Units (and steady); 3~5 Units ("~" varies between);
-or- 9+20 Units (9 plus 20 dB)
* * Sound/Audio Quality : Strong/Great -or- Average/Good/Fair
-or- Week/Poor

* SIO Code => http://tinyurl.com/98amd
"S" Signal Strength + "I" Interference + "O" Overall Merit (Quality)

* SINPO gets to subjective and complicated

* RST mainly for CW

yes it is as simple as that :o) ~ RHF

The diode current would be the main concern as far as I can see. A common maximum LED current is 20 ma., so you'd have to calculate the resistance value needed to limit the current using the voltage available at the bulb socket.

You could probably use the old base from the bulb to make up an LED assembly, so that NO soldering or rewiring is needed inside the radio.

I think it also has to do with the time of the year. And another factor. On the weekends during the mornings I pick up a lot. My guess it that people may be off from work and that is when they have time to transmit.

I am a night person. But I make an effort to get up earlier on Sat and Sun to pick up dx on 11m.

At one time I was into listening to the marine band on my scanner. But I got board with it. And funny because I am not far from the Atlantic Ocean. I think that the marine band is not for chat. I've only heard coast guard transmissions and boats only transmitting when coming into ports.

And for the AIR band, transmissions from ATC and pilots are usually to fast and short. And I am not sure what part of the sky the aircraft is. It could be near or far away. When the weather is bad, that when I listen in.

Immigrants Poem

I cross ocean,
poor and broke,
Take bus,
see employment folk.

Nice man treat me
good in there,
Say I need to
see welfare.

Welfare say,
"You come no more,
We send cash
right to your door."

Welfare checks,
they make you wealthy,
Free Medical it keep
you healthy!

By and by,
I got plenty money,
Thanks to you,
Canadian dummy.

Write to friends
in motherland,
Tell them 'come
fast as you can.'

They come in turbans
and Ford trucks,
I buy big house
with welfare bucks.

They come here,
we live together,
More welfare checks,
it gets better!

Fourteen families,
they moving in,
But neighbor's patience wearing thin.
Finally, white guy
moves away,

Now I buy his house,
and then I say,

"Find more aliens
for house to rent."
And in the yard
I put a tent.

Send for family
they just trash,
But they, too,
draw the welfare cash!

Everything is
very good,
And soon we
own the neighborhood.

We have hobby --
it's called breeding,
Welfare pay
for baby feeding.

Kids need dentist?
Wife need pills?
We get free!
We got no bills!

Canadian crazy!
He pay all year,
To keep welfare
running here.

We think Canada
darn good place!
Too darn good for
the white man race.

If they no like us,
they can scram,
Got lots of room in
Pakistan.

The bulb in the meter is an odd one. It's a long thin tube with a wire out each end that solder to posts inside the meter case. The bulb has a blue/green colored plastic shrink tubing around it. The radio comes with schematics and parts lists but I could not find a number for the bulb just the meter itself. The lighting looked better during the day with some outside light falling on the meter face but in the dark it's much blue-er. I'm pretty sure you know what I mean since you have done the same.

Well I expect that it will stay blue for at least the week now. Maybe next weekend I'll get around to replacing them with white LEDs.

Besides not knowing where to get the bulb it is the only non-LED indicator on the radio and I did not want have to worry about it burning out again.

I'll have to give the steel wool a shot also. Thanks for the advice.

> the same.
>

Same bulbs as in my console. They run hot. Replacing them is a PITA.
So, I went with LED's too. I went with white, in that application,
rather than blue, precisely for the reason you stated.

Now, my Focusrite preamps have blue lighting on the meter, and that
looks pretty sharp. But the meter face isn't off white, either.

Sometimes, you gotta just cut and try.

> Well I expect that it will stay blue for at least the week now. Maybe
> next weekend I'll get around to replacing them with white LEDs.

You might find that white led's may be produce too much glare. And
the higher blue content of the output will produce a less natural
coloring than you've grown accustomed to with the incandescent.
Incandescents produce light with more yellow content than a white LED.
But a white LED will take a filter with better efficacy than a single
wavelength. Using a paper filter will serve you here in producing both
the right amount of diffusion, and a more natural color.

Man charged with firing gun at rescue helicopter arrested
01:25 PM CDT on Sunday, October 9, 2005

Associated Press

A man who allegedly fired a weapon at a rescue helicopter in the day following Hurricane Katrina's hit on New Orleans has been indicted by a federal grand jury.

Wendell Bailey, 20, of New Orleans, was charged with firearms possession by a felon and firing upon a military aircraft, prosecutors said. The grand jury accused Bailey of shooting through the window of his apartment as a helicopter flew over his neighborhood.

Authorities said they found two revolvers and a box of ammunition under a mattress in his apartment. The charges carry up to 30 years in prison and $500,000 in fines.

Bailey had been previously convicted of cocaine distribution, authorities said.

I have some old AM/FM/Shortwave radios that have Air bands in them and two scanners too.Listening to Pilots is boring to me.Usually they say a few words and then it's long periods of silence around here.Usually the only Airport I can pick up is Hawkins Field which is about three miles from me.In 1962,I caught a piston engine Airplane from Hawkins Field to Fort Jackson,South Carolina.I was there for two weeks,waiting on a spot to open for boot camp at Fort Gordon,Georgia.Last part of December 1963,I cought a Mississippi Air National Guard piston engine Airplane from Jackson (actually,Flowood,Mississippi,they are located in Flowood) to Oakland,California,going to Vietnam.I don't like flying,but if I have to fly,I prefer piston engine Aircraft.To H..l with them Jets.I hope I never fly again.

>

Not to nitpick, but it was usually the stock capstan sleeve had to be removed to change speeds. AKAI/Roberts was famous for this. Simplified the mechanicals. Less wear on the belts and drive wheels.

And not all Pro gear used 15 ips. Ampex, for instance offered two speeds on their machines for years. 7 1/2 and 3 3/4 was the more common standard option. But you could order the machine in 15 and 7 1/2. It wasn't until three speed models started to hit the market that 15 ips was commonplace on Pro gear.

Although I did have a pair of Maggies that would run at 15 ips. Somewhat less fun than a drunken frat party was when the reel brakes would hang. Or the back tension would come out of calibration and tape would pool on the floor in knots on a mid reel rewind.

Great days, they were.

And I'd miss them, if I could still get 456 without selling a kidney.

I wound off my last pancake onto 7in reels for my 601 last year.

> I wisely trashed all that gear years ago. Too many reel to reels
> recorders were produced to be of any collectable value. Now IBM
> typewritters, well, that's another story....especially the IBM
> Executive.
>

Now that's a classic. Have one in my office. Along with a pair of Remington portables and a Royal desk model that came out of a newpaper city room.

Something about the tactiles and the sound of the type hitting the platten that makes it easier to compose when the client is waiting for the finished piece.

Although correcting on the Executive is a lot easier. And I don't type worth a sh*t. The IBM gets quite the workout.

But getting back to the topic....for quick capture of an item on SW, I've got a couple of tape machines setup through a Switchcraft hi-fi switching console. It came out of a stereo shop in Wisconsin. I can

direct any receiver to either tape deck at will, and monitor any output at the same time. Both machines are Masterwork portables. Just because I've had them since I was about this high. Tape is a lot easier to recover palatable audio from when the levels are out of adjustment. Digital just gets nasty, if it plays at all. When I hit out of bounds on my solid state machines, the rest of the track is often scrambled. Then again, not having to worry about the noise floor, I can set a lower input on the solid state machine and capture everything.

It's just not as much fun.

How about we've both got more than enough of them!
Another 320,000 quota coming in 2006! 'Nice sized city overnight.
They say there's a building boom and that we need the new homes for the
people that are coming in.
'Born and Raised here but hell I don't own a NEW home nor can I afford one.
Their lame excuse for the imports is a shortage of skilled labour. Can't
we train our own people or are we incapable of learning? Quite an insult
really.
F..CK the Government!!!!!!!!!!!!!!!!!!!!!!!!
Remember the song by the OJ's? The back stabbers.......They smile in your
face, all the while they wanna take your place!

Source record: 44774

On one side of my Sony ICF-SW7600GR there's an AM antenna jack, thus I would like to give a try with a long wire.

The main question is what appears to be a 3.5 jack, is it a stereo or a mono one?

Is there any chance to be improving LW/MW/SW reception using a 100 feet wire (10 feet above the ground) rather than the usual wind up antenna?

I hope not to be bothering you all with this issue.

Speaking of loggers -- anyone remember the [made for the government?] recorder that recorded for something like 24 hours on a 3" spool of 2" wide tape [super slow helical scan]? Kind of wonder where all those old spools are sitting [and what's on them....] Probably landfill at area 54.

Since you are just using the Tip for the long wire (nad maybe the
Sleeve for the ground) whether there's a Ring (in the case of a Stereo
3.5 mm plug) doesn't matter. If you use a Stereo plug, short the Ring
and Sleeve together, just to make sure.

I wouldn't go longer than about 30 feet with that radio (less if
strange signals start popping up).

Made for govt tape recorders? I don't know,but I will keep my eyeballs peeled for them at the local thrift stores and junk shops around here.I own a bunch of old movie projectors too,(yes,and one of them is a kid type movie projector.It has a long spiral spring,sort of like a light duty old fashioned screen door spring,that drives the two reels) in fact,less than two months ago,I bought three old movie projectors and two big empty reels and a big round movie reel can that has two movie tapes in it about Martin Luther and a cardboard box full of like new never been used before movie projector lamp bulbs.(those movie projector lamp bulbs aren't cheap if you buy them brand new) There are some decals on the movie projectors,a Church donated the three movie projectors and other stuff to a local Goodwill store less than one mile from where I live.I paid $25.00 for all of that movie projector stuff.I own a bunch of old slide projectors too and three old movie screens,the kind that fold up for compact storage.

I agree that 100 feet of wire is indeed too much in this case. And if I were going to try a 100 ft wire, I'd use an alligator clip to attach it directly to the 7600's antenna, rather than to the antenna jack, as it seems to me you're less likely to blow an FET or something. Also, I'd make sure the attenuation is turned up pretty high.

John Ford of the Strawbs on WOR's Joey Reynolds Show & NYC Show
w/Strawbs at Satalla

John Ford www.johnfordmusic.net of British band The Strawbs
http://www.strawbpage.ndirect.co.uk/ will do a LIVE Radio Interview on
the Joey Reynolds Show on WOR 710 AM late Monday night Oct. 17, 2005 at
2 am EST (actually early Tuesday morning). Show starts airing at 1 AM
til 5AM. John Ford Bio below.

John will have guitar, doing some live songs on the air, Joey Reynolds
will be spinning tracks from John Ford's current releases and plenty
ofchit-chat...

Joey Reynolds : Leader of The Royal Order of the Night People. He's
Mr. Nice Guy of Night Radio from coast-to-coast over the WOR Radio
Network, and especially in New York City where his syndicated show
satellites across the airwaves, originating over WOR 710 AM, is the
absolute king of the night.

The show can be heard live via internet stream from WOR's website
at www.wor710.com

John Ford will be appearing at Satalla, 37 West 26th St., NYC n
Wednesday, Oct. 19 performing 10PM following the Acoustic Strawbs at
7:30PM. Doors open: 6:30PM.
Admission for John Ford - $12 special combo price for both John Ford
and the Acoustic Strawbs Advance -$25/Door - $30

On John Ford:
The dynamics and versatility of John Ford's musical talent run the
gamut from the London Folk clubs to large scale international rock
venues of the British Invasion of The 60s-70's-80s, touring and playing
with such music legends as Santana, Jimi Hendrix, The Eagles, Frank
Zappa, Marc Bolan/T. Rex, Blue Oyster Cult, ZZ Top, RUSH, REO
Speedwagon, King Crimson, Lynyrd Skynrd, Billy Preston, Cat Stevens and
more.
In 1971, John Ford joined The Strawbs, primarily known as a Folk Rock
group, into a new direction in the Prog-Art Rock. Scene. John penned
perennial favorites, "Heavy Disguise" and "Part of the Union," The
Strawbs biggest Chart Hit, included on the Album, released as a Single
and spent 59 weeks on the album charts, rising to Top of the Pops fame,
working with Bowie/T-Rex Producer, Tony Visconti. John Ford received
five Gold Records and Platinum, to boot. A few years later, John Ford
and Richard Hudson, formed Hudson-Ford, with Top 10 Pop Chart Hit,
'Pick Up The Pieces,' along with "Burn Baby Burn" and "Floating In The

Wind."
John has also released solo albums of his own work: "Love Is A Highway" in 1998, "Heading For A High" in 2000, "Natural High" in 2002, and "Backtracking" in 2005 are all John Ford originals, with him performing virtually all the vocals and instrumentation, as well as producing the albums. Now available for Holidays -"Whatever Happened to Christmas?" - a collection of Holiday songs w/ new unreleased JF originals and the ROCK 4 XMAS ALLSTARS COMP - includes JF's rockin' version of "White Christmas", along with tracks from Cheap Trick, Larry Hoppen (Orleans), Eddie Money, Ronnie Spector & more! John Ford's future releases for 2006 include "JOHN FORD: LIVE AT THE BOTTOM LINE."

Indonesian President Accuses Western Intel Of Being Behind Bali Bombings

Free Market News | October 17 2005

An extraordinary documentary produced by Australian public television, "Inside Indonesia's War on Terrorism," will be rebroadcast again on Monday, October 17 at 1PM.

In the program which first aired on October 12, the blind, former President of Indonesia ï¿½ reportedly more trusted than any other official in the country - told SBS-TV Date-Line, Australiaï¿½s state-run public TV, that the horrendous Bali bombing, which killed more than 200 in Indonesia, was planned and carried out by Indonesian police or military personnel at the behest of Western powers.

The transcript has already reportedly been removed from the archives of the SBS, Australia's Special Broadcasting Services, but certain alternative Internet sites, apparently anticipating this, claim to have downloaded the transcript and have reproduced it in its entirety. One of them is GlobalResearch.ca, and the excerpt that follows is taking from its site. It features Abdurrahman Wahid, the former Indonesian president who has achieved an almost iconic status in that ordinarily peaceful but impoverished country.

Begin transcript cite

Today is the third anniversary of the first Bali attack that saw 202 people killed, including 88 Australians. Abdurrahman Wahid now has questions about that attack as well. While some regard him as an eccentric, he is the former president and is often described as the conscience of the nation, revered by tens of millions of moderate Muslims. As such, he's one of only a few people publicly prepared to canvass the unthinkable - that Indonesian authorities may have had a hand in the Bali atrocity. He believes that the plan for the second, massive at the Sari Club, which caused the majority of casualties, was hatched way above the head of uneducated villagers like Amrozi.

ABDURRAHMAN WAHID: Amrozi was involved in the lighter bomb. That's a problem always. Even though I agree that he should be given a stiff punishment, but it doesn't mean that he is involved. No, no, no.

REPORTER: So you believe that the Bali bombers had no idea that there was a second bomb?

ABDURRAHMAN WAHID: Yeah, precisely.

REPORTER: And who would you suggest planted the second bomb?

ABDURRAHMAN WAHID: Well, it looks like the police.

REPORTER: The police?

ABDURRAHMAN WAHID: Or the armed forces, I don't know.

Wahid's speculation is chilling and again there's no evidence to support it. But there's no doubt that he's a barometer of how many Indonesians view the whole terror campaign.

End transcript cite

The news about the program's upcoming second broadcast was carried early Sunday morning eastern standard time by Rense.com, the powerful, alternative Internet news site denounced by the State Dept., along with some others, as unreliable and symptomatic of Net disinformation.

But the State Dept. will have to work hard to explain what may become the most momentous Jï¿½accuse since Franceï¿½s Dreyfus Affair.

Rense.Com described the program as follows, ï¿½In this documentary, which is described as the world's most explosive expose of International Intelligence Agencies ops and cover-ups, the former president of Indonesia (who Australians describe as the only honest high-level Indonesian politician), disclosed that the Indonesian police or military are behind the Bali bombings. Also in this program, Indonesian journalists and researchers state, unequivocally, that 'Moslem terrorists organizations' DO NOT EXIST as portrayed by the government - that they are created and coordinated to act by military-connected provocateurs. ï¿½ They further claim that the Indonesian military is totally corrupt and that Generals and politicians are pocketing vast hordes of money they receive to 'fight terrorism' - 'terrorism' which, in fact, they are creating themselves."

The Australian (Australian.news.com) carried an analysis of the program from which the following is excerpted:

ï¿½The program ï¿½ claims a key figure behind the formation of terror group Jemaah Islamiah was an Indonesian spy. Former terrorist Umar Abduh, who is now a researcher and writer, told Dateline Indonesian authorities had a hand in many terror groups. 'There is not a single Islamic group either in the movement or the political groups that is not controlled by (Indonesian) intelligence,' he said. Abduh has written a book on Teungku Fauzi Hasbi, a key figure in Jemaah Islamiah (JI) who had close contact with JI operations chief Hambali and lived next door to Muslim cleric Abu Bakar Bashir. He says Hasbi was a secret agent for Indonesia's military intelligence while at the same time a key player in creating JI. Security analyst John Mempi told SBS

that Hasbi, who was also known as Abu Jihad, had played a key role in JI in its early years. ï¿½ Another terrorism expert, George Aditjondro, said a bombing in May this year that killed 23 people in the Christian village of Tentena, in central Sulawesi, had been organised by senior military and police officers. 'This is a strategy of depopulating an area and when an area has been depopulated both becoming refugees or becoming paramilitary fighters then that is the time when they can invest their money in major resource exploitation there,' he said."

There would be a GWOT, just not one where we invaded wherever we damned
pleased for reasons that were bogus.

> Then we would have to see how many other
> attacks, casualties and deaths we would have suffered in addition to 9/11.

It would be less than 2000 I bet.

> Gore gives no
> indication that he would have done little of significance other than

> If you say so. Oddly enough, the govt seems to be functioning as well as
> it ever has, if
> not better, than normal.

Yeah, Brown of FEMA did an excellent job. Thats' why he resigned and Bush
said that the government didn't do enough. You think a horse show manager
can do the top level job of emergency management. His staff that had been
there for years knew of the danger and vented their concerns. Brown was
busy figuring out which Arabian horse he was going to send to NO.

>
>
>

> story that
> factually represents all sides. Not the agenda-journalism pieces promoting
> only a narrow
> point of view that you seem to prefer. Care to try again, sparky?

You said you only wanted facts. If a journalists asks the President if race played an issue in the NO incident, that to you would be making things a race issue, which you've already said is a no-no. So people around the country may have looked at race as an issue even if it wasn't talked about on tv, yet reporters should just keep mum and let people just speculate amongst themselves.

Recall that race wasn't even thought about until late in the week after the hurricane hit. People start wondering what's taking so long. Who's fault is it, what part does lack of resources play in it, is there some greater underlying thing happening? But don't ask those things because jd doesn't like them. We should just report that some people died when a hurricane hit. Now onto the sports report.

>
>
>
>>>> They were all poor before the storm and poor after.
>>>>
>>>
>>> Not *ALL* of those left in the city were poor before the storm. Surely

>> destroyed had they been there or not. So, it made no difference.
>>
>
> Of course it made a difference. Those left in NOLA had *NO* access to any
> resources,

Wrong. There were people that had prepared for the storm, who had resources to get generators, buy fuel, had a house to stay in, stored lots of drinking water and food and medicines. The less fortunate were left at a convention center where all they had wwas what they carried on their backs.

Many never left NO. Those in the convention center had to.

>
>
>>> But, if you find some comfort in
>>> focussing on playing the race-card and the class-warfare-card instead
>>> of trying to get help to a group of disaster refugees who likely could
>>> care less
>>> about race and class -- hey, it's a free country, knock yourself out...
>>

> see, that you
> are not just another race-baiting, class-warfare driven lie-beral.
>
> Exactly what did race have to do with Katrina, rescuing those in need,
> helping the
> refugees and the overall relief effort?

High density of black population that had to wait 5 days beofre being rescued. Which is it jd, great FEMA screwup or because it wasn't a high priority. Rice was seen shopping for $1000 shoes while people weree dying. Bush left his ranch 2 days early on his 5 week vacation. NO didn't seem to be a priority.

>
> Exactly what did social class have to do with Katrina, rescuing those in

> need, helping
> the refugees and the overall relief effort?

They weren't Republican voters.

>
> Exactly what did slavery have to do with Katrina, rescuing those in need,
> helping the
> refugees and the overall relief effort?

A long history of oppression that still haunts us today.

>
> Exactly what did owning land have to do with Katrina, rescuing those in
> need, helping the
> refugees and the overall relief effort?

More reason why blacks had been given less than whites.

>>>

And I've worked with all off them, in markets across the country.
I've owned several, myself. With the exception of one I worked with in
St Louisc, I'd not seen a 15 ips Ampex until I got to Chicago.

Message-ID: <11l7ibvn7at1dbc@corp.supernews.com>
Source record: 44792

I thought this was one of the more sensible things I've seen in a while.
Fresh air.

Onward, moderate Christian soldiers
Our faith calls us to tolerance and healing of divisions

by John Danforth

It would be an oversimplification to say that America's culture wars are now between people of faith and nonbelievers. People of faith are not of one mind, whether on specific issues like stem-cell research and government intervention in the case of Terri Schiavo or the more general issue of how religion relates to politics. In recent years, conservative Christians have presented themselves as representing the one authentic Christian perspective on politics. With due respect for our conservative friends, equally devout Christians come to very different conclusions.

It is important for those of us who are sometimes called moderates to make the case that we, too, have strongly held Christian convictions, that we speak from the depths of our beliefs and that our approach to politics is at least as faithful as that of those who are more conservative. Our difference concerns the extent to which government should, or even can, translate religious beliefs into the laws of the state.

People of faith have the right, and perhaps the obligation, to bring their values to bear in politics. Many conservative Christians approach politics with a certainty that they know God's truth and that they can advance the kingdom of God through governmental action.

So they have developed a political agenda that they believe advances God's kingdom, one that includes efforts to "put God back" into the public square and to pass a constitutional amendment intended to protect marriage from the perceived threat of homosexuality.

Moderate Christians are less certain about when and how our beliefs can be translated into statutory form, not because of a lack of faith in God, but because of a healthy acknowledgement of the limitations of human beings. Like conservative Christians, we attend church, read the Bible and say our prayers.

But for us, the only absolute standard of behavior is the commandment to love our neighbors as ourselves. Repeatedly in the Gospels, we find that the Love Commandment takes precedence when it conflicts with laws. We struggle to follow that commandment as we face the realities of everyday living, and we do not agree that our responsibility to live as

Christians can be codified by legislators.

When, on television, we see a person in a persistent vegetative state, one who will never recover, we believe that allowing the natural and merciful end to her ordeal is more loving than imposing government power to keep her hooked up to a feeding tube.

When we see an opportunity to save our neighbors' lives through stem-cell research, we believe that it is our duty to pursue that research and to oppose legislation that would impede us from doing so.

We think that efforts to haul references of God into the public square, into schools and courthouses, are far more apt to divide Americans than to advance faith. Following a Lord who reached out in compassion to all human beings, we oppose amending the Constitution in a way that would humiliate homosexuals.

For us, living the Love Commandment may be at odds with efforts to encapsulate Christianity in a political agenda. We strongly support the separation of church and state, both because that principle is essential to holding together a diverse country and because the policies of the state always fall short of the demands of faith. Aware that even our most passionate ventures into politics are efforts to carry the treasure of religion in the earthen vessel of government, we proceed in a spirit of humility lacking in our conservative colleagues.

In the decade since I left the Senate, American politics has been characterized by two phenomena: the increased activism of the Christian right, especially in the Republican Party, and the collapse of bipartisan collegiality. I do not think it is a stretch to suggest a relationship between the two. To assert that I am on God's side and you are not, that I know God's will and you do not, and that I will use the power of government to advance my understanding of God's kingdom is certain to produce hostility.

By contrast, moderate Christians see ourselves, literally, as moderators. Far from claiming to possess God's truth, we claim only to be imperfect seekers of the truth. We reject the notion that religion should present a series of wedge issues useful at election time for energizing a political base. We believe it is God's work to practice humility, to wear tolerance on our sleeves, to reach out to those with whom we disagree and to overcome the meanness we see in today's politics.

For us, religion should be inclusive, and it should seek to bridge the differences that separate people. We do not exclude from worship those whose opinions differ from ours. Following a Lord who sat at the table with tax collectors and sinners, we welcome to the Lord's table all who would come. Following a Lord who cited love of God and love of neighbor as encompassing all the commandments, we reject a political agenda that displaces that love. Christians who hold these convictions ought to add their clear voice of moderation to the debate on religion in politics.

To respond to this column, write to Episcopal Life or e-mail commentary@episcopal-life.org. We welcome your own commentary at the same address.

ï¿½ ï¿½ ï¿½ ï¿½ ï¿½-- John C. Danforth, an Episcopal priest, formerly served as Republican senator from Missouri and Ambassador to the United Nations.

According to a Doctor guy guest speaker whom was on
www.coasttocoastam.com a few nights ago,,, All they need to do is
cook them birds properly and there would be no problem with eating
them.Sometimes when I was at Tan Son Nhut,(1964) we would drive some
trucks to a certain Port in Saigon and offload a small barge load of
Ammunition for our 114th Aviation Company.There was a Vietnamese
Restaurant about half a block up the road and we sometimes would go
there for our lunch time meals.I usually ordered roast duck and rice and
eggs with potatos and gravy.Sure was real good eating at that little
restaurant and it didn't cost much money either.I rate that little
restaurant with Five Stars. www.tsna.org

That's because it's 9590, not 9580.

9580 shifts to 7240 at 14:00, (Likewise 6020 -> 5995).

But 9590 continues until 16:00. But there's lots of QRM, at least there
was on Sunday when I was trying to tape The Science Show and The National
Interest. If it gets any worse, it's time to download the Podcast .

www.devilfinder.com Sargent Rink Scott Air Force Base Illinois 1963

I just now remembered the last name of that sawed off wrinkled face U.S.Army Sargent whom was at Scott Air Force Base,Illinois when I was there in 1963 from January through October 1963.(ARADCOM) He always liked to snag somebody for whatever s... details he had in mind,even when we were suppose to be off duty after 5:00 PM and on weekends too.(you just had to like that old buzzard!,I usually tried to steer clear of him,but really,he was an A OK guy) One time,he snagged four of us to move a small wooden storage shed (it was still full of tools too) from where it was sitting to another spot about fifty feet away.Sargent Rink,I am pretty sure there must be a least a few dozen Forklifts on this here Air Force Base,I said to Sargent Rink.Somebody went and found a Forklift.

The guy who had his radio talk show in Massachusetts,his radio show came on the air at midnight (Central Time Zone) I guess it's been about ten years ago since his radio show was on the air here in Jackson and if I remember,I think his radio show was on the air six or seven nights a week.I just don't remember his name though.One of my other favorites that used to be on the air in the afternoons here in Jackson was Jerry Hughes radio talk show.Unfortunately,great radio talk show host and their radio shows don't stay on the air for very long around here.They wind up getting bumped off the air for other radio shows that aren't nearly as good,in my opinion.I have asked Paul Gallo at www.supertalkms.com numerous times before to let Rodger Fredinburg www.regularguy.com get back on the air at supertalkms 97.3 FM,but Paul Gallo continues to keep his head stuck up his A..!

ACMAC,

The Sony ICF-SW7600GR's External Antenna Input is an 1/8"
Mono-Jack as are most 'portable' AM/FM Shortwave Radios.

Note - The Sangean ATS-909 Radio is an exception to this and
uses a 1/8" Stereo-Jack for the Radio's External Antenna Input.

hope this helps - iane ~ RHF

We were talking about taxpayer subsidized events at taxpayer
subsidized venues. The Coach is an authority figure representing a
taxpayer funded institution, whether he is on the clock or
volunteering.

2727. Two Things that most 'portable' AM/FM Shortwave Radios Could Use for "Improved" Shortwave Radio Listening (SWL)

Newsgroup: rec.radio.shortwave
Date: 2005-10-17 18:56:43 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129575403.022548.231340@z14g2000cwz.googlegroups.com>
Source record: 44985

Steve,

Two Things that most 'portable' AM/FM Shortwave Radios Could Use
for "Improved" Shortwave Radio Listening (SWL) :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5867

1. External Antenna Input Isolator :
The simplest way to Protect most of the Front-Ends of these
'portable' AM/FM Shortwave Radios is to use a TV 75 Ohm to
300 Ohm Matching Transformer between the Coax cable and the
1/8" Mono-Plug that is used to Plug into the Radio's External
Antenna Input 1/8" Mono-Jack. The two 300 Ohm Leads of the
Matching Transformer are connected one to the Tip (Antenna)
and the other to the Barrel (Ground) of the 1/8" Mono-Plug.
You now have your External Antenna Input Isolator to use
with your these 'portable' AM/FM Shortwave Radios. Good for
Shortwave and FM Radio Reception with some built-in Attenuation
of the AM/MW Broadcast Band which is generally a good thing
with these 'portable' AM/FM Shortwave Radio. This is because
most these 'portable' AM/FM Shortwave Radios often suffer
from Front-End Signal Overload from AM/MW Radio Stations when
they are Hooked-Up to an External Shortwave Antenna that is
longer than 35 to 50 Feet or more.

2. Moderate Size Low Noise Inverted "L" Antenna :
The simplest Antenna for most of these 'portable' AM/FM Shortwave
Radios is an Inverted "L" Antenna of about 45 Feet long with a
15 Foot Vertical-Up-Leg and a 30 Foot Horizontal-Out-Arm.
Use a TV Matching Transformer with one of the 300 Ohm Leads
connected to the Wire Antenna Element; and the other Lead
connected to a Ground Rod/Point. Connect the 75 Ohm end of
the TV Matching Transformer to 75 Ohm RG6 Quad-Shield Coax
Cable; and connect the other end of the Coax Cable to the
External Antenna Input Isolator.

TIP - For these 'shorter'Shortwave Listener (SWL) Antennas :
I like FLEX-WEAVE Antenna Wire the so called "Cadillac of
Aerial Wire".
http://www.davisrf.com/ham1/flexweve.htm
FLEX-WEAVE comes in #14 (168 Strands of #36 Copper Wire)
http://www.davisrf.com/ham1/flexweve.htm
Highly UV Resistant PVC Jackets (Insulatated Covering) of
Clear, Black, and Camouflage Green.
http://www.davisrf.com/ham1/flexweve.htm

FWIW - RF Junkie now offers an "SWLZ" 9:1 Matching Transformer
that uses an "F" Connector for use with RG6 Coax Cable for
Shortwave Listeners (SWLs)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/4245
SWLZ => http://www.geocities.com/qrp_baluns/SWLZ.html
These work better then the common TV 300 Ohm to 75 Ohm Matching
Transformers and give good performance from 500 kHz to 30 MHz
for the Shortwave Radio Listener.
IMAGE - Hooking-Up the SWLZ as a Low Noise Inverted "L" Antenna
http://www.geocities.com/qrp_baluns/APP-SWLZ.html

READY-MADE - Shortwave Listener (SWL) Antenna that fits into
the 45 Foot Long Range is the PAR Electronics EF-SWL Antenna.
It come with the Matching Transformer and 45 Feet of Flex-Weave
Wire Antenna Element; and all you need to do is Install your
Ground Rod; Rig the Wire Antenna Element; and Attach your Coax
Cable. => http://www.parelectronics.com/swl_end.htm
http://www.grove-ent.com/ANT8.html

We were discussing the immediate aftermath and the lame excuse used by
FEMA that they couldn't come in because people were shooting at the
rescue helicopters. Once the Army arrived on Friday (2 September)
this phase was over.

I did not say that no helicopter has ever been shot at. The time
period in question was between the Hurricane and when real help showed
up.

Those cheap ''BALUNS'' are actually autotransformers and offer zero
(zip, iota, nada) DC isolation between the primary and the secondary.

I would think you'd be more likely to blow the front end if you clipped it
to the antenna. Some/many radios have some sort of pre-amplification to the
whip and not at the jack. Of course, I COULD be wrong in this case...

The little monsters can have all the bloody sacrifices they like, as
long as the staff doesn't help them in their creepy cult rituals.

I'm not much of a protestor. If the legislatures are invoking God
before they do their wonderful work, I would think this God shit must
be pretty damn demonic.

which is of course a part of the constitution of the US, or didn't you
know that?

>I
> object to you being equal in that you "claim" to be a man.

I am a man.

I am your equal as a matter of law
>
> Based on you actions here I despute you are indeed a man.

that is your right I supose but it only proves you a fool, and exposes
you a someone that does not respect the constitution or it's framers

that is a simple fact and you can't get arround it.

You, Stevie, Dave, Ace and Dee do not show respect for the basis of
civilised society. each of you in your own ways chooses to deregard and
direspect those principles

I think the least you would have were 3 speeds.

Yea, most "home" reel to reels used 1 7/8, 3 3/4, 7 1/2.
Usually only the higher end decks used the faster speeds,
and larger reels. The standard large reel for home decks
is 7 inch. Of course, pro's often used larger and faster.
Reel to reels are not totally obsolete, but depends on the
uses... I do quite a bit of music recording, etc, so the decks
are still pretty handy. But...If I were to record my radio, I use
the computer. It's much easier being the radio already is piped
into the computer and ready to go.

Message-ID: <1129580936.968165.174110@g47g2000cwa.googlegroups.com>
Source record: 45065

Dear Acmac,

You cannot improve LW/MW reception with ANY antenna connected to the Sony ICF-SW7600GR's 3.5mm antenna input or clipped to the built-in rod antenna. The only way to improve MW reception is via a Select-a-Tenna, Terk AM Advantage, or other similar induction-coupled loop antenna which is placed near the radio and can be rotated in the desired direction. I suppose one of these could be home-brewed for LW but it would be rather large and ungainly.

Note that the radio offers very good reception on MW and a Select-a-Tenna really helps. You can mount both on a "lazy susan" and even take the whole thing outside for quite satisfactory MW reception.

A long wire antenna of no more than 50 feet with a lead-in wire soldered or crimped to a 3.5mm mono plug will work for shortwave frequencies but remember to install proper lightning/static protection. (You could cut the wire from one of those wind-up antennas and use it for a lead-in wire; it already has the 3.5mm plug attached.)

Frankly however, I don't think it's worth it as the ICF-SW7600GR, good as it is for its purposes, is no DX machine. You'd probably be better off with a Sony AN-LP1 Active Loop Antenna, or, even better, an AOR WL500 Window Loop Antenna (if you can find one).

If you desire to erect a long wire of 100 feet or so, you should consider buying a receiver which can take advantage of such an antenna.

Best,

Joe

no I don't say that

again you simply lying little boy

I said it was written by Tom (mostly) as part of the comittee set up by
John Hancock to manage the declaration

it was then editied (mostly words hacked out I remember 2 additions to
that being "with relance on Divine providence" and "in many cases" to
section on trail by jury i think) most notable was the removal of the

anti-slavery language.

For One and All,

I would Agree with Joe Analssandrini.

My VOTE would be for the Sony AN-LP1 Active Shortwave Loop Antenna
alone with the Select-A-Tenna Model 541-M AM/MW Loop Antenna.

Together these two External Antenna work great with the
Sony ICF-SW7600GR 'portable' AM/FM Shortwave Radio.

READ - Sony ICF-SW7600GR Radio and Sony AN-LP1 {SW}
and Select-A-Tenna {AM/MW} Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2588

READ - Sony ICF-SW7600GR and Sony AN-LP1 'portable' Shortwave Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1901

MORE - Sony ICF-SW7600GR Radio reading:

* Shortwave Listener (SWL) Antenna 'options' for a
Sony ICF-SW7600GR Radio
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2892

* Sony ICF-SW7600GR - Two In-Door Antennas for AM/MW and FM Radio
Bands
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2936

* Two Radios with AM-SYNC for Nightime "BedSide" Listening
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/3116

sony no baloney - iane ~ RHF

David,

Another option for using a "Long" Random Wire Antenna with a
'portable' AM/FM Shortwave Radio is the "Portable Wire Antenna"
(PWA) that was created and written about by Tom Sevart [N2UHC].
PWA => http://www.geocities.com/n2uhc/portablewire.html

2768. CUBA calling FLORIDA

Newsgroup: rec.radio.shortwave
Date: 2005-10-17 21:40:58 UTC
From: "Keith and Phil at AussieSeek.com Political Messageboards" <nswamfm@yahoo.com>
Message-ID: <1129585257.934288.143500@o13g2000cwo.googlegroups.com>
Source record: 45077

Keith

Said

at

http://www.aussieseek.com

and seeks your comments here and there

Cuba denounces "US radio and TV aggression"

US international broadcasting was the focus of attention at the United Nations yesterday, during a debate on information. The Cuban ambassador to the UN, Rodrigo Malmierca, took the opportunity to denounce the Radio and TV Martí broadcasts beamed into Cuba by the US. The ambassador called the broadcasts illegal, and said that they "encourage illegal immigration and civil disobedience and blatantly distort the country's reality."

Malmierca said further that the broadcasts are a "crude aggression" against his country, on which Washington spends millions of dollars every year, in total disregard of UN General Assembly resolutions, international law and International Telecommunication Union regulations.

The Cuban ambassador said the US Republican Administration of President George W Bush has resorted to various media in this radio-electronic war, as part of its "obsessive, unhealthy policy" to destroy the Cuban Revolution. "We will not allow our sovereignty to be ridden roughshod over, especially by absurd US pro-annexation ambitions," he said.

TYSIA SAID

Fidel is free to broadcast back, and does. I get a stronger signal from Havana than I do from the nearest Florida station.

Keith SAID

... The number and rate of approvals from Cuba have been declining despite the lure of big bucks in Florida, Somalia and the Ukraine have now passed CUBANS leaving for the BIG BUCKS

Many cubans send Us dollars home to Havana

Fidel has never wanted Families to be apart but knows for many the Big Bucks are handy as are economic refugees

To his credit He subsidises phone calls to relatives

Each year 60 million attempts are made to telephone Cuba from the US; only 500,000 get through. Just 79 lines are available because, since 1962, the US has prohibited all commercial dealings with Fidel Castro's government. Since 1966 the Cubans have not received their share of the price of the calls, estimated to be worth at least $60 million.

So over 20 years... Thats a Big Phone Bill the USA wont Pay

I took this advice and built the PWA. It works like a charm.

I use it indoors though, and replaced the "weight" with an alligator clip.
I also followed RHF's advice about leaving extra wire hanging off the "toroid" and
and connecting a 1/8 mono plug for connecting to portable SW antenna jacks.

Here's how I made the modified version:

Materials...

Radio Shack stuff.
Hookup wire AWG22 90 feet cat. #278-1218
1/8" solderless mono mini plug cat. #274-868
Package of alligator clips cat. #270-375
(Online order $16.90 delivered, probably cheaper if you buy locally)

I got a five foot length of 1/2 inch inside diameter pvc at Home Depot for a couple of dollars. I
have a "mini" hacksaw which I used to cut a one foot length. I left 8 inches of wire hanging over
the end of the pvc and used super glue to tack the wire in place near the end while winding more
wire on the tube of pvc (see the PWA website picture). Then I wrapped the whole thing in black
electrical
tape. From the remaining spool I ran 50 more feet of wire, after I finished the tube part. I
attached an alligator clip to this long end of wire, and the mini-plug to the "short piece" that
extended beyond the "toroid" end. Then ran about 8 feet of the long wire end up the wall, tacked it
in place and continued to work my way around the ceiling.

I put the "tube" over a partially extended whip antenna of a portable SW, with mini-plug into the
antenna jack.

I assume 100 ft of wire would help enhance the lower frequencies.

Caveat: wives hate seeing wires like this. White or "off white" would be better and, if you can find
it at R.Shack, some white "wire wrap" would be almost invisible (you'd need to find a way to strip
the thin insulation though). I don't know the gage of this "wire wrap" but it's really

thin. I've
seen it in 50 ft. lengths at RS.

The basic mission of public schools is teaching the three R's, not holding worship services for the majority religion. A proper lesson in public schools might be a discussion of the difference between "here" and "hear.

2800. Using a Bundled {Multi-Wire} Cable as a Long Wire Antenna for use with Several Radios

Newsgroup: rec.radio.shortwave
Date: 2005-10-17 23:19:32 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129591172.519811.54810@f14g2000cwb.googlegroups.com>
Source record: 45159

Steve,

The Idea finally came back to me after I was looking something
else in the Message Archieves of the Shortwave (SWL) Antenna
Group on YAHOO !
GROUP => http://groups.yahoo.com/group/Shortwave-SWL-Antenna/

Buy some Bundled {Multi-Wire} Cable that has several 'individual'
Insulated Wires "Bundled" together to form the Cable.

MATERIALS - Common 'types' of Bundled Wire Cables :

* Outdoor Telephone Four (4) Conductor Cable 100 Feet
RadioShack Catalog # 278-385 => http://tinyurl.com/c6s4c

* Telephone Six (6) Conductor Cable 100 Feet
RadioShack Catalog # 278-874 => http://tinyurl.com/dd2x2

* Telephone Modular (4 Wire) Telephone Cable 100 Feet
RadioShack Catalog # 278-366 => http://tinyurl.com/d3v3c

* PC-Network Wire 4-Twisted-Pairs (8 Wires) 100 Feet
RadioShack Catalog #: 278-830 => http://tinyurl.com/ch7dd

* TV Rotator Control (3 Wire) Cable 100 Feet
RadioShack Catalog # 15-1150 => http://tinyurl.com/8wyrq

HOW TO BUILD YOUR MULTI-ELEMENT SINGLE CABLE ANTENNA :
[Using a Bundled {Multi-Wire} Cable as a Long Wire Antenna
for use with Several Radios]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5875

1. Thread one end of Cable through an Insulator.
- Remove about Two Inches (2") of the Outer Cable Insulation
from the Bundled {Multi-Wire} Cable.
- Bend over the Individual Wires and Tape each of the
Bent pieces with Plastic Electrical Tape. Ensuring that each
of them is Double Insulated from each other.
- Tape ALL the Wires "Together" with Plastic Electrical
Tape.
- Secure the Cable to the Insulator
- Attach a Nylon-Poly Rope to the other Side of the Insualtor.

2. Thread the other end of the Cable through another Insulator.
- Position the Cable on the Insulator for your near Mounting
Point and Secure the Cable to the Insulator.

- Note - Leave enough Cable so that it can be Run/Routed
to your Radios.
- Attach a Nylon-Poly Rope to the other Side of the Insulator.

3. Rig your Cable Antenna Element. Rig the Bundled {Multi-Wire}
Cable like you have your current Wire Antenna Element.

4. In the Radio Shack take the Bundled {Multi-Wire} Cable.
- Remove about Twelve Inches (12") of the Outer Cable
Insulation from the Bundled {Multi-Wire} Cable.
- Separate out the Individual Insulated Wires.
- Remove about One Inch (1") of Insulation from each of the Wires.
- Attach One Wire (Each Individually) to the Antenna Input
of Each of the Separate Radio/Receivers.

Conclusion :
Again not the greatest Shortwave Listening (SWL) Antenna; but it
has some merrit in accomplishing what you are trying to do with
One Antenna directly connected to Several Radio/Receivers.

i have six retro desk top shortwave radios, none of which
use a coaxel connector.

i have one 90' #14 stranded insulated wire strung accross
my roof about 35' in the air.

i was woundering if i used a multi tap ground bar like what
you see in an electric panel and bring the antennas feed
into it then attach the antenna wires from the other radios
into the spare taps on the grong bar.

its a simular situation i have my radios grounded by.

they all are attached to a grounding strip by a #12 wire
then my main ground to the ground strip to an 8' driven
ground rod is #10 all the wire i use is copper.

I still call it Peiping.

I have a cousin who morphed into an episcopal from a Catholic. She seemed to think the Catholics were a little to strict. Heheh. I prefer to pretty much ignore the church altogether and just read my bible when I please. I think the nice people will get to heaven. That's the goal for us. Right? I also try and treat those other human beings nice when I can. I get a little grouchy when I'm stressed and sometimes I throw stuff. I flung a frying pan at the wife last week. Not directly at her, but just so she would know that I was unhappy she ate my steak.

Yup, sure do remember it. We used it back when I worked at Channel 2 TV
in Detroit when it was still a CBS outlet.

It's called a "Sound Scriber" and had a quadruplex head, helical scan
using media as you described, with a much thicker base than the VCR tape
of the day.

Trivia note---

Speaking of the wide tape, it reminds me of how 2" video tape was
spliced back then...we used Q-tips (tm) and a fluid with suspended
magnetic particles. You swabbed the tape with this solution and you
could see the helical scan lines on the tape. You would then use a
"splicing block" and a razor blade and cut and splice the tape on a sync
pulse. (that was the whole point of the exercise. If you spliced it
anywhere other than the sync pulse, the picture would roll when it came
to the splice). BTW, between the compressors for the air bearings and
the vacuum pumps to hold the tape against the tape guides, the video
tape room was the noisiest place in the station. Ah, the good old days...

Doing what he did?? He took the thing off auction because it wasn't up to
snuff. He said it would be back up when he gets it back from peaks and
tweaks. Some of these guys don't pay attention I guess.

Now that is a switch!,,, throwing frying pans at your wife.It must get pretty interesting around there sometimes.I sort of know a woman in Texarkana,Texas.She and her hubby throw beer cans at each other.I used to have a gal friend shacking up with me.I would be in my bathroom shaving,getting ready to go to work.She would come in there and sit down on the toilet and do number two.She could have at least waited untill I got through using the toilet.

I wish I saw such good results with the Select-A-Tenna. Don't get me
wrong: It's a huge help with, e.g., my little Grundig mini-world radio,
but I find it helps very little with the 7600GR, even in the daytime.

Steve

I think most of those russian are knock offs of western radios of the day.
Look at the 60s radios -they look just like Grundigs!

> RATIO OF NEARLY TWO TO ONE.
> Got any more assinine assertions?

So we should send all our troops to Iraq. Why hasn't that happened already?

But let's look at your statistic. The size of the military was greater in
the past. And that statistic is based on the entire military. The force in
Iraq is a small fraction of the whole. So I'd surely expect the entire
death rate per year to be greater. I think your statistic is bogus.
Compare apples to apples. What is the death rate of combat personnel during
those years versus the death rate of combat personnel in Iraq now.

Actually, it's your "What if" scenario, not mine. You said :

" In order to be able to determine exactly how many Americans may have
perished in addition to the 3000 on 9/11 (that you fail to include), we
would have to go back in time and elect Gore so that there would be no
GWOT."

I never said anything about making Gore president, you did. Sorry that you
shot yourself in the foot.

> was personal autonomy? Could I be mistaken?

Well Bush is the idiot who didn't look at the traffic. You say it's not the
fault that Bush set the troops into the metaphorically speaking "traffic"
(war), but the Islamofacists that were the cars (combatants) that killed
them. Thanks for showing how wrong your point was.

>
> Similarly, if a soldier died in combat, the fault lies with the enemy
> combatant(s) that preciptated the death.

The soldier doesn't die if he's not sent into combat you idiot.

> If you attempt to illogically

Nope, I've proven how illogical your point was.

> extend the blame beyond that enemy combatant(s), then you are on the
> slippery slope that ultimately will involve you for not personally being

> directly involved in trying to personally persuade that soldier not to
> volunteer to serve. Do you accept any personal responsibility for not
> personally persuading that soldier, face to face, not to volunteer to

I don't have to. I voted for Gore. Without Bush in charge we wouldn't be
fighting an unjust war in Iraq. So I did my part.

> though I may not approve of the persons lack of integrity and poor
> character, I appreciate their support for the GWOT and the troops do too.

You like the support of people that you say are liars. That's strange. Do
you often seek out support from liars and thank liars for helping you out?

jd, once again you are transparent. If they suit your cause then you like
them. Once they stop suiting your needs then you discard them and refer to
them as liars. You'd be the type that would get a blow job from a hooker,
and then walk away telling her she was a whore.

Try aligning your moral compass that's out of wack.

>> You're transparent jd.
>>
>
> And I've proven you to be a fabricator and liar -- ergo, a lie-beral

blah blah blah. I don't care what you think jd. You've lost the fight so
all you can do is whine "lie-beral" over and over. A whining conservative
you are. I'm not surprised.

>>
>> It must irk you that you like lie-berals, because you've gotten yourself
>> in a tizzy over defending yourself.
>>
>
> And I've proven you to be a fabricator and liar -- ergo, a lie-beral,

more whining jd. Go ahead if it makes you feel better.

Wait, I'll get instant approval from you if I say I support the war in
Iraq. "Bling!" With a magic word and a wave of a magic wand I am now an ok
guy with you. But soon enough I'll be a lie-beral again when you're done
with my support.

>> I'm talking to a stump here.
>>

164 disasters in 2 years. average of 82 a year. Seven a month. Uhm, I
don't think so Charlie Brown. The disasters seem artificially padded or
high. Tell me what 21 disasters were declared in the past three months.

In 2004, Mr. Brown led
> FEMA's thousands of dedicated disaster workers during the most active

> pickup truck?

Yeah right. We can fucking liberate Iraq from thousands of miles away with
a friggin military that uses tons of fuel on a daily basis but we can't do
anything because we can't find a gas pump here. Do you know how utterly
lame and ridiculous that sounds jd. No wonder blacks felt shafted. We can
liberate Iraqis but we can't do squat for our own. This nation was looked
upon by the rest of the world with incredible disbelief.

>> Once again jd, you're good at name giving. Go ahead and show your true
>> colors.
>>

The 19 reasons that no one else knows but you.

In
> fact, you are entirely incapable of discarding the remaining 19+ reasons
> that contributed to the decision to invade Iraq. But, since it's fun to
> watch you try, I do hope you give er' one more attempt...

I'd like to give you one more attempt to tell me why we supposedly had
satellite imagery of supposed truck mounted weapons labs prior to the war,
and then they just magically disapperaed. Maybe because they weren't labs
but just speculative bullshit to make everyone thnk they had crap to kill us
with.

>> Bush's house of cards is falling. Wait for it.

Well, from where I'm standing it would be east. Unless, of course, you go
the other way around. ;)

Steve,

Setting-Up the Sony ICF-SW7600GR with the Select-A-Tenna
on a Lazy Susan for AM/MW DXing.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5886

Are you using the Select-A-Tenna and the Sony ICFSW7600GR
Positioned correctly on a Lazy Susan with the middle of the
backside of the Select-A-Tenna placed against the Left-End-Side
of the Sony ICF-SW7600GR ?

Visualize - That 'together' they sort of form a "T"
laying flat when seen from the Top.

Note - The Sony ICFSW7600GR should be Standing-Up
(Vertically) on it's Bottom.

The Sweet Spot - Then if needed you can adjust the "Coupling"
between the Select-A-Tenna and the Sony ICFSW7600GR by
creating a "GAP" (Space) between the two. Move it about a
Half Inch at a Time and try several "Distant" AM/MW Radio
Stations that are all across the AM/MW Band.

hope this helps - iane ~ RHF

I was able to stop by Radio shack at lunch time and bought the white LEDs. Sanded the entire surface of the LEDs so they looked frosted. Used three of them again across the bottom of the meter. Pointed the outside ones toward the top corners and made sure they did not tilt toward the back of the meter scale so the light is diffuse as possible. I'm happy with the results.

Careful. That's how flamefests begin. That happiness....it just
pisses some people off.

Nice touch, though...aiming the led's. And you won't have to do this
again for at least 11 years.

2843. Grayland, WA DXpedition Loggings - October 15-16

Newsgroup: rec.radio.shortwave
Date: 2005-10-18 05:08:50 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <D5OdnYbbxZn5HsnenZ2dnUVZ_sqdnZ2d@comcast.com>
Source record: 45202

This past weekend's Grayland, WA DXpedition provided some of the best-ever foreign MW DX ever logged from the Northwest USA. Reception was primarily Asian with stations from China dominating the dial, along with Japan and both Koreas. Friday night in particular was a treasure trove of Alaskans, but I couldn't get particularly excited over hearing US stations, even if they are from infrequently-heard Alaska. The MW-only guys were in high gear, however, and I heard phrases like "best ever!" and "never before heard at Grayland!" thrown around with abandon.

Work responsibilities kept me away from Grayland the first night of the DXpedition, so I arrived Friday afternoon and joined the fun already in progress. My favorite MW catches from the weekend included the Voice of Vietnam on 1242 and 675 kHz, but I spent most of the time on the tropical bands after I finally got soundcard & receiver-PC interfacing problems out of the way. (Hmm... I vaguely remember a time when DXing was just me, a receiver, and a pair of headphones :^)

Our annual Grayland "invitational" DXpeditions are more organized and slightly more formal DXpeditions compared to the smaller get-togethers held other times of the year. Eight DXers attended: John Bryant, Walt Salmaniw, Bruce Portzer, Nick Hall-Patch, Steve Ratzlaff, Chuck Hutton, Phil Bytheway, and myself. Patrick Martin and Dave Headland stopped by on Saturday afternoon for the traditional "Show and Tell" session which lasted over four hours; these sessions are filled with technical discussion and I always learn a lot from my fellow DXers.

My favorite tropical bands catch this time out was Son La, Vietnam, a station that had eluded me until this past weekend at Grayland. Saturday the 16th was the best morning by far for the tropicals, with flea-powered Indonesians Manggarai and Ngada making an appearance.

It was hard to leave Grayland after finally getting settled in and solving the receiver-PC glitches by the final night. I envy John Bryant, who had arranged to stay another three nights past the "official" DXpedition! If retirement means more time available to DX, I want my gold watch NOW! <g>

On to the shortwave loggings:

INDIA 3223, 1349-1357, AIR Shimla Oct 16 Shimla has evidently not made the move yet to 60 meters, as it's definitely still here on 3223, heard with Hindi talk by female and male announcers with subcontinental music. At 1402 I noted Shimla parallel with 3315 Bhopal running an AIR network broadcast. Fair signal. (Atkins-WA)

INDIA 3315, 1357-1403, AIR Bhopal Oct 16 Nice tabla and female vocals up to a brief pause at 1400 and into another subcontinental music selection. No sign of them on 4810, so evidently Bhopal has not made the move to 60 meters. At 1402 I noted Bhopal parallel to 3223 Shimla with an AIR network broadcast. Fair to good signal. (Atkins-WA)

INDIA 3390, 1333-1349, AIR Gangtok Oct 16 A weak signal of male and female talk found here, best on NW Beverage; language sounded Hindi. Gangtok was supposed to move to 4870, but I found only the Indonesian (presumed Wamena) on the 60 meterband frequency, so perhaps they haven't made the move yet. Poor-fair signal. (Atkins-WA)

INDIA 4775, 1139-1157*, AIR Imphal Oct 16 Usual Christian-sounding music programming of choral vocals, similar to PNG hymns or Pacific island choirs. 'Akashvani Imphal' ID at 1140 and mention of Imphal again at 1151 by male in Hindi. Brief announcement by female announcer at 1157, and off without fanfare. Nice signal just past Imphal sunset. (Atkins-WA)

INDIA 4970, 1305-1317, AIR Shillong Oct 16 Surprised to hear Shillong with a country music program, with a female announcer in English introducing songs like 'Living on Tulsa Time' by Don Williams, and 'Whose Bed Have Your Boots Been Under' by Shania Twain. 'And so, listeners, we've come to the end of our program, of our Western Music Survey... This is the Northeastern Service of All India Radio, broadcasting from Shillong on shortwave 60.36 meters and ??? kHz' heard at 1314, followed by 'Shillong Akashvani Heh' ID and into native drum and vocals. Lovely S-9 signal!. (Atkins-WA)

INDONESIA 2960, 1104-1109, RPDT Manggarai Oct 16 Weak but improving signal of female announcer with news items, brief music 1106; male announcer mentioning Indonesia Timor and other regions. (Atkins-WA)

INDONESIA 3325, 1113-1115, RRI Palangkaraya Oct 16 News items or commentary by male; frequent mentions of Palangkaraya. Good signal, and had improved to excellent by 1334 with Koranic recitations. (Atkins-WA)

INDONESIA 3345, 1116-1122, RRI Ternate Oct 16 Strong signal of bass-heavy Indonesian pops, but under the shadow of fax QRM at times. In the clear at 1315 recheck with Koran recitation. (Atkins-WA)

INDONESIA 3578.75, 1235-1301, RSPK Ngada Oct 16 Noted talk in Indonesian by two male announcers, with mentions of Kalimantan and Jakarta. Brief flute or woodwinds music 1245, followed by mention of Indonesia. Female announcer spoke across the top of the hour, but I couldn't catch an ID. Weak signal, and presumed. (Atkins-WA)

INDONESIA 3976, 1122-1130, RRI Pontianak Oct 16 Echo-filled promo for station with mentions of 'Radio Pontianak'; Ads and jingles with children and women's voices; very Western-sounding R&B pops music sung in Indonesian by male/female duet. Excellent signal on west and northwest Beverage antennas. (Atkins-WA)

INDONESIA 4750, 1132-1139, RRI Makassar Oct 16 Horribly distorted and buzzy signal! Although very strong, Makassar's signal was barely recognizable as being in the Indonesian language. Programming seemed to be a radio play or

drama. (Atkins-WA)

INDONESIA 4925, 1202-1205, RRI Jambi Oct 16 Jakarta news relay with female announcer in Indonesian, parallel to 4869.9. Very good level. (Atkins-WA)

NEW ZEALAND 3935, 1420-1422, ZLXA Levin Oct 16 Weak signal of a female announcer reading a magazine or newspaper article. Mentions of Hong Kong, Singapore, Australia, and other cities/countries. Only heard on southwest Beverage antenna. Poor-fair. (Atkins-WA)

PAPUA NEW GUINEA 3205, 1005-1030, R. Sandaun Oct 15 Presumed Sandaun on this frequency with a good signal of old US C&W music, but upon retuning at 1015 it was gone. Transmitter problems? Other PNGs noted in this bandscan with Pidgin talk and/or ID included: R. Morobe 3220, very good; R. West New Britain 3235, very good; R. Gulf 3245, fair-good; R. Madang 3260, poor-tent (vy good 10/16); R. Southern Highlands 3275, very good but heard 10/16 only; R. Western 3305, good but heard 10/16 only; R. North Solomons 3325, fair beneath RRI Palangkaraya; R. East Sepik 3335, very good; R. Milne Bay 3365, poor-tent.; R. East New Britain 3385, very good; R. New Ireland 3905, very good; NBC 4890, excellent; Wantok Radio Light 7120, fair-good. (Atkins-WA)

PAPUA NEW GUINEA 4960, 1224-1232, Catholic Radio Network Oct 16 Heard with poor-fair signal at the end of a program. 'We've now come to the end of our program, brothers and sisters,' with mention of 'diocese' and 'all Catholics in the region' by female speaker, and into hymn at 1229. (Atkins-WA)

VIETNAM 4739.7, 1211-1224, R TV Son La Oct 16 Very unusual 'hill country' native vocal music to 1216 mentions of Son La and Vietnam by female announcer in Vietnamese or lang. Male vocalist at 1220 with similar tonal singing. Quite strong signal on NW Beverage, but a slight buzz & distortion from the Son La transmitter. (Atkins-WA)

HD shows up on broadcast forums. I think the technology is dead on arrival since the service is no better than analog, but the problems it causes are great. HD on FM might be tolerable, but on AM it's just a mess. I don't have any radios that have poor enough filtering to hear the sidebands, though such radios might exist. However, the sidebands themselves will prevent you from DXing since the digital signal from the local station will drown out the analog signal from the distant station.

To be clearer, if you had a local station at frequency X, you could tune your radio to x-10KHz or X+10KHZ and hear the digital signal, so DXing the adjacent channel on either side of the local HD station will not be possible. That's for the AM BCB. I haven't investigated the effects on FM, but I don't DX FM either. At least with FM, the capture ratio might make the digital noise less of an issue, but that is speculation. The AM BCB problems are easy to hear in real life.

If someone hasn't done so, I could upload audio of what HD digital sounds like on AM, but I'm sure if you googled around, this has been done.

I run into Dr. Scott on shortwave around 6MHZ (a bit on each side of
Radio Havana).

Mark / KB9RQZ aka "an Old friend" ,
I believe that you suffer from both Dyslexia and Aphasia (also known as dysphasia).
You blame these Psycholinguistic disorders for your inability to pass a Morse code exam.
On what brain dysfunction do you blame your inability or unwillingness to learn to use a simple spell checker?
Or are you just that damn lazy?

At a quick glance it appears that you have been posting more messages to rec.radio.amateur.misc than anyone else lately, not to mention the other NG's you cross post to.
Since I can't recall anyone in any NG ever agreeing with any of the nonsense you prolifically post to numerous NG's it appears that you must have a masochistic desire to be everyone's punching bag.
Or possibly you "know you're right about everything" and everyone else is always wrong and you've made it your mission in life to "set the world straight" - No gay pun intended.
Ace - WH2T

2849. What the Eton E1 Rado is NOT ! -=V=- What It "IS" and What Not to Expect

Newsgroup: rec.radio.shortwave
Date: 2005-10-18 09:19:20 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129627160.734692.143120@o13g2000cwo.googlegroups.com>
Source record: 45208

For One and All,

What the Eton E1 Radio "IS" ! -=V=- What It Is Not
and What Not to Expect.
<http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1498>

1. The Eton E1 Radio is NOT a Table Top General Coverage High
Frequency Receiver like the Icom IC-R75 or Kenwood R-5000.
* It is a Shortwave Listener's 'portable' AM/FM Shortwave Radio.
Therefore - Expect a Lighter Plastic Case not a Heavy Metal Box.
OBWT : I Own All Three Radios.

2. The Eton E1 Radio is NOT a "Big" Table Top Shortwave Listener's
Radio like the Grundig Satellit 800 or Grundig
RTV-320U.
* It is a 'smaller' Shortwave Listener's 'portable' AM/FM
Shortwave Radio.
Therefore - Expect a 'smaller' Radio with smaller controls.
OBWT : I Own All Three Radios.

3. The Eton E1 Radio is NOT a AM/FM 'portable' Radio designed
for Big Sound Radio Program Listening like the GE Superadio I,
GE Superadio II and GE Superadio III or the GE Digital Superadio
or the GE Superadio Cassette Radio or CCRadioPlus+ with Kiwa Mods.
* It is a Shortwave Listener's 'portable' AM/FM Shortwave Radio.
Therefore - Expect a 'smaller' Speaker and a little less audio
quality.
OBWT : I Own All Seven Radios.

4. The Eton E1 Radio is NOT a AM/FM "Bed Side" Radio designed
for that "Nice & Full" Sound from a Radio with an Alarm Clock
for Music Program Listening like the Cambridge Sound Works 740CD
Radio; Tivoli Model One Radio, KLH Model 100 Radio; Sangean WR1
Radio; Audiophase SkyBox XM Satellite Radio.
* The E1 is a Shortwave Listener's 'portable' AM/FM Shortwave Radio.
Therefore - Expect a 'portable' Radio Sound and the "Nice & Full" Sound
of a Bed Side Radio.
OBWT : I Own All Six Radios.
FWIW - The Eton E1 radio also does not have the Great Old Sound
of the 'old' "Tube" Kitchen Radios like my : RCA Victor Filteramic
Model 3RC76; GE Musaphonic Model T265; Sonora Model RCU-208;
RCA Victor Model 9-X-571 Radio.

CONCLUSION :
The Eton E1 Radio is "IS" a 'portable' AM/FM Shortwave Radio designed
to be a nice sounding high quality 'portable' Radio

like the Sony ICF-2010; Sangean ATS-909; Grundig Yacht Boy 400;
Sony ICF-SW7600GR; and Grundig S350.
* Now this "IS" what the Eton E1 Radio "IS" simply a Shortwave
Listener's 'portable' AM/FM Shortwave Radio.
Therefore - Expect a nice sounding high quality 'portable' AM/FM
Shortwave Radio and you will be happy with the Eton E1 Radio.
OBWT : I Own All Six Radios.

SIDE-BY-SIDE TESTING - Of the Eton E1 XM Radio
with other 'portable' AM/FM Shortwave Radios :
ETON E1 => <http://tinyurl.com/9lfd7>

FIRST - OVERALL - If you want to know "How Good" in General
the Eton E1 Radio is; then have a Stand-a-Lone Shoot-Out
between two 'portable' AM/FM Shortwave Radios. My pick
would be the "Legendary" Sony ICF-2010 -verses- the Eton E1
Radio for Sound Quality; Signal Handling; and Overall Utility.
- - - IMHO the Eton E1 Radio WINS! over the Sony ICF-2010
as the better Overall 'portable' AM/FM Shortwave Radio.

SECOND - SIGNALS - For "How Good" the Eton E1 Radio is with
an External Shortwave Antenna try a 75 Foot Long Inverted
"L" Antenna using a Matching Transformer plus Coax Cable
Feed-in-Line and an Antenna Switch to run the two Radios
off the same Antenna and Listen to them Side-by-Side.
Now get a Sangean ATS-909 which is usually consider to be
one of the best 'portable' AM/FM Shortwave Radios when used
with an External Shortwave Antenna; and Test it Side-by-Side
with an Eton E1 Radio.
- - - IMHO the Eton E1 Radio WINS! over the Sangean ATS-909
as the better Signal Handling 'portable' AM/FM Shortwave Radio.

THIRD - SOUND - For "How Good" the Eton E1 Radio is when it
comes to Sound Quality in a 'portable' AM/FM Shortwave Radio
listen to the Grundig Yacht Boy 400PE -verses- the Eton E1
Radio. The Grundig Yacht Boy 400PE is generally considered
to have one of the best sounding Speakers of these average
size 'portable' AM/FM Shortwave Radios.
- - - IMHO the Eton E1 Radio TIES with the Grundig Yacht Boy
400PE as a Very Good Sounding 'portable' AM/FM Shortwave Radio.

FOUR - BUILD QUALITY - For "How Good" the Eton E1 Radio is
as far as Build Quality and 'feel' of the radio; after having
done the three above tests and Handling the Four Radios.
Note - They all have Plastic Cases; Small Knobs and Buttons;
LCD Displays; Whip Antennas; and small Speakers; since after
all they are 'portable' AM/FM Shortwave Radios.
- - - IMHO the Eton E1 Radio has ever-bit 'as good' Build
Quality as an the Sony ICF-2010, Sangean ATS-909 and the
Grundig Yacht Boy 400 PE.

THE BOTTOM LINE - Do these Side-by-Side Tests of these Four
'portable' AM/FM Shortwave Radios and then Decide for Yourself.

IN SUMMARY - The Eton E1 Radio - Hey its just a 'portable'
AM/FM Shortwave Radio; and a very good one at that [.]

RATING : I Rate the Eton E1 Radio as a "5" out of '5' ! (5/5)

e1'ing you all ~ RHF

Some great logs there Guy, congratulations and well done.
Those low band Tropical's from India are particularly impressive.
They are 7,500 miles away and the path lies over Russia and China.
= great!

Seems like you fella's sure had fun

Yeah, I've tried them in just about every conceivable orientation that will permit coupling between them. Interestingly, if I switch in some attenuation on my SW77 I find that the Select-A-Tenna is useful at cleaning up signals, especially during the daylight hours. However, I have little luck with the 7600GR. I don't know what the problem is, but it may have something to do with my listening environment. It's not a big deal....there's plenty I can hear using just the 76000GR by itself.

Steve

That may or may not be the path. It just might be via the crooked path along or close to the grey line during that time frame.

I usually find that type of path to generally be the mode a couple of hours earlier here.

The signal(s) from that region seem to come via the SW at that time.

Hello - Shortwave Listening is the Hobby of Listening to
Shortwave Radio Broadcasts. Yes it is as simple as that :o)

Shortwave Listeners, or SWLs, do not transmit,
in contrast to Radio Amateurs (Hams).
http://en.wikipedia.org/wiki/Shortwave_listening

International Shortwave - What Is International Shortwave ?
http://www.cybercollege.com/frtv/frtv021.htm

Shortwave => http://en.wikipedia.org/wiki/Shortwave

DX (DXing) => http://en.wikipedia.org/wiki/DX

QSL, or QSL Card => http://en.wikipedia.org/wiki/QSL

eQCLs => http://www.eqsl.cc/qslcard/Index.cfm

International Broadcasting is broadcasting deliberately
aimed at a foreign, rather than a domestic, audience.
It usually is broadcast by means of longwave, mediumwave,
or shortwave radio, but in recent years has used direct
satellite broadcasting and the Internet as means of
reaching audiences.
http://en.wikipedia.org/wiki/International_broadcasting

be safe & keep your antennas up - iane ~ RHF

You're right Drakeman, they should have called a cab to get a ride home. Or
maybe to a nice hotel where they could have showered, rested up, then dined
out. Too bad they were so stupid.

International Broadcasters are abandoning HF as it costs too much and
very few people listen.

My shortwave listening is usually aircraft with a hundred Watts or so.

If they want to leave, they can leave. There's plenty of other stuff to
listen to.

I sort of wish that CRI would leave. They're on too many frequencies
and chew up too much bandwidth.

Steve

Steve <

Yeah, it wouldn't be so bad if all of their broadcasts originated from
the homeland, but these guys are everywhere. They must be desperate.

Not crazy about the rash of US broadcasters either - they frequently
get in the way.

Since they're CRI, I think they're more bureauegocratic than desperate.
Consider the history. World's Biggest Airplane!! Most Pure Weapons Grade
Uranium!! World's First Supersonic Flights -- to nowhere!!! When the
Commie Leader says "Jump!", the hapless worker better know how high.

And if some People's Commisar thinks it would be nifty if China were to
become the World's #1 producer of QRM, it WILL happen.

Don't you know some of them can be very entertaining? Oh, wait. You did
use crazy and US broadcasters in the same sentence. Very clever.

I wish all the preachers would move to satellite, just getting rid of them would be a huge improvement.

You mean you dont want to listen to brother scare and the late gene give me
more money scott<G>
that is the best part of listening.

As far as I know JJY has been gone from shortwave since March 2001. I believe
they only operate on 40 and 60 kHz now.

Don't count on that, anytime soon. Given the suits against XM for
failure to support a particular Christian channel, there'll be more
lawyers than ever involved in satellite broadcasting.

>>rate of 1,286 per year exceeds the rate of combat deaths in Iraq by A
>>RATIO OF NEARLY TWO TO ONE.

FDR wrote:

> I think your statistic is bogus.

It may or may not be bogus, but it *is* totally irrelevant. Hard to
believe that jd is still beating that tired old horse. Let me explain...

Many on this NG contend the Iraq war is *ILLEGITIMATE*.

One of -=jd=- 's stock responses has always been "Oh, but more people
are killed in peacetime, blah, blah, blah...". [see above]

Totally irrelevant--*illegitimate is illegitimate*. Period [.] No matter
how many or how few died. It's *still* an illegitimate war.

P.S.

jd, If you keep insisting on bringing up peacetime deaths as some kind
of perverse justification for a bogus and illegitimate war, that's only
a portion of the picture. At least have the decency to remember the
T-O-T-A-L human cost--16 or 17,000 American youth that have been
maimed and mutilated.

Dear David,

I too have a Sangean ATS-606AP though it's "retired" now; its microprocessor was starting to "go" - the internal quality of Sangean radios is not all it should be, at least in my experience with two Taiwan-made units (the '606AP and an '818A. Formerly my travel radio, the Sangean has been replaced by one of my Sony ICF-SW7600G receivers.

However, while my '606 was still functioning properly, I tried using the Sangean wind-up antenna (via its 3.5mm plug), a Sony AN-LP1, and an AOR WL-500 Window Loop.

While the wind-up antenna didn't improve things very much, the AN-LP1 and the WL-500 improved reception noticeably; the WL-500 was superior to the AN-LP1.

I certainly wouldn't suggest that you buy one of the above just on my say-so, but if you have an acquaintance who has one of them, why not try it? I think that you will indeed notice a major improvement in your radio's performance.

My Sony ICF-SW7600G and 'GR models are easily as sensitive (if not more so)
with the whip as the Sangean ATS-606A and the Sony's synchronous selectable sideband circuity makes listening much more pleasurable.

Any radio's reception will improve with a suitable auxiliary antenna.

Best,

Joe

Well I did pay attention and it stunk! Price not going hi enough so
I'll claim a problem and pull the auction.
If it quacks like a duck and walks like a duck then it must be.
There are waays to protect his investment, like "reserve".

Thanks. I can hear Bangalore on it in the daytime if I'm outside (I'm
in Los Angeles County). I've added a couple clip leads to the whip in
hotel rooms. I understand the principle.

I think my main point is to use serious antennas you need a
more-than-portable receiver.

Please notice that I said *still* beating the horse...

The reason I used the word "still" is that when you and I chased around this tree several weeks ago, *you* brought up the same irrelevant argument about "peacetime" military deaths back then.

You are the one who keeps quoting the number of peacetime military deaths, which don't have a damn thing to do with anything, much less justifying a war.

Again, if you feel compelled to keep quoting this peacetime death statistic, at least please have the decency to also account for the 17,000 maimed and mutilated in your "statistics".

I seriously doubt that the broadcasters that abandon shortwave will be able to survive in a more commercial medium, simply because their programming doesn't have the broad appeal required (i.e., it tends not to be sufficiently crappy). Either they'll have to shut down altogether or they'll have to change...to become more 'commercial'.

Steve

> for a really enjoyable topic(s).

I can commiserate with Koikus on this one. Tropical bands always were (and are) my favorite DX. A lot of it is the incursion of the bible-thumpers, but other nations (who technically aren't suposed to be using those bands) are some of it too, along with the tropical band countries themselves, especially the Spanish-speaking ones. Some of my favorite DX came from countries where their governments heel in the back of the stations neck is a big factor, or sometimes simple lack of funds have eliminated them (Venezuela is a perfect example of both). Also, beacons and other traffic - especially in 60 meters, adds to the problem. One can only hope things will improve in the future, but I'm somewhat skeptical . . .

Tony

Before you throw mud about Iraq and "Patriotism"....

READ THIS --> http://cbftw.blogspot.com/ (A solder exposes the TRUTH about Iraq)

Blogs offer view of soldiers' lives
By Ellen Simon
The Associated Press

Spc. Colby Buzzell's squad was on a mission in a
poor neighborhood in Mosul when two Iraqi boys
ran up carrying old artillery shells. "Give me dollar!" they said.
Another came carrying bullets and demanding money.
"Then, all of a sudden, this really skinny Iraqi kid comes
running up to us with a ... HAND GRENADE in his hand,"
Buzzell wrote on his war blog. " 'Drop the ... hand grenade!
Drop it now!' We all started yelling. The little kid, still with
this proud smile on his face that said, 'Look what I just found'
just dropped the grenade on the ground, and walked over
to my squad leader and said, 'Give me money!' "

The grenade didn't go off.
The squad leader (..later) explained to his men that an
Army division that had been in the area earlier
had paid children for weapons or unexploded ordnance.

For Buzzell, it was grist for his online war diary,
cbftw.blogspot.com, whose fans range from soccer
moms and truck drivers to punk band leader Jello Biafra.
Before the Internet traffic counter dropped off the
site, Buzzell said, he was getting 5,000 hits a day.
Iraq war blogs, or Web diaries, are as varied as the
soldiers who write them. Some sites feature practical
news, pictures and advice. Some are overtly
political, with more slanting to the right than the

left. Some question the war, and some cheer it.

Buzzell and a handful of others write unvarnished war reporting.
A few of these blogs have been shut down. Buzzell, an infantryman
in an Army Stryker brigade, says he was banned from missions
for five days because of the blog and has stopped adding narrative entries.

For the folks back home, the soldier blogs offer details
of war that don't make it into most news dispatches:
The smell of rotten milk lingering in a poor neighborhood.
The shepherd boys standing at the foot of a guard tower
yelling requests for toothbrushes and sweets. The giant
camel spiders. The tedium of long walks to get anything
from a shower to a meal. A burning oil refinery a hundred
miles away blocking the sun. A terrifying night raid surprised
by armed enemies dressed in black.

On the blogs, soldiers complain, commiserate
and celebrate their victories and ingenuity.
What do you do if the electricity goes out while
you're sitting in the latrine, leaving you in complete
darkness with a dead flashlight? Blog answer:
Reach into your cargo pocket and crack open a Chemlight.

The blogs offer more than war stories. They offer
images from Iraq not seen elsewhere, like a sign
in an office with no air conditioning: "We're in the
desert. The desert is hot. Now quit your whining."
Sean Dustman, a 32-year-old Navy corpsman
from Prescott, Ariz., who worked alongside the
Marines in Iraq, started writing his blog,
docinthebox.blogspot.com, after reading other war blogs.

"I was entranced with their stories," said Dustman, who
recently returned from six months in Iraq. "This was
where the real news that mattered to me was coming
from, unlike what you saw through the regular media.
Reading them [the blogs] helped me and my Marines
prepare for the trip." A recurring theme is the flashes
of military absurdity, such as the hurried martial arts
training some Marines undergo before they leave Iraq.

The Pentagon has "no specific guidelines on blogging
per se," said Cheryl Irwin, a Defense Department
spokeswoman. "Generally, they can do it if they are
writing their blogs not on government time and not
on a government computer.

Thursday, June 24, 2004 - Three Loud Explosions
" I can hear small arms fire right now coming from
outside the wire as I write this entry. On my way

to the internet cafe that they have set up for us
on this FOB (Forward Operating Base) I heard
three loud explosions, about 5 minutes apart,
followed by some breif small arms fire. We have
cement mortar bunkers set up for us all over this
FOB for us to seek cover in during an attack.
From a cement shelter I observed three very large
dust mushroom clouds from right outside the wire
from where the explosions took place. You could
feel the concusion of the explosions from where I was
standing. No word yet what just happened. The craziness begins..."

Well, that explains it! I thought the move was supposed to happen on October 10.

Still, it's always fun to hear India on the lower bands.

I agree with your comment that Indian signals sometmes come from the SW due to a skewed path. Sometimes at Grayland the SW Beverage is the best for the subcontinent. On this DXpedition, however, reception was about equal on the NW and W wire.

Guy

Come up with a statistic of the number of soldiers getting constipation now vs. then for all I care. Your statistic is apples to oranges and you know it.

I'll

If you're going to regurgitate a statistic, make it apples to apples. You come across as a fool that hasn't thought one bit about what you're repeating.

Yep, I recall that. And no where does it say that Gore was President. jd, you're losing it. Much like Larl Rove is.

> In order to answer your question, we have to
> *imagine* some scenario where the troops never get deployed off US soil and
> there is no GWOT. The best chance for that happening is if Bush was not in

You could make that assumption. I didn't. We could easily assume that 9/11 never happens and Bush never starts this GWOT.

So once again jd, I never said anything about Gore being President, you did. jd, you're losing it my petite flower.

> Then I needed to find the peacetime death rate figures

>>
>
> Then he shouldn't volunteer to be a soldier as combat is what we rely upon
> soldiers to "do".

Soldiers are there to protect us, and as any leader knows, you send kids to get killed as the last resort. For Bush it was the first resort. Bush vehmently wanted war at all costs. The soldiers sent weren't there to protect us becuase there was no immediate threat.

> Did you think that a soldiers only purpose is for a global
> "meals-on-wheels" program, you bigger idiot ;-) ? It wouldn't surprise me if

Carter vs. Bush in 2000. Since Bush ran against Gore, I don't see how voting for Carter in 1976 had anything with keeping Bush out of offiice 24 years later.

> I'm off the hook too!!
> Your squirming is becoming really noticeable now. Try again, sunshine!

jd, you're inasane. You blabber about being so logical yet you make such stupid ass statements.

How does someone that is characterized by you as a liar be able to be sincere? A sincere liar? You sound silly jd.

> Try again, sunshine!

No you.

>
>
>>
>> Do you often seek out support from liars and thank liars for helping you
>> out?
>>
>
> I didn't seek out anything. They freely offered it without me or anyone else
> asking them to do so.

How did you know they weren't lying about it? They are all liars in your opinion. Oh wait, they aren't liars when they support your cause. Then they magically become sincere. jd, you are transparent.

> If they want to set aside differences for a moment and
> freely offer to sincerely express their support, I have no problem with that.
> Try again, sunshine!

Sincere when they support your cause, liars the rest of the time. Got it jd!

>
>
>
>> jd, once again you are transparent.

Actually, the link doesn't go back to a government website. Instead it goes to a website where it's the ramblings of somebody who does not show where he got those numbers. Try again. You don't even read what you mindlessly regurgitate.

I know that we could have easily gotten food and supplies to them by air when they were critically needed. We do have airplanes and helicopters, remember? Then again, Brown didn't even know that there were people trapped when it was all over the news.

It's Alive... http://www.imdb.com/title/tt0071675/

2920. Usually a 'shorter' 30-35 Foot long Random Wire Antenna works better with most 'portable' AM/FM Shortwave Radios

Newsgroup: rec.radio.shortwave
Date: 2005-10-19 07:19:46 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129706386.692546.158820@g47g2000cwa.googlegroups.com>
Source record: 45132

David,

I would agree that most of today's 'portable' AM/FM Shortwave Radios work much better with a 'shorter' Random Wire Antennas about 30-35 Feet long. When a 100 Foot Antenna is used often the 'portable' AM/FM Shortwave Radios exhibit signal overload and image problems.

IMHO - If the Random Wire Antenna uses a Matching Transformer and Coax Cable Feed-in-Line then the Length of the Wire Antenna Element can be extended to 45-60 Feet.

Source record: 45133

BD,

Well in your opinion what new 'portable' AM/FM Shortwave Radios
and Table Top Receivers are out-there to compare the Eton E1
Radio to ?

Grundig Yacht Boy 400 PE
Sony ICF-SW7600GR
Sangean ATS-909
Sony ICF-SW77
Palstar R30
Yaesu FRG-100B
Grundig Satellit 800 Millennium

Compare the Eton E1 Radio to the Grundig Satellit 800-M Radio
or the Icom IC-R75 on its technical merits in the actual area
of Receiving Performance or simply 'your' impression of he Radio.

But please don't say that the Eton E1 Radio does not 'sound'
as good as the Grundig Satellit 800-M Radio.

Also please don't say that the Eton E1 Radio does not 'feel'
as solidly built as the Icom IC-R75.

Simply keep in mind that the Eton E1 Radio is a high priced
{high quality} consumer-grade 'portable' AM/FM Shortwave Radio.

READ - Yes ! - The Eton E1 Radio does have a Plastic Case
and is made of Plastic Parts

What I'd expect is for the E1 to be comparable, performance-wise, to the SW77 or the Sat 800. I would not expect it to be comparable to either the Icom R-75 or the Palstar, though I know it does have some advanced features. Is this a fair assessment? I haven't been able to sit down with an E1 to see what it can do, but I'm curious.

About two months ago,I saw an advertisement at www.shop.com of an portable little AM/FM/Shortwave radio priced at over $700.00,about $735.00,I think the ad said.I don't see how any little AM/FM/Shortwave radio (especially in mass production) regardless of the so-called (plastic is not build quality) "build quality" can be worth $500.00 or more.Sony 2010's and Sony 7600 GR's are a much,much better buy in my opinion,for small AM/FM/Shortwave radios.

Internment camps are one of the many SW radio topics in which I cannot absolutely prove to be false. If there is, in fact, a huge network of Globalist internment camps, I'm sure they will be staffed with minions of the New World Order, and filled with detainees who are suspected of being on to the game.

At best the "clever people" will end up in the camp in which Col. Alex Jones continually outwits Commandant Hannity and Sgt. Limbaugh. But it seems far more likely that they'll end up in camps such as the one run by "Hillary, She-Wolf of the N.W.O."

I'm sure we both can agree that when the likes of Nero and Caligula again come to dominate the world, it's best to put on the Claudius act. So, ixnay on the ever-clay, OK?

From: bpnjensen <bpnjensen@yahoo.com>
Message-ID: <1129738964.530268.199910@g47g2000cwa.googlegroups.com>
Source record: 45006

>From Weather.com:

>>It's been confirmed: Hurricane Wilma, with a pressure of 882 mb, is the most intense hurricane on record in the Atlantic Basin. Wilma, after undergoing a stunning intensification overnight, is now a potentially catastrophic Category 5 hurricane packing sustained winds of 175 mph. The eye of the violent storm continues to follow a wobbling WNW track through the western Caribbean with a turn toward the NW expected during the next 24 hours.

Fluctuations in intensity are likely, but Wilma is forecast to remain an extremely dangerous Category 5 hurricane through Thursday. The projected track of the storm takes it through the Yucatan Channel into the extreme southern Gulf of Mexico Friday. After that, Wilma is expected to come under the influence of westerly winds aloft blowing across the Gulf. That should hurl the hurricane toward the Florida Peninsula, probably the southern part of the peninsula, this weekend. Wilma is expected to be weakening by then, but weakening is a relative term and Wilma may still be a major hurricane (winds over 110 mph) when it makes landfall.

Meanwhile, in the Caribbean, Wilma's downpours will continue to lash Cuba, the Cayman Islands, Jamaica, Swan Island and areas from Honduras northward to Yucatan Peninsula. As much as 25 inches of rain may unload on the mountainous terrain of Cuba through Friday.<<

Should be exciting!

How about comparing it to the older 'real German' Grundigs or the ICF- SW77 for build quality, sensitivity and sound? It would be nice to know how it measures up to the expensive rigs.

www.devilfinder.com Virtual tour Eton Radio factory in India

Well,I don't know,,,, there just might be a virtual tour somewhere on the internet.Did Drake have a virtual tour,or does Ten-Tec or Palstar? I have worked in factorys before and sometimes there would be some tour groups touring around.When I was a kid in school,we once toured the Coca Cola bottleing plant on Highway 80.We got a free Coca Cola and a free hamburger too.

It involves a network of radios which transmit a coded signal on each of a number of frequencies in a list, while listening for signals from other radios. The idea is to facilitate communication among people who don't know anything about propagation, by just trying and finding frequencies that work. It is used by the military and other government agencies and there is limited use by hams. There is a free piece of PC software that implements it with ham transceivers; otherwise it may be built into the radios.

To learn more than you want to know about ALE go to

2954. sony 2010 - what replaced it?

Newsgroup: rec.radio.shortwave
Date: 2005-10-19 18:54:51 UTC
From: clu <sconnet@gmail.com>
Message-ID: <1129748091.466078.173160@f14g2000cwb.googlegroups.com>
Source record: 45016

I am new to this and have been looking at a lot of reviews. It appears, for my needs, the Sony 2010 is a real winner. But it is no longer available for purchase.

Has there been a Sony model to replace it? The only model I can find is the ICF-SW7600GR. Is this intended to be the replacement? I read reviews on it and read that it is not quite as good as the Sony 2010.

If I wanted the Sony 2010, what product should I get that comes closest to quality/value as the Sony 2010?

The Sony ICF-SW77 replaced the 2010, but the SW77 is no longer manufactured. You can find them on ebay most of the time, though.

I'm told that Sony doesn't intend to make a successor to the SW77.

Since one cannot buy a new Sony 2010, or SW77, how does the SW07
compare with the SW7600GR? It's more expensive but is it better? From
the reviews I've read so far, it doesn't appear to be better. ??? I'm
about to make the SW7600GR purchase for $150 at amazon.com and just
want to make sure I'm getting the best for the buck, so to speak.

2958. Re: sony 2010 - what replaced it?

Source record: 45020

Sony's ICF-SW07 is the company's current flagship shortwave receiver.
Performance-wise, it's really not appreciably different from the
'SW7600GR, in my opinion (the small size is nice, however).
Since neither the ICF-SW07 nor the SW7600GR is quite in the same class
as the '2010 or 'SW77, I think you'd do well to look at the Eton E1.
Admittedly, it's on the higher end of the price scale where portables
are concerned (although not that much higher than the 'SW77 back when
it was sold new). Price aside, however, if the '2010 is the type of
radio you're looking for (high performance, full featured portable) and
you're looking to buy new, then the E1 is about the only option out
there. And, thankfully, it seems to be a very nice performer,
according the buzz out there.

Source record: 45021

The SW7600GR provides excellent bang-for-buck. One of the best buys out there, actually. Although it's not quite a '2010 or 'SW77, I would consider the 'SW7600GR a best value in a compact travel-weight/size portable.

See if www.jr.com is still selling Sony 7600 GR radios.Last time I
checked jr.com a few months ago,they were selling for about $139.00.

www.devilfinder.com J&R Music Company Sony 7600 GR Radios

If you are interested in buying one of those Sony 7600 GR radios,look up
J&R's toll free phone number and ask them about the radios,and your
credit card or debit card handy.I think J&R has free shipping too.

If you are interested in the survival of this hobby you should do
business with a radio hobbyist retailer like Grove or Crane or
Universal or HRO,etc., rather than a big box store that doesn't give a
shit if we all go away.

I would agree.. Consider getting it (Sony 7600) at a shortwave
store..

C Crane sold me a Sangean 606A years back,
- then put in sensitivity mods; replaced the antenna , etc.

Sony 7600, Computer speakers or good headphones
and an external antenna should do 99% of what you want in a SW receiver
. .

I guess Sony could start reproducing the Sony 2010's again if they wanted to,,,, assuming parts are still available,and I believe they are.Sony could dress them up in a new plastic dress though and perhaps add one or two other features.The Sony 2020's perhaps?

2977. Read the Review of the Etón E1 AM/FM Shortwave Radio - by Jay Allen on RadioInte.Com

Newsgroup: rec.radio.shortwave
Date: 2005-10-19 22:04:16 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129759456.545396.215840@g49g2000cwa.googlegroups.com>
Source record: 45039

BD,

Read the Review of the Etón E1 AM/FM Shortwave Radio / Receiver
- by Jay Allen on Radio Intel . Com
http://www.radiointel.com/review-etone1.htm
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1528
He compares the Eton E1 Radio to :
* Grundig Satellit 800 Millennium
* Sony ICF-2010
* Sony ICF-SW77

OBTW - Be sure to Click-On the : [Click Here to see some more photos,
including internal, of the Eton E1 by HongKongRadioer] Link at the
bottom
of this webpage.
http://220.189.230.172/web/leowood/forum/forum_read.asp?id=1142419&page=1&property=0&Class
ID=0

FWIW - I had read Jay Allen's fine Review about three times before
doing my own brief Side-by-Side in the Park with the Eton E1 Radio
and the Sony ICF-2010 Radio. My 'impressions' of the two Radios
paralleled Jay Allen's findings.
* Yes - The Sony ICF-2010 Radio is the "More Sensitive" radio.
* Forever - The Eton E1 Radio has more built-in "Features" (Tools}
to Listen with 'to hear' difficult-to-hear signals.

Once Again - Read Jay Allen's "Review" of the Etón E1 AM/FM Shortwave
Radio.
- - - Hosted on Radio Intel . Com
http://www.radiointel.com/review-etone1.htm
.

Hurricane Wilma seems completly un natural to me.I don't believe the water in the Gulf Coast areas are all that warm this time of year as they were when Hurricane Katrina and Hurricane Rita was there.The weather here in Jackson,Mississippi is quite cooler in the day times and night times now than when it was a month or two ago.

> add one or two other features.The Sony 2020's perhaps?

Not likely. The 2010 was an odd design. Sony had dropped the ICF-2001
design in favor of the smaller ICF-2002. When they finaly realized that
the 100's of AM-Stereo receivers they were selling a year would never
use up their supply of decoder chips, they looked for an alternate
solution.

What they came up with was the ICF-2010. It was a much improved ICF-2001,
with the AM stereo decoder chip used as a sync detector. A brilliant idea,
they ICF-2010 sold like hot cakes when it first came out (around 1986-87)
and was still sold well into this decade.

However they eventualy ran out of chips. To make a replacement would require
the development of a new sync detector chip. This would push the price of
a 2020 as you called it well over $500 a unit.

Actualy at that price it would be a bargain, I paid close to $400 for a
2010, air freighted from Japan before they were available in the U.S. Of
that over $350 was for the receiver in 1987 dollars. In 2005 dollars, it
would be a lot more.

How many people would buy a radio at that price? Certainly enough to
make it the talk of this newsgroup. But would it be enough to pay
of the development costs?

Geoff.

CLU,

If you are interested in a 'replacement' for the Sony ICF-2010
and Sony ICF-SW77 Radios :
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1531
THINK {Consider} the new Etón E1 AM/FM Shortwave Receiver
with XM Satellite Radio.

You should "Read" the Review of the Etón E1 AM/FM Shortwave Radio
- by Jay Allen on Radio Intel .Com
http://www.radiointel.com/review-etone1.htm
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1528
He compares the Etón E1 Radio to :
* Sony ICF-SW77 { Discontinued }
* Grundig Satellit 800 Millennium { Still Being Made }
* Sony ICF-2010 { The Legend - But No Longer Being Made }

Also - Another Must Read Is -Dr. Phils Side-by-Side Comparison of the
Etón E1 AM/FM Shortwave Radio with the Grundig Satellit 800 Radio.
http://www.radiointel.com/phil/e1xmvssat800.pdf

BD,

Build Quailty ?

The 'new' Etón E1 AM/FM Shortwave Receiver with XM Satellite Radio
-=V=- http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1534
The 'older' Grundig Satellit 500 and 700 Radios

I do not know of a 'portable' AM/FM Shortwave Radio being made
today that can compare to the Build Quality of one of the 'old'
Grundig Satellit 500 and 700 Radios.

TBL - The Build Quality of the Etón E1 AM/FM Shortwave Receiver
with XM Satellite Radio is as good as (IMHO Better Than Most)
any Plastic Cases 'portable' AM/FM Shortwave Radio being made
today [.]

But - IMHO - The Performance of the Etón E1 AM/FM Shortwave
Receiver with XM Satellite Radio is 'superior' to both of the
above 'older' Grundig Radios.

FWIW - I do not own a Grundig Satellit 500 and 700 Radios;
and I have only handled and play with (listented to) a Grundig
Satellit 700 Radio for a few hours about a two years ago.
A very impressive Radio. Note - This guy had gone through
three eBay Grundig Satellit 700 Radios to find a keeper.

The Harris RF-series get very high marks. I have been thinking about
getting an RF-550 for awhile now. It wouldn't be a portable, alas...
;-)

No. I was being sarcastic. Sorry it went over your head. I heard the same
reports everyone else did. I don't remember exactly where (on which
network/which show) I heard about the snipers shooting at helicopters. I do
know most of those kinds of reports were prefaced with "officials tell
us..." or "we're hearing reports...". If they were unsubstantiated the
reporters should have said so.
>

"We were coming in from a parking deck at Tulane Medical Center, and a guy in a white shirt started firing at us," [Dr. Tyler] Curiel said. "The National Guard [troops], wearing flak jackets, tried to get a bead on this guy. "

"We got back to Charity Hospital with with food from Tulane and we said, 'OK the snipers are behind us, let's move on,' " Curiel said. "We started loading patients [for transport] and 20 minutes later, shots rang out."

Looks like direct quotes to me. Attribution. Dr. Tyler Curiel said...

Then the story goes on to say: 'The National Guard soldiers told staff to get away from the windows, and evacuations were halted.' Hmm, where's the part about evacuations being halted after the helicopter contractor saw reports on CNN? Is it possible your Mr. Gupta is mistaken? And about those two unfortunate people that died, would they have survived if they had been evacuated? A lot of people died in NOLA and, certainly, some of them could have been saved if only...

It's just my personal opinion that "Media Lied and People Died" is sensationalistic, unsubstantiated horseshit. I'm sorry if that offends your conservative sensibilities.

I don't buy that story. They could run another lot of the chips if the
process was still available, or use a newer chip like the one in the 7600GR.

There are other components that may not have been available. But Sony
has a suitable sync detector chip still in production.

David Asks - " Why 'no' AGC ? "

REF - Deutsche Welle (DW) News Link on 690 kHz in English
via CBU in Vancouver, BC => http://tinyurl.com/9s4pv

WHY "NO" AGC ? - - - Why Turn the AGC "Off" ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5914

Sometimes with a very weak signal on the Coax Cable {Shielded}
Loop Antenna where the S-Meter reads a Flat "0" {Zero} with
Fair Audio (No Pre-Amps)

It has been my experience that 'sometimes' by Turning "Off"
the AGC the Listenability of the Radio (RF) Signal will show
improvement with very weak signals. YMMV !

Hence the SIO Code : 3.4.3

S = Signal Strength = Fair for the Consistant Strength
of the Signal not the S-Meter Reading.

I = Interference from other stations like local SF Bay Area
Sports Talk Radio on 680 kHz.
KNBR AM 680 kHz => http://www.knbr.com/

O = Overall Quality = Fair

More about KNBR AM Sports Talk Radio 680 kHz :

FCC Clear Channel 680 A,B,D KNBR @ 50 KW {Unlimited}
San Francisco, CA: Class A (I-B)
http://www.fcc.gov/mb/audio/amclasses.html
http://www.csgnetwork.com/amclearradiotable.html

KNBR @ 50 KW uses a single "ND1" Non-Directional Antenna
http://www.fcc.gov/fcc-bin/amq?list=0&facid=35208

KNBR @ 50 KW is about 25 Miles due South of My QTH.
KNBR TX MAP => http://tinyurl.com/8n4dh

SF Bay Area Radio Stations - presented by TV Radio World
http://www.tvradioworld.com/region1/ca/webcasters.asp?m=sfr

SF Bay Area Radio Digest => http://www.bayarearadio.org/blog/

HELLO EVERYONE - So Am I Doing Something Wrong ? - Comments ?

QUESTION - Is Turning "Off" the AGC a valid Listening Technique
when Listening to Weak Radio Signals ? ? ?

hope this helps - iwtk ~ RHF

Its also to rare to be used in amateur radio....Mostly MARS stations are dreaming of this stuff but due to the transmit recieve ratio its doubtfull many will like it. You need a great commercial rig to run it any length of time as your radios get very HOT!

The software works nice but unless you dont care about your rig I wouldnt recomend it to anyone!

Also a cheap rig won't do.....you need a mid range to top of the line rig as the software changes frequencies to find good propagation for the links. Cheap rigs wont do this.

I"ve dealt with C Crane, Grove, Universal, and directly with Ten-Tec.

No complaints. No hiccups. Prices good, service quick and smooth.

Universal, it may depend on who you talk to. Ten-Tec, the same.
Personally, experienced no problems with any of them.

3012. Two Do-It-Yourself "Kits" for Ten-Tec : RF Pre-Amplifier and Active Antenna

For One and All,

Two Do-It-Yourself "Kits" for Ten-Tec : RF Pre-Amplifier & Active
Antenna

Here are two Do-It-Yourself "Kits" for Ten-Tec :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5920

Ten-Tec Kit # 1001 - Universal Low-Noise Broadband
DC to 1 GHz RF Pre-Amplifier
http://radio.tentec.com/kits/Accessory
Broadband, Un-Tuned RF Pre-AMplifier. 50 ohm input, 50 ohm output. THIS
one is your best buy! Excellent noise figure, gain and frequency
coverage at a BUDGET PRICE. Up to 18.5 dB gain at 100 MHz. 17 dB gain
typical at 500 MHz. Supply voltage: 8-14 VDC.

Ten-Tec Kit # 1552 - Active Antenna for Receivers
http://radio.tentec.com/kits/Receiver
If you've been curious about what an "active" receiving antenna can or
cannot do, without paying the -0 cost typical of both kit and
manufactured units, you will enjoy the experience of building, learning
about and using this very simple, budget-priced kit. You'll get the
performance without the price tag! Bring any HF receiver to life with
the 1552 and a small length of wire, or a simple whip antenna! Compact
1.75" square board can be mounted inside receiver or in its own small
box. Circuit includes gain control; operates on 6 to 15 VDC.

So... Has anyone used one of these and what were your results ?

- - - Are they easy to build ?

- - - What Antenna Project did you use them in ?

i want to know - iane ~ RHF

I did the wideband amp. With modifications, used it as a distribution
amp.

Insanely easy to build. Low noise, good results. And I've used for MW
for live air monitors, HF and VHF monitoring and recording.

You need to put it in the proper case. Ten-Tec has one of the best
sheet metal production lines in the business.

J & R is not a big box retailer, they are a privately-owned one-store retailer in Manhattan. Yes, in person, it's a brusque New York attitude type of place, but they have a great reputation, and any time I buy electronic equipment, I try there first. They almost always have the lowest price from a reputable dealer. Shut Up. ---Ken

> them.

Statistics are facts. Except the facts (statistics) you present are apples
to oranges so have no meaningful way to answer if troops are less prone to
get killed in Iraq vs. that peactime period. Go back jd and insetad of
parroting some right wing website, do some real research if you want to
present that case.

>
>
>
>>> I'll keep that in mind the next time you start regurgitating.
>>> In any event, It isn't *my* statistic and I place no stock in

> Here's a free tip for ya: they are *all* apples and oranges, you
> dimwit! LOL!!

Once again, I assert my statement. No poll is ever accurate. Many have
margin of error of +/- 4 %, which is pretty big. Conservatives start noting
the error when Bush's polls have gone down saying that it's ok because of
the margin of error and he's still as popular as ever.

>

Ok, don't read the article. If you have some websites or things you want me
to read in the future I will likewise ignore them, since that's the way you
want to play.

So far I've actually cared to look at the sites you've posted and I've
addressed them after reading them. You don't care to do the same because
you either don't care or just have a "know it all attitude". You certainly
don't come across as an intellectual, even though you think you are.

>> and as any leader knows, you send kids to get killed as the
>> last resort.
>>
>
> As any *COMPETENT* leader knows, the best defense is a strong
> offense

No jd. That's where you're wrong. They still call it the Department of
Defense. Not Dept. of Offense.

> when faced with an enemy that has been allowed to
> repeatedly attack us without suffering any consequence following
> 20 some-odd years of various prior non-military efforts have
> failed to abate the threat in the least.

We did make the enemy suffer when we rightfully invaded Afghanistan to
destry the Taliban and the base of Al-Queda operations. We were attacked
and we took the enemy out.

Iraq is a different story and all of America is realizing that it was a
mistake to go there. An overwhelming majority think the war is a mistake.
We were misled and the country was nowhere near being the immediate threat
that it was portrayed to be. Bush used our fear of 9/11 and terrorism to
make us think we needed to go to Iraq. We're wiser now.

> It was well beyond time
> to allow our soldiers to not only do what they had been trained
> to do, but what they *WANTED* to do! I know this in dealing with
> so many soldiers as part of my job. You couldn't *possibly* know

Yep, you sound like quite the intellectual.

>
>
>
>> For Bush it was the first resort.
>
> It was the first thing he did, right after we were attacked in a
> manner that not even the Germans, Japanese or Russians *EVER*
> managed to do.

I guess Pearl Harbor never happened.

>
>
>> Bush vehmently wanted war at all costs.
>
> I can't blame him after Al-Q's teeny-tiny little anger episode.

And goint to Afghanistan was right. Iraq was srong.

>
>
>>
>> The soldiers sent weren't there to protect us becuase there was
>> no immediate threat.
>>
>
>
> They were sent to prosecute part of the GWOT. Didn't you get the
> memo from koz and DU?

If it's a global war, then why haven't we invaded more countries around the
globe? No jd, it's not a global war on terror. It's Bush's ego in invading
Iraq for his personal reasons.

>
>
>
>>> Did you think that a soldiers only purpose is for a global

You have no problem because they supported your cause. If you thought they were sincere, you were being hoodwinked because they were lying to you. Really jd, they all were lying. So sorry that you were fooled by us lie-berals. We'll fool you again when we all say we're for Miers. How gullible you are jd.

Consdiering that we didn't have to go thousands of miles around the world,
and that the disatser area was samller than Iraq, and that the hurricane was
predicted to hit long in advance, I'd expected better. What this incident
shows is that the government is totally ineffective at helping those in
immediate need. So when the terrrorists blow up a damn or whatever, don't
expect to live because the government will not be there for you, despite all
the crap about being "prepared".

The 2010 was developed and refined in the 1970s, and there is probably
no "modern" Sony of comparable design. If you like the 2010, your best
bet is to look on eBay.

Try
http://electronics.listings.ebay.com/Radios-CB-Ham-Shortwave_Ham-Radio_W0QQfclZ3QQfcoZ1QQfromZR11QQsacatZ4670QQsocmdZListingItemList
and do a search.

(By the way, the Japan Radio Company NRD-525 is as good or better than
the Sony, but will most likely be on eBay cheaper. Had one since 1988,
and not a single burp.)

Grove & Universal. I've found Grove's service to be excellent. Back in the day, when I used to live about an hour away from 'em, I used to make the drive over there to buy stuff when there was somethin' I just had to have.

I have nothing against J&R and I recently ordered a couple of ICF-36's from 'em, but I tend not to buy SW stuff from 'em. Often when I'm orderin' SW stuff, there are other odds and ends that I'm also wantin' (connectors, antennas, and the like), and J&R isn't the place for that sorta stuff.

JRUing,

Good Radio Shack and Antenna Grounding
- Something To Think About !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5922

Well this is one of those YMMV things sometimes.

Every Shortwave Listener (SWL) Antenna that I have build and installed
using the Low Noise design concepts made popular
by John Doty has at least show an Improvement in the RF Signal Quality
: A 'few' had only a slight improvement; most had
a maked inprovement; some had a very great improvement.

ABOUT - The "Low Noise" Antenna design concepts
popularived by John Doty
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5178

Going from a simple Longwire Antenna to a Wire Antenna
Element connected to a remotely Grounded Matching Transformer
connected to a Coax Cable Feed-in-Line has consistantly
work for me and produced better Shortwave Listening (SWL)
Results - Always - But Hey That Me :o) ~ RHF

However, 'if' your radios are plugged into the House's AC
Electrical Power System : Then the RF signal is coming down
that Long Wire Antenna from the OutSide and into your House
(Home Sweet Home) and is connected to the External Antenna
Input of your Radio/Receiver. This External Antenna Input
of your Radio/Receiver has an internal circuit designed to
be an RF Circuit "PATH" for the External Antenna's RF Signal.
Through the Radio/Receiver the small RF Signal Current is
flowing around the Radio/Receiver's Circuitry and then
eventually to the AC Power Cord and down into the Ground
Potential of your House's Electrical Power System :
That is "IF" you have no other Ground Connections (Systems)
to your Radio/Receivers that present an easier current "Path'
for the RF Signal Potential to Flow-To !

TBL - Opposites Do Attract {+ to -} and Current Will Flow !

>From what you say - I would say that you have a very good
House Electrical Power System and a relatively low noise
electrical environment.

The only problem becomes when one day there is a nearby
Lightning Strike and the Voltage from (Current in) your

Antenna down to your Household Ground via your Radio /
Receivers is not 'small' but rather "LARGE".

GOOD RADIO SHACK AND ANTENNA GROUNDING MAY NOT ALWAYS
IMPROVE YOUR SIGNAL AND RADIO RECECPTION - - - - - -
BUT IT IS ALWAYS THE SAFE THING TO DO - JUST DO IT !

now... there is something to think about ~ RHF

= = = In Shortwave-SWL-Antenna@yahoogroups.com,
= = = Richards <jr-u-ing@a...> wrote:

RHF -- I do not mean to contradict you, but my personal
experience with several radios yield the conclusion that
grounding at any point has no effect on receiving.

I have studied and studied this, and have experimented
with all kinds of grounding systems, and the radio signals
never seem to get better for all my efforts, and my best
antenna is almost always a straight long wire in the backyard
with no ground of any kind on it, or the receiver, zilch.

I just don't get it.

Again, I am not contradicting you, but my experience is
that any form of grounding has had no improvement in on
either signal or noise.

Radios include: Kenwood R-5000, Kenwood R-2000, Sony 5900w,
Realistic DX-160, Hallicrafters S-120, Sangean 909 /
Realistic 398, Kaito 1102, and more.

It is the same on all of them. No problem, but no improvement.

What gives? Any ideas? //// Richards ///

I don't understand your comment.

I don't hear the hash when tuned to the analog frequency of an AM HD station even with a 9.5KHZ filter, which is as wide as I can go. However, if I tune to where the HD sidebands sit, other than nulling out the hash with a directional antenna, you won't be able to hear the alternate channel AM signal through the digital noise. Basically if HD takes off, you can forget BCB DXing. The only good news is at present HD is not allowed at night on the AM BCB.

Let me try to explain this one more time. AM stations are spaced 10Khz apart in the US. Say the AM station is at 1000 and is broadcasting in HD. This means the analog signal will be an AM signal centered at 1000. In addition, there will be two side bands a bit more than 10Khz from the center frequency, but for sake of argument, lets say the side bands sit at 990 and 1010. In theory, 990 and 1010 would not be used in your local market (FCC mandated)as AM broadcast stations to provide a guard band for the local AM broadcast stations 980 and 1020 from the local AM broadcast station at 1000. However, AM broadcast stations will exist at 990 and 1010 in some distant location. Thanks to HD, you will not be able to DX them.

Regarding Universal Radio...

I sent an email sometime a while back to see if they had a certain radio in stock. I didn't receive an answer after a couple of days so I resent the email. To this day, I still have not received an answer. I finally decided to call them up and got some guy on the phone who gave me the impression that I was interrupting him. This is my first experience with them and I am not impressed. I would try one of their competitors instead.

Not possible. Chip design and manufacturing has changed greatly since the
early '80s. You would have to redesign the chips with modern materials
and manufacuring methods. The cost of doing this would be too high for
chips made in small quantities.

For example, wires were soldered to the chips. It is now illegal to
sell chips in most places with lead, e.g. solder, in them. New technqiues
have been developed, but that changes the capacitance and conductivity of
them which changes it's RF characteristics.

If you don't think so, ask on sci.electronics.repair about the availabilty
of old chips and the possibility of getting new ones made.

For example, if it were a simple chip and it cost $500,000 to make a real
working chip, as opposed to a first run "test chip", how many would you
have to sell in order to make money?

It would be cheaper to re-do it in a DSP chip.

However you did it, you still would have to spend several hundred thousand
dollars designing and programing the radio. By the time you are done
and have a working design ready for the street, with documentation,
etc, you will have spent close to $1m.

Assuming the actual unit costs $250 to manufacture, add $100 for development,
another $50 for packaging, advertisment and tech support and you have a
cost of $400 which translates to a street price of $800.

This is assuming 10,000 units made in the first production run before the
costs would be made back. With the current state of shortwave listening,
I'm not sure you could sell 10,000 units.

Geoff.

you forget the laws of thermodynamics and at least the principal of "latent heat".

its a known fact that water that is worm tends to lose heat far more slowly than land. as a result, it may take weeks for water temp to match the air above it. thus, the gulf waters could still be exceptionally warm even given the cooler weather.

A lot naturally depends on what you want to listen to. I'd recommend the Icom if you're interested in listening to utilities or hams in SSB mode. If you're primarily interested in listening to the BBC and in occasional AM mode dxing, I'd look at the Palstar R30C or R30CC, even though it is more expensive:

The R-75 is a tough-signal receiver. The S-800 is a program listening
receiver.

I'm using my R-75 for MW bedside listening and it's MW performance in
the SSB mode is rock solid, but it sounds like a telephone.

If your a program listener who is interested mostly in

Strong signals and wants full FM in the Box, get the Sat 800..

IF you mostly enjoy Pirates, Utilities, Linconsihre Poacher, Volmets
off the Canary Islands,
of VERY faint faint SW stations, get the R-75..

Antenna counts for a lot.

1/4 wave verticals need a ground.

The only thing that protects against lightning is to disconnect and
ground all non-power line wires coming into the house from outside
during bad weather.

>QUESTION - Is Turning "Off" the AGC a valid Listening Technique
when Listening to Weak Radio Signals ? ? ? <

I use this method sometimes on weak signals on the tropical bands,
when the noise level is fairly low. Early local AM is the best time
for this method, I've found. Do this on SSB and you can get gobs of
weaker stuff, heard more easily. Doesn't sound pretty, though...turn
down the AF gain!

What I do on SSB DX is turn the AF way up, RF down to a mild sizzle
(AGC OFF). Makes SSB sound like FM.

I always use external speakers. That one has a 4'' full range in a
big plastic box, reminiscent of the ubiquitous 5 tuber from my youth.

If I put the radio on AM and tune 1260, the sound is quite exquisite.

At night I listen to KGO and KKOH and must deal with the occasional
fade.

Aren't the wires in chips wire bonded, which is akin to spot welding?

Have the "most places" who've banned the presumed chips with lead in them
also banned lead in the soldered connections on circuit boards?

I take it you mean banned outright, not just banned from landfills and
incenerators.

>
> If you don't think so, ask on sci.electronics.repair about the availabilty
> of old chips and the possibility of getting new ones made.

Yeah, but obselete parts will be made, if there's a demand. I can still get
new production 30's design 6L6s and 5U4s. Many 74xx logic gates are still
being made. New 555s are easy to find.

>
> For example, if it were a simple chip and it cost $500,000 to make a real

I really doubt Sony's decision to drop the 2010 came down to only one chip.
The whole radio is 80s manufacturing technology.

>
> It would be cheaper to re-do it in a DSP chip.

On the last point we agree. There's no reason for Sony to think they'd get
their investment back if they updated the 2010.

Do you, by chance have the Kiwa mods?

I find that on my Kiwa-modded R-75, if I switch on the SAM and back off the RF gain just a little bit, the fading becomes a nonissue. In fact, the RF gain reduction probably accounts for most of the improvement.

David,

Point # 1 - Yes for a 1/4 Wave Vertical the Ground itself or
1/4 WL Radials and some times the Feed-Line are the 'other'
Half of the the complete Antenna.

Point # 2 - "IF" Lightning Hits a nearby Power Pole then the
EMF Surge will come into your House via the Power Lines and
Damage or Destroy many of your Hosehold Appliances and very
'sensitive' Electronics.

A while back had a friend up the Hill in Twain Hate, CA lose :
* Stereo but not the TV in the Great Room
* CF Light on the Front Porch
* Kitchen Clock Radio in the Kitchen
* Electric Tooth Brush in the Kids Bathroom
* Garage Door Opener one of two
Why these and not some others who knows . . .

But then we also lost celphone service for two days afterward.

David - Check-Out Jack Painter's webpage :
"A Primer on Station Grounding and Surge Protection"
http://members.cox.net/pc-usa/station/grounding.htm
Avoiding the mistakes made by Amateurs - Straight Talk
about Protecting your "ASSets" without unplugging.

Why Turn the AGC "Off" ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5946

Howdy RHF,

The AGC is typically (though not always) driven by the signal level in the IF. Strong signals that are slightly off the listening frequency can leak into the AGC enough to cut the gain even though you don't hear them. Thus a nearby strong signal or even noise can reduce receiver sensitivity when you're listening to another, weaker signal.

The same effect can cause 'pumping' of the AGC, when a signal is either internmittant (like CW) or undergoing rapid fading - the receiver sensitivity bounces up and down with the interfering signal.

AGC time-constants can sometimes be exactly wrong for the fading cycle of a signal - it reduces gain just as the signal itself is fading.
This is why it's nice to have a choice of time-constants - slow and fast for example. When listening to sideband or CW, having a slow ACG helps smooth out the inrush of noise in between sylables, words, etc.

Try turning off your AGC more often, if only to get an appreciation of how much work it's generally doing. You'll be amazed at how much more variable signal levels are than you ever thought.

And then them loafheads will spread out all over the World.Just as bad as that phoney avian bird flu pandemic that some nitwits will say will kill off hundreads of millions of people all over the World.More people get killed every day by heavy phone books falling on top of their heads from tall buildings.

The table of contents (available online) seem to suggest that the E1 is
given some attention in the 2006 edition. (under the listing for
portable radio reviews, it states "premium model includes FM").

http://www.passband.com/pdf_files/TOC.pdf

Oh, and this is worthy of attention, too, even if off topic:

Right, well, I, too, have found that Universal can be rather slow in
replying to emails, from the few times that I emailed them. They have
a notice on their webpage, near the contact info, that states:

If you have an order or inquiry that requires immediate action please
call 1 800 431-3939.

So, I just call 'em if I'm requiring info or wanting to place an order.
Thankfully, in my dealings with Universal by phone, I've never gotten
the impression that they weren't keen on assisting a customer.

times.Look it up.
cuhulin <

I just did, from several sources. None of them, using any search
engine I have available, appear to contain the words "god" or "God".

Even if it did, I'm not sure what that would prove.

''Nature's God'' was a kind of New Age (of Reason) vague entity that
the Theists were fond of referring to.

Didn't one of the founders once say that if there really was a
vengeful God then we are all screwed?

>No Kiwa mods, Is there a kit or do I have to ship the radio somewhere? <

I think he has some do-it-yourself mods, but frankly, I wouldn't get inside the R-75 to tinker myself. I sent mine away to him, his work is guaranteed, and it's good. He had it back to me in about a week, IIRC.

Understand, the Kiwa mods are not a panacea for the R-75 shortcomings, but they *really* improve the AGC, and they make the S-AM work considerably better. It makes the dual PBT fully functional, a *real* boon. If you get the filter mods (I'm not sure if he still does these) it greatly helps the HF reception while somewhat compromising the FM mode (which I consider a nonissue). There is also a high-fidelity mod for AM reception (basically a slight audio filter widening designed to brighten the sound but avoid adjacent channel problems) that I have not yet gotten, but I may later.

In use by many government, military and commercial installations.

You'd better hope to God you don't need it serviced. You can buy an
RX-350 for what it costs go get it repaired. It's $25 to walk in front
of the building.

...
Iraqi intelligence documents seem to identify the Somalia ambush as the first incident of cooperation between Sudan, Iraq, and Osama Bin Laden. An Iraqi document signed by Saddam's secretary shows that the regime demanded that action was made to "hunt the Americans" in Somalia using "Arabian elements, or Asian (Muslims) or friends." The Iraqi documents list a range of groups available for participation in the operation. Muhammad Farrah Aidid, who led the ambush, even met with Iraqi intelligence in Khartoum.

From then on, there are periodic meetings between the Iraqis and Al-Qaeda officials. Training of Al-Qaeda operatives began in 1995 [during Impeached Clintoon's watch] as a result of meetings between the Iraqis and Abu Hajer al-Iraqi, known as Osama Bin Laden's "best friend." From then on, there would be a great number of meetings, participated in by many different leaders and officials of the Iraqi regime and Al-Qaeda. A stream of defectors would report cooperation between the two, as would many intelligence services.

Cooperation from the mid-1990s up until the war steadily increased, eventually culminating in Iraqi training of Al-Qaeda members in document forgery, bomb production, WMD development, and other activity. On more than one occasion, the Iraqis would go on alert and then an Al-Qaeda terrorist attack would be attempted. Iraq would also actively work with Al-Qaeda (and Syrian intelligence) to prepare the guerrilla war we're facing today.

I'm aware of new evidence that Iran played a direct role in 9/11 and sponsoring Al-Qaeda and this is not contradictory. In fact, documents brought to light by Ken Timmerman show that Imad Mughniyah of Hezbollah, high-level Iranian officials, high-level Iraqi intelligence officials and high-level Al-Qaeda operatives met in Iran in October 2001. So Bin Laden relied on several avenues of support, which made sense, as this meant he couldn't be held down by one state's interests.
...
Saddam passed his WMDs into other countries long before Operation Iraqi Freedom began. Iraq's WMDs have long been, all the way back to the 1990s, connected to other state's WMD programs. By the late 1990s, a great part of Iraq's nuclear program was based in Libya as a joint project. Iraqi WMD would be routinely moved in and out of Syria to avoid inspections.

So the fact that Syrian defectors, Iraqi scientists and foreign intelligence sources indicate the WMD was moved to Syria, Lebanon, Libya and Iran is not surprising at all. American satellites saw traffic moving from Iraq into Syria between January 2003 and the war's beginning, and at this time the Iraqi border guards were replaced with Iraqi intelligence. Iran has even taken in some Iraqi chemical and biological weapons equipment, just like

they took in Iraqi aircraft in 1991.
...
UN inspectors even CONFIRMED in the 1990s [during Impeached Clintoon's watch] this was going on. Iraqi WMD expertise has been confirmed to be in other countries as well (and Duelfer confirmed that Qusay Hussein prepared for such expertise to go to Syria) . This is not at odds with Duelfer or Kay, who both confirmed there were reports of WMD going to Syria and that trucks full of "Iraqi equipment" went to Syria but we don't know the contents. Duelfer even said there was evidence Syria offered to harbor Iraqi WMD, but he couldn't confirm that they did in fact do that because the insurgency stopped his team from completing the investigation.
...
Don't fool yourself, they [RUSSIA] are the ones arming Syria, Iran, and China. In my book, I chronicle how deeply involved Russia was in helping Saddam Hussein on many levels. The Russians, as part of their geopolitical strategy and because of the oil they got from Iraq, helped him at every end.
...
Former Prime Minister Yevgeny Primakov, a long personal friend of Saddam Hussein, went to Iraq before the war with two former Soviet generals that some suspect advised Iraq on how to fight the coming war. The highest ranking intelligence officer ever to defect from the Soviet Bloc, Ion Mihai Pacepa, has come out and said that the Soviets long had a plan entitled "Sarindar" or "Emergency Exit" for its third-world allies, originally Libya but later Iraq, to abandon evidence of their WMD activity if an invasion by Western forces was expected. Pacepa says he was personally consulted on the plan by Yuri Andropov, Yevgeny Primakov, Leonid Brezhnev, and other leaders. The aim was to rid the targeted country of Russian involvement in their WMD programs, as well as to "frustrate the West by not giving them anything they could make propaganda with." They [and Neo-Komms] aimed to discredit the West.

Of course it sounds like a telephone you nitwit.
Your using a 3KHz filter to listen to a 10KHz signal.

The key here is selectivity between a R75 and 800 in AM mode not what filter your using - d'oh!

Does the R75 have an optional narrow AM filter available? If it does and your interested in DXing MW get the R75. If you only want to listen to medium to strong AM programs with very good audio fidelity then save your money and get a Boston Acoustics Recepter radio.

For about 30 years I've been using Amateur Electronic Supply. They are
ham-oriented, but they sell all the SW listening rigs, too, with
antennas, wire, coax, tuners or anything else you'll need.

Good prices, too.

See their web site at www.aesham.com

They have a service department, if needed.

Ask them to send you their free paper catalog -- nicest dream book
you'll find.

Dear Mr. Morrow,

Mrs. Kehoe is very fortunate to have such a good friend as you.

As the current Mrs. Atlanta International 2005 Reigning Queen, Mrs. Kehoe will indeed have a strong influence not just on little girls, but on her country as a whole.

Mrs. Kehoe's platform during her Reigning Year is to relax U.S. immigration laws to make it easy for foreigners who get married to Americans to immigrate to the U.S. She is working hard to get those visa requirements relaxed.

My partner Suzanne Sugarbaker and I have coached Mrs. Kehoe extensively to many of her pageant victories, and we plan to make her the winningest Pageant Queen in history. Once she gets her bariatric surgery done and loses 200 pounds, she will be well on her way to achieving just that.

Your support of Mrs. Kehoe is greatly appreciated. Should you wish to contribute financially to ensure her continued future success, please get in touch with our offices.

Yours in Beauty and Pageantry,

Mrs. Helen Van Patterson-Patton

Life Coach, Beauty Coach, Pageant Coach
President, Suzanne Sugarbaker Pageant Fund
President, Consuelo Maid Service for the Rich and Famous

Leroy! Dig. I have an HF-150; an R8B; an SW2; and the R-75. I used
to have 2 R-390As. I know what ''bandpass'' means.

I like it to sound like a telephone. Besides, narrower bandwidth,
better reception.

I bought a nice Elgin (made in Japan) model R-2700 AM/FM clock radio for one dollar and fifty cents at the Goodwill thrift store this afternoon.It has a plastic wood grained looking cabinet and the front of the radio is chrome looking and the radio looks almost like brand new.The radio has twin round dials next to the rectangular shaped clock dial,one dial for FM and the other dial for AM,both dials turn at the same time when tuning stations.The radio plays ok and the clock works,the clock light bulb is burnt out.Otherwise it is a nice little desk top/table top radio for one dollar and fifty cents.A real good Wallace Beery (he was one of the best movie actors ever) movie,Big Jack,is starting on tv now.

Then follow me now. I'm off to dinner. As far as the media situation is concerned, I rely mostly on print media for well researched, well reported, in-depth news, and on broadcast news for the headlines. As I said before, I think the media got it right most of the time in a very difficult situation. The bad news is, we get to see it all played over again soon with Wilma - hopefully not as bad tho.

Happy DX

Greg

- Maybe...

Then again, Maybe Not ..

"
Patrick Fitzgerald has before him the most important criminal case in American history. Watergate, by comparison, was a random burglary in an age of innocence. The investigator's prosecutorial authority in this present case is not constrained by any regulation. If he finds a thread connecting the leak to something greater, Fitzgerald has the legal power to follow it to the web in search of the spider. It seems unlikely, then, that he would simply go after the leakers and the people who sought to cover up the leak when it was merely a secondary consequence of the much greater crime of forging evidence to foment war.

Fitzgerald did not earn his reputation as an Irish alligator by going after the little guy.
Presumably, he is trying to find evidence that Karl Rove launched a covert operation to create the forged documents and then conspired to out Valerie Plame when he learned the fraud was being uncovered by Plame's husband, Ambassador Joseph Wilson.

As much as this sounds like the plot of a John le Carre novel, it also comports with the profile of the Karl Rove I have known, watched, traveled with and written about for the past 25 years.

"

I hate to think of all the Brave men and Women in The United States Military
Dying senslessly in Iraq to elevate the career of a Criminal

"A nation can survive its fools, and even the ambitious. But it cannot
survive treason from within.

An enemy at the gates is less formidable, for he is known and he
carries his banners openly. But the traitor moves among those within
the gate freely, his sly whispers rustling through all the galleys,
heard in the very hall of government itself. For the traitor appears
not a traitorï¿½he speaks in the accents familiar to his victims, and
wears their face and their garment, and he appeals to the baseness
that lies deep in the hearts of all men. He rots the soul of a
nationï¿½he works secretly and unknown in the night to undermine the
pillars of a cityï¿½he infects the body politic so that it can no longer
resist. A murderer is less to be feared." --Cicero, 42 B.C.E.

Good post. The Icom R-75 has selectable no AGC/slow AGC/fast AGC,
and each is very useful at different times for different conditions.

Tony

I want to listen to it all. Sometimes I like the stronger broadcast
CBC / BBC / Havana Cuba type stuff and sometimes I want the fainter,
off beat type of stuff, sometimes I like SSB.

I want it all..ALL.......ALL I SAY.

Seriously.

Sounding like a telephone is ok with me. I can always use headphones
or an external speaker. I'm more interested in a really good, all
around reciever. If I want FM quality I'll use my stereo.

3152. HERE COMES MARS! IT'S ALL ABOUT MIND MANIPULATION

Newsgroup: rec.radio.shortwave
Date: 2005-10-21 01:17:28 UTC
From: George Orwell <nobody@mixmaster.it>
Message-ID: <703dbee7db18cb1ec2e089c0069fce05@mixmaster.it>
Source record: 45264
Cross-posted to: rec.radio.shortwave,sci.astro

Doesn't it seem strange that a planet one in our own solar system
isn't being touted as a probable cataclysm?
Doesn't it seem strange that the earthquakes, volcanoes and hurricanes
are possibly products of the incoming Mars?
Doesn't it seem strange Mars is getting closer with each year?
perhaps with the Mayan date of 2012 being significant?

Have we been all brainwashed or as Velikovsky calls "mankind in amnesia?"
knowing our fate.

Perhaps Nostradamus's quatrain sheds a little light.
Read it twice and thrice.
Do notice the last line "terrified by fear (by the media)
none will be seen to move (mankind's amnesia and complacency)"

Century VIII Quatrain 80

LXXX.
Des innocens le sang de vefue & vierge.
Tant de maulx faitz par moyen se grand Roge
Saintz simulacres tremper en ardent cierge
De frayeur crainte ne verra nul que boge.

The blood of innocents, widow and virgin,
so many evils committed by means of the Great Red One,
holy images placed over burning candles,
terrified by fear, none will be seen to move.

You would be wise to not misunderestimate the President of the United
States.

Judging by the volume and types of posts tonight the airwaves must be
dead.

3154. Better Signal-to-Noise Ratio from a Combination of Improvements including . . . a Ground

Newsgroup: rec.radio.shortwave
Date: 2005-10-21 01:21:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1129857667.350522.96840@g14g2000cwa.googlegroups.com>
Source record: 45265

For One and All,

Better Signal-to-Noise Ratio from a Combination of Improvements
including . . . a Ground.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5961

What I generally 'see' as far as an "Improvement" of the
quality of the RF Signal getting to the Receiver is from a combination
of things.

1. The Wire Antenna Element is placed farther from the House.

2. A 'remote' Ground Rod is used : Again this Ground Rod
is planted in the ground farther away from the House.

3. Use of a Matching Transformer between the Wire Antenna
Element and the Coax Cable : Mounted the Matching Transformer
on the Ground Rod - if possible.

4. Use of a Coax Cable Feed-in-Line : Laying-On -or-
Buried-Under the Ground - if possible.

5. The Extra Mile - Use a well grounded Lightning Arrestor
and/or an In-Line 1:1 Isolation Transformer where the Coax
Cable leaves the Ground and enters the House.

NOTE - All the above is no good if you do not have a very well
Grounded Household Electrical System. Do This First !

RESULTS - Actually in most instances what I 'see' is a reduction
in the S-Meter reading : But I also "Hear" a Greater Reduction
of the Noise Level. Thus the Signal-to-Noise Radio 'improves'
and the Listenability of the RF Signal (Audio) is much Better.

BUT REMEMBER - YOUR PRIMARY USE OF A GROUND IS FOR IMPROVED ELECTRICAL
SAFETY AND LIGHTNING PROTECTION - USE IT [.]

i hope we are communicating - iane ~ RHF

experience with several radios yield the conclusion that

grounding at any point has no effect on receiving.......
....I just don't get it."

- -

DAVE Wrote:
Neither do I. My experience is the same.
I have never witnessed a signal improvement from the use
of a variety of different RF grounds. It think it's
possible that once or twice I think I heard a small
reduction in noise.

I suspect that my house electrical system provides
sufficient ground to yield the maximum differential
between what's on my antenna and ground.

Oorahh,I forgot to mention on the back of my Elgin AM/FM/Clock collectible (I also own two other collectible Elgin radios and a collectible Longines radio and a collectible Bulova radio (they will never see ebay!) radio is an earphone jack and a wire that comes out of the rear panel is connected to a screw on the back panel of the radio (probally for attaching an antenna for FM,if needed) and a label which says,Kirkpatrick,Pettis,Smith,Polian Inc.Investment Bankers.Robert E. Brady Vice President 1623 Farnam Street,Suite 700 Omaha,Nebraska 68102 (402) 449-1400

So,I reckon the radio spent some time in Omaha or somewhere in Nebraska before it showed up at that Goodwill store six tenths of a mile south of my doggys couch.

DX Ace,

I tried the trick with backing-off on the RF Gain and with
the Icom IC-R75 Receiver; when you do the S-Meter slowly
starts to creep-up the scale.

Hey, but it does work and you can "Hear" a difference in
the RF Signal.

once again thanks for the tip ~ RHF

Hello,

I just picked one of these up.

Anything to look out for?

Anyone know where I can find a service manual?

Most of the online places don't show one for this model and I've had no luck contacting A.G. Tannenbaum's.

Thanks,

Jeff

The Icom's built-in speaker is, shall we say, "dissapointing". A
$20 Radio Shack add-on speaker makes it sound great. And it sounds as
good through headphones as any receiver. Easy for me to say, though, I
do 95% of my SW listening through headphones.

Actually, that's perfectly true. And the previous poster quoted
Emmanuel Veliskovsky. Veliskovsky was the Bozo the Clown of
astrophysics writers. His hilarious book "Worlds in Collision" is his
(cough) "masterpiece". Veliskovsky wasn't even an astronomer or
astrophysicist - he was a pshychiatrist.

There's more....

The AGC control voltage is usually derived by rectifying the IF signal
followed by a low pass filter - in effect an Amplitude Modulation envelope
detector. The AGC time constants determine the audio frequency pass band of
the AGC circuit. AGC will actually respond to bass frequency modulation of
the carrier and, the shorter the time constants, the more it responds to any
one frequency and to higher ones. This causes distortion of the amplitude of

the IF signal reaching the AM detector that drives the audio output and can be grossly distorted if there is heavy bass modulation and fast AGC. Experiments I conducted on my DX-394 with accelerated attack/release times on the order of 5/25 milliseconds bore that out, especially with MW broadcast stations. Switching to slow AGC dramatically improves audio fidelity, turning AGC off is best for fiedlity, if signal strength is steady, a la local ground wave reception.

We DRM experimenters find that we achieve higher DRM calculated SNR by turning AGC off. This does not translate into higher audio SNR but rather to lower bit error rates which can cause weird distortion or muting if the BER is high enough. I'm not sure what all the mechanisms that cause this effect are but one I do know for sure is that some receivers shift frequency as the IF gain changes, whether by AGC or manual control. In the case of the original and A-model DX-394, this is due to changes in loading of the 2nd local oscillator by the 2nd mixer as its gain varies. This was virtually eliminated in the B-model by the insertion of a buffer amplifier between the oscillator and mixer. Such oscillator pulling by the AGC as signal strength varies is liable to cause distortion to suppressed carrier AM, to slow-scan TV and FSK teletype, to PSK and most every mode other than AM with carrier (using envelope detection only). Synchronous detectors of AM with carrier will lose lock more frequently in fading. Even lowly carrier on-off keyed Morse code will chirp or warble if signals move the S-meter a lot - meaning they are strong and the AGC acts fast.

You can readily check whether your radio is susceptible to oscillator pulling by tuning to a strong carrier with the receiver in SSB/CW mode so that you get a low frequency beat note and then listen to the pitch as you turn down the RF/IF gain and turn up the volume control. Ideally, the pitch should not change at any combination of gain settings with AGC on or off.

S-meters will not have a meaningful scale when AGC is turned off or RF/IF gain set below maximum. I have no idea how many other radios behave but find that, with my modified DX-394 with the AGC Defeat mod, the meter is extremely sensitive when AGC is turned off. Turning the RF Gain control well above the max reading will cause some stage to overload (distortion again!) while turning it well below minimum results in loss of detection. Any on-scale reading results in good detected audio.

One correction in procedure which all will have realized the first time they turn off the AGC is that you should turn the RF gain down first - otherwise, you might be blasted out of your headphones.

Those who have no AGC on/off control can minimise AGC action and its good and bad effects by reducing the RF/IF gains and raising the Audio gain or volume control to max.

Regards,
Tom

Many times when I can not find anything to listen to on the shortwave radio, I'll just listen to the different sounds.

Sometimes I'll hear something that sounds like a fast train, other times I'll hear something that sounds like bubbles and other times like a rain storm.

I would like someone to record the Strange Sounds on the Airwaves, put them on a CD, explain what the sound is and maybe sell them.

I think it would be fun to be able to understand the different types of noises a radio can pick up!

Someone mentioned the Ten Tec 320D in another thread so I decided to start a 320D thread rather than hijack someone elses thread. I purchased a 320D a while back with the DXTRA software www.dxtra.com and although I like Ten Tec products, I ended up sending the radio back. I tried the Dxtra software, the Ten Tec software and and Clifton Turner's software. While it has some interesting features, I just could not get thrilled about it. The radio receives really good marks in the various reviews but I ended up giving it the boot. Has anybody else had any experience/comments about this radio? I am thinking about buying a Grundig Satellit 800 for a desktop radio before they disappear but have also been thinking about giving the 320D another try.

Here's a few 320D related links I had saved on my computer for anybody that's interested.

I have the 'regular' 320. It was worth every penny. The data base
afforded by most (all?) software lets you save the settings for each
received station.

Perhaps your antenna was providing poor performance?

Yes the antenna I had was not the best but that was not really what I was dissatisfied with. I dunno... there's just something about spinning dial/knobs on a real radio. Spinning knobs via mouse just seemed a little odd. Of course there are a lot more functions and versatility with a computer aided radio. Oh yeah... talk about a nice, big, easy to read display... There are none better.

What type of antenna are you using on your 320? Correct me if I'm wrong but I thing the only difference between the 320 and the 320D is that the D is DRM capable. Not a big deal in my book. Maybe I could find a deal on a used 320 on Ebay...

Is the 320 your primary/only SW radio?

:)

They have banned lead, but largely because of the fumes from the
production of the products, Pure tin solders have some very
interesting problems of their own, and it has been a very unpleasant
experience for the Military. Under conditions not well understood, the
tin will grow crystals sometimes, and the crystals can and do create
new connections that were never intended, usually with less than
desireable consequences...

For One and All,

For all and one...

>Better Signal-to-Noise Ratio from a Combination of Improvements
including . . . a Ground.
>http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5961

What I generally 'see' as far as an "Improvement" of the
quality of the RF Signal getting to the Receiver is from a combination
of things.

>1. The Wire Antenna Element is placed farther from the House.

This can help if needed. Most of my antennas are over the house.

>2. A 'remote' Ground Rod is used : Again this Ground Rod
is planted in the ground farther away from the House.

But again, this is only due to the incomplete antenna that
you are running in that case. "I assume the usual random wire of
whatever config"

>3. Use of a Matching Transformer between the Wire Antenna
Element and the Coax Cable : Mounted the Matching Transformer
on the Ground Rod - if possible.

Again, this will almost always have zero effect on s/n ratio.
There is usually no lack of signal without the transformer.

>4. Use of a Coax Cable Feed-in-Line : Laying-On -or-
Buried-Under the Ground - if possible.

You do not have to use coax to have low noise reception.
Ladder line can work just as well, if properly balanced.
Coax is just often more convenient, and easier to work with.
But ladder line can be just as quiet. If the coax is poorly
decoupled, it will be as noisy as any unbalanced ladder line.

>5. The Extra Mile - Use a well grounded Lightning Arrestor
and/or an In-Line 1:1 Isolation Transformer where the Coax
Cable leaves the Ground and enters the House.

But what does this have to do with improving the s/n ratio?

>NOTE - All the above is no good if you do not have a very well
Grounded Household Electrical System. Do This First !

I'm sorry, but this is pure hogwash. You *do not* need *any*
kind of a ground to have a good low noise receiving system.

>RESULTS - Actually in most instances what I 'see' is a reduction
in the S-Meter reading : But I also "Hear" a Greater Reduction
of the Noise Level. Thus the Signal-to-Noise Radio 'improves'
and the Listenability of the RF Signal (Audio) is much Better.

Well, sure, you are decoupling the feedline in a better manner.
Ground wouldn't have anything to do with it, except you are using
ground as a method to decouple the feedline. You can decouple
the feedline just as well using other "non grounded" methods.
You are confusing a technique with the actual cure. The actual
cure is the decoupling of the line, not the ground. The ground is
just a method you are using to decouple the line.

>BUT REMEMBER - YOUR PRIMARY USE OF A GROUND IS FOR IMPROVED ELECTRICAL
SAFETY AND LIGHTNING PROTECTION - USE IT [.]

I have no argument with this if those concerns are actual.
IE: My battery run IC-706 needs no safety ground. In that
case, it can be ignored.
But my older tube rigs do need to be safety grounded.
In that case, ignoring can be painful... :(
Most of my antennas are elevated, and my mast does take
strikes from time to time. I *do* have a well grounded mast
for a lightning return, and I have a ground bulkhead outside
my window to ground lines to in bad wx...
But still....Has nothing to do with improving s/n ratio.. :/

>i hope we are communicating - iane ~ RHF

Your lips move, but I can't hear what you're sayin....
"optional Pink Floyd content" added as a bonus...
.
.

I do mean to contradict him. He's full of BS, and many newbies
here will believe what he says is true. This is not good.
RHF seems like an enthusiastic sort, but I play no favorites,
or cut any slack, when I read blatant BS. I would expect the
same if I spewed BS, and anyone is welcome to debate my
theories on this subject. You will note that few challenge me on
this though. Why? Cuz I'm correct in this case concerning s/n
ratios, grounds, other related ad nausium.

In *most* cases it doesn't. It rarely improves a "complete"
antenna. I have seen grounding improve MW reception in some
cases, but rarely HF unless the antenna is lame... All my antennas
are complete, and adding a ground does nada...

>....I just don't get it."

Cuz, there's really nothing to get... :/

- -

>DAVE Wrote:
Neither do I. My experience is the same.
I have never witnessed a signal improvement from the use
of a variety of different RF grounds. It think it's
possible that once or twice I think I heard a small
>reduction in
noise.....

Will usually be due to an improved decoupling of a line..
But ground is not required to complete this task.

>I suspect that my house electrical system provides
sufficient ground to yield the maximum differential
>between what's on my antenna and ground.

Best to use complete antennas. That way it won't matter..
Ground is actually a noise *source*. It's not the majic cure all...
Using ground as RHF describes is a bandaid decoupling
technique often used for an incomplete, fairly poorly designed,
antenna system. IE: the random wire....

www.passband.com

$22.95 with free priority shipping. Available now.

www.Amazon.com

$15.95 plus free shipping if you order something with it that brings the
total over $25. It says not available yet though.

I went ahead and ordered it from Passband.

Metinks I like that lawyer Patrick Fitzgerald guy.SIC em!,Patrick Fitzgerald,SIC em! Hey,Patrick,there is more than enough Dirt to brought Smoke on bush's and cheney's arse too.SIC em!

I was next door about an hour ago,talking to those two women,they were grilling some big franks on a BBQ grill in their driveway.The 30 year old woman whom works at a Kroger food store said when food items get near the end of their code,they mark them down to about half price to move them on out of the store. The 37 year old Bell South woman from Natchez said she is going to Ripley,Mississippi in the morning for a primitive weaponry thingy.She said she used to make and sell primitive weapons before she went to work for Bell South in Jackson.
www.devilfinder.com Native Way Primitive Weaponry Mississippi
(I think she said Washington,Mississippi) She used to be a tech when she was in the Air Force and she worked on Air Force Aircraft.

No. I sometimes get attacks of the 'spinning dial/knobs on a real radio'
syndrome. My latest new (to me) radio is a well maintained Kenwood
R1000. Some of the other sets include a Zenith Trans Oceanic R7000,
Sangean 909 and RS 398, Yaesu FRG 9600, FRG 7 and a Kenwood R2000.
They're all fun and get rotated into usage when the urge moves me.

I have a straight 100 foot (30 meter, approx) antenna about seventeen
feet off the ground and oriented in a north/south direction. Coaxial
lead in.

mike

I have or have had some of the same radios that you mentioned, all of them good radios in their own right. It sounds like you have a pretty good antenna setup. You know the one thing I need right now is a "radio only" desk. I saw a picture of DX Ace's desk setup sometime back and he has a really nice setup. It wasn't fancy just clean looking and well thought out.

By the way... I'm glad to see that I'm not the only one with too many radios and still wanting more.

;)

I sorta hope K1MAN goes back to broadcasting on 14.313
again, like he did during the heydays of the old 14.313 BARF vs
Piece Coalition Wars! Remember that Hans? I still recall with
glee the day old Mike MU-Juice was on there talkin to fat Judy and
Baxter fired up his stupid broadcast right on top of them! Ole dumbshit

Mike didn't know what was going on and threw one of his famous
on the air "shitfits" when he realized what happened. Yes, ole Glen
sure
knew how to inflame the situation and interject himself into the
fracas.

The World Can't Wait!
Drive Out the Bush Regime!
Mobilize for November 2, 2005!
sign and circulate
Your government, on the basis of outrageous lies, is waging a murderous and utterly illegitimate war in Iraq, with other countries in their sights.

Your government is openly torturing people, and justifying it.

Your government puts people in jail on the merest suspicion, refusing them lawyers, and either holding them indefinitely or deporting them in the dead of night.

Your government is moving each day closer to a theocracy, where a narrow and hateful brand of Christian fundamentalism will rule.

Your government suppresses the science that doesnï¿½t fit its religious, political and economic agenda, forcing present and future generations to pay a terrible price.

Your government is moving to deny women here, and all over the world, the right to birth control and abortion.

Your government enforces a culture of greed, bigotry, intolerance and ignorance.

People look at all this and think of Hitlerï¿½and they are right to do so. The Bush regime is setting out to radically remake society very quickly, in a fascist way, and for generations to come. We must act now; the future is in the balance. Click to read more...

Have you seen what Deutsche Welle is planning for the next broadcast period (October 30, 2005 - March 25, 2006)? They're cutting back on their broadcasts. For example, currently they broadcast to North America eight hours in German (2000-0400 UTC) and one hour in English (2100-2200 UTC) and their new schedule is four hours in German (0200-0400 and 1400-1600 UTC) and one half hour in English (2300-2330 UTC). They say that they will do this worldwide - two hours in the morning and two hours in the evening (local time). Also, currently their use 12 different frequencies from four transmitter sites and they're changing to 11 frequencies from six sites to North America.

Nice photos, wonderfully imaginative conspiracy theories, but really
bad science and weird methodologies. If there were any truth to any of
it the world would be generally aware of it by this time. It's too far
fetched..!

But what about the secret rays from satellites that read your mind and re-transmit the data into your computer printer's secret hidden receivers.

Another good reason to stock up on old army rifles, MRIs, aluminum foil, bicycle helmets, plastic sheathing, and duct tape.

Live update from Casa Christi...Power gone at 2:30

---

still have phone at 4:00am...hence dial-up connection and laptop
battery

Don't mean to be a downer, but this is terrifyng...no other way to
describe it.
What we are hearing already is worse than Emily was at it's worst and
we have 10 more hours of this before the eye... Then several hours of
the eye... then 10 to 12 more hours of hurricane as relayed in a
statement issued by our Mayor last night.

Eyewall is approx 55 miles SE of us, headed NW at 6mph with 150mph
winds

This may be our last update, although sleep at this point is near
impossible.

We are calm but bundles of nerves.

So there should be a "knob controller" that connects to the computer
and gives the needed knob function for tuning.

>Is has 3 AM bandwidths. The Narrow is useless unless you off tune. Talk Radio works real well in SSB tuning on the R-75.. Restricted audio dynamic range. Clarity. Punch.<

The narrow is actually quite useful if you use it on a tight SW frequency and off-tune the IF with the PBT knobs. It can also clean up a signal from a stronger station with minor adjacent QRM. The levels that Icom provides (15, 6, 2.8) aren't especially well-chosen for AM reception, but a compromise was made to accommodate FM. A better choice would have been to include a fourth filter and make them ALL available on any mode. This was probably Icom's biggest mistake with this receiver, bigger (IMO) than the S-AM problems, and comparable to the weird factory-set AGC.

Having the reconfigured set of Kiwa filters makes it more in line with typical bandwidths provided by other manufacturers (6-wide, 3.8-medium, 2-range-narrow). These are pretty much all you need. With the AGC also fixed courtesy of Kiwa and the resultant ability to use all of the filters *and* PBT on AM and S-AM, the radio's performance shines much more brightly.

Since I am a veteran since the Vietnam war, and now work in the Middle East, and have intimate acumen about the problems of our intelligence before Gulf War II, this proclamation of "...the most important criminal case since Watergate..." is a lot of liberal and politically, legally and professional poetic license.

I know that the majority of Americans over here do not find Mr. Bush criminal, or desire impeachment...in fact we'd like to see the former Clinton administration brought up on incompetance to pure negligence charges in the execution of their duties.

And thank God that the Democrats were trashed in the last election as their chosen mouth piece, Kerry wanted to further cut the CIA by a whopping 85% - and that is Congressional Record my friends.

We have to face facts and the true nature of the problem then and now....our education system is a total failure, our society is lacking in worldly knowledge beyond the slanted CNN rhetoric, we still do not see the brutal nature of the world unless a natural disaster or genocide is covered on TV, and we are undermanned and ill equipped to fight any war.....the fact is that the American people have taked a free-ride since World War II.

Couple these situation with the corrupt business culture that is undermining America's future, and we have a real mess on our hands that demands the likes of Senator John McCain and his democratic allies.

There is a tremendous movement, well funded and trained to spread radical Islam throughout the Third World. In the USA, several Muslim organizations are achieving legitimacy despite a similar agenda. On the world stage, there is continued murder, corruption, and suppression of basic human rights under the present Islamic governments. Those that can adapt their cultures and religion to the world community, they are enjoying prosperity in the Middle to lower classes. The others control the politics, wealth, and agenda through the despot dictators, kings, and self-proclaimed religious leaders in the name of Islam.

We are considered poly-theists ... therefore must be cleansed...adding the ridiculous religious right groups in America waving the flag in their churches (a no-no in Europe, esp. Italy) and even disputing evolution (now any educated man or woman knows that the preponderance of scientific evidence for evolution outweighs the bible), and the logic that God has only time for us...so where did God go...abandon us and for what reason if he is eternal and all present.....it is man who is failing God and himself.

The intelligence is and was lacking due to an education system that no longer trains the students 3 R's...no longer fails students not deserving to fail....no longer makes demands for science or second language training (only if it is stupid Spanish, no longer a player on the world scene or in science but dispalyed everywhere in the USA...what ever happened to learning English to become an American as my grandfather had to...)....still using an archaic, wasteful English vice Metric system...electing leaders with BS degrees rather than hard science or business educational backgrounds and experience.....a low birth rate (no gun fodder means any civilization will fade into world history).....most importantly, we have tried to become good citizens of the world rather than good American citizens...we set the standards in science, business, human rights,...and now American-English speaking Third World denizens are doing so while we and our leaders flounder in the face of a definite threat to our western culture and way-of-life...like Rome, when we are gone (and we will as things stand now), the world will enjoy another round of the Dark Ages.....

We need a leader who sets simple, long term goals...sets and enforces simple human rights policies....communicates a foreign policy that has no exemptions for family friends, as well as, minority nations and leaders in the UN, supports a return to basic educational values, allows family's to discipline their children without fear of child abuse advocates (dress, drugs, work ethics, respect...all need a return to the family plate, and not to the "village" as Hillary Clinton expounded in her American-communist manifesto "It Takes A Village"...we do not need more laws or police and especially lawyers...we need fewer laws subject to judicial review every 10 years....we need reform in prisons to rehabilitate the criminals as Europe does with great success....we no longer need to have both parents working (there simply are not enugh good paying jobs), and we should reward families having children but not those past 1st generation welfare status (those on welfare shoudl work for the monies and benefits if they are not disabled)...we need drastic political reforms too...

No senator or representative should be allowed to serve beyond 2 consecutive terms in the same office...none should receive retirement benefits unless it is under the same guidelines as the military service...none should be able to receive "gifts" - another case of them being placed under the same laws as the military officers must serve under.....Americans should be drafted for a minimum of 2 years of civil or military service (little Johnny or Sally could use some discipline, and a lesson on the price of citizenship)...and if one does not serve despite being physically able, then they should not have the right to vote or receive federal benefits......the National Guard and Reservists should be removed from Iraq (Clinton used them as a supplement to the active duty military, and this was never the intent of either group...when Reagan ended the Cold War, where did the peace dividends go...not to the military or the average citizen...Congress should be made to account for these monies ill-spent after the Cold War.....

Put the Guard into the US cities, and eliminate the gangs...outlaw them as national terrorists groups, and jail or kill them....they are punks or criminals, and America can do without them and their nonsense......the Reservists can supplement the military when they go overseas to fight, but to have active duty military on the 4th tour of combat duty smacks of stupidity and the same problem we suffered during the Vietnam War....our citizens want the milk, but not the cow....two tours is enough, and after a tour back home for 3 years, then a return to duty would be acceptable.....if we are so understrengthed, then bring on the draft...those who chose not to serve, give them a one-wat ticket out of America, or strip them of their rights....try living abroad, and you'll see that a few carry the burden for the many...the many are just vampires on our liberties and constitution....you have the right to be an American, so you should earn and protect that right, and the rights of other Americans.......if you can find a country who will accept your lazy, uneducated, unproductive butts have at it......

It is true the Moore makes political movies, but the young men and women overseas are making history...for the first time in my 33 years of fighting and working on the world stgae, I hear the word "freedom" on the world citizens' lips.....true some are lazt to fight, or ill equipped or fed, or religiously oppresses...but the majority crave what we have...the leadersihp in the Islamic world uses religion as the means to distract their charges, and devert the frustration to the USA and Europe...make no mistake that we are at war with a culture that embraced Islam centures ago, and used and still using it to suppress people to exploit the wealth over here.....we have no allies among the Arab nations.....as always they switch sides depending on the payoffs our US businessmen (what a disgraceful lot they are in Arabia) or politicans (taking monies for elections from foreign citizens or groups or governments should be outlawed in the USA) who are incompetant, self-serving, and ill-equipped mentally or professionally to deal with today's or tomorrows world or local problems.

In short, do not tell me about criminal when I have seen, or been the victim of policies from the left for over 36 years......get off your ass and vote for the man and not the two crony parties...we need a third party, or pray that McCain runs with a Democrat in the next election...I am sick of both the Democrats and Republican committees and their patronage control of governmental jobs....our very best and brightest are kept out of the key jobs that make our services and society work.....

Read the Constitution and realize what it means... we are losing our American ideals and way-of-life.....outlaw religious political organizations (they are not constitutional; they are a negative on the world's future; and most importantly, smack of the same idealogical radicalism as the Islamic militant groups), impose term limitations on elected officials, and get leaders into our government without political science, international affairs, law, or humanity degrees...we need clear and creative thinkers for the future....we are becoming what we despised in Europe back in 1776.....

Quit wasting time and money with these investigations and hearings (damn lawyers create nothing, but document anything to get elected).....and get out there and run for office or support a local working class individual for senator or representative.....we the people does not means that we need an oligarchy to tell us what or how to sustain our freedoms.....it is time for the Democratic Party to go away, the Republican Party to look at the working stiff as the real American, and we need to form another Bull Moose Party with another Teddy Roosevelt strong on and for America...if one does not like this, then find another country to work and live in.....the rest of the world's problems are becoming ours.....be strong, be determined, stay focused, and be attentive.....what the world thinks or does should never be our leaders' agendas.....taking care of back home should be...and if we are threatened, then strike with full force not just on the terrorists or some nations leaders...bear the force and our power on the terrorists' families or the nations' peoples....people allow terrorism to flourish (be and my brother against the stranger-the Iraqi's are hypocrits, as all Muslims are) and governments to kill their own citiznes...waiting for the UN esp. in Darfur because their leaders are "black" and "Muslim" is rubbish.....take them out with full force...when they are running for their and their families lives, then they will not have time for rape, pillage, torture, and genocide....the UN leadership must go now, or we should immediately leave the UN and form another international body of like-minded nations supporting human rights without prejudice, hesitation, or religious or political corruption.

All men are not my brothers ... this is a pipe-dream...we have enemies abroad...they daily publish their agendas...good luck seeing anything on CNN with Middle Eastern financial investors and partners.....being a good American should be our first priority, and being the spokesman and if need be leader for human rights our second...damn all religions as they are prejudiced throughout...that was done by the hand of man, and not God.

Take your "criminal" attitufes over here, and I promise you will not last a week...get a life, get an education, get aware of what it is like to fight or work overseas....and get enlightened that we never have been loved as a nation.....but respected we were until the Clinton administration hit the scene...we paid and will continue to pay the price for the "good times" ....respect must be earned in the long term, and instilled with "shock and awe" in the short term...amn is a deadly animal....the people you think you appeal to are not the majority of the world's citizens...animal behavior is the norm when you are trying to survive a day at a time, or when you are told from cradle to grave that Americans are the source of world evil.....

Have fun speaking such "HOGWASH" in one of the few countries you could do so.

With all those tesla fields in that article you pointed out the
government could set up advanced magnetic field resonance imaging
technology which could be transmitted to secret weather satellites and
then re-transmitted into my home computer's printer and published with
me knowing about it.

The whole world might know that I think your idea of weather
manupulation by the U.S. Air Foarce is absurd.

The seller appears to have the radio set up incorrectly too.

I'm pretty sure the Preselector output should be fed into the RF jack directly below it.

He's feeding the signal monitor output into the receiver RF input. If the signal monitor signal is taken from the preselector input (and I expect it would be) it'll work, but I'm wondering if they've rigged it this way because they didn't know better, or if they're doing it to work around a problem.

But of course one of the neat things about a radio like this is you can hook it up to a signal monitor.

In any case, it's a bad idea to buy a radio like this unless you can track down a service manual.

Usually, WJ manuals are quite good, and almost anyone with the proper test equipment and a manual can fix them - but I'm not sure if this applies to the DSP ones - they may use parts that are hard to track down.

When I first started buying rack mount radios, advice I got on WJ's was to look for heavy ones, because the lighter weight ones weren't very well shielded.

Regards,

Mark

Bonaire usually close to pegs my needle here in San Lorenzo. Off the DX-Ultra the signal is best, but the random wire brings it in almost as strongly.

The trick here on the West Coast of North America is to get a decent signal on RNW from Holland (the Netherlands, that is, not Michigan ;-) Even their high power signals from Europe don't manage to get here very well across that high latitude route, *most* days.

As an aside, RNWs Madagascar broadcasts in English on 25m (late morning local time here in California) frequently are very good signals, little fading and clear as a bell. In fact, this is probably the best near-antipodal signal we receive here in California, better than almost anything from India or Sri Lanka or the Seychelles. Also the best bet by far for a QSL from Madagascar.

David, with all due respect, you need to take a step back, and reassess.

I might also suggest you take a look at your facts, and take a look
at both sides.

Re:

> The Bush regime is setting out to radically remake society very
>> quickly, in a fascist way, and for generations to come. We must act
>> now; the future is in the balance. Click to read more...

Hillary, herself, during an interview, just after the first election that put Bill in office, said, when asked what her goals were as First Lady, said, "We're going to change the country."

Think about that, David. Political shadings aside, it's been the goal of every Administration since Reagan left office to 'remake society' and do it very quickly. For generations to come. It's also been true since well before Reagan. That's what the War on Poverty was all about. Which, btw, has spent on fighting poverty enough to make millionaires out of every family in the US, and yet, miraculously, there are more poor than ever.

And it was Democrat overhaul of the accounting rules in '93, that permitted Enron/MCI/Anderson styled corporate raping of the workforce, through practices that had been flat out illegal since the Crash of '29.

It was Al Gore, during his unsuccessful bid, who said in a pre election campaign interview that PBS ran three times that I myself saw, specifically in regard to 'political correctness,'

"There should be limits on Free Speech, and in an Al Gore Presidency, there will be." Think about Al Gore telling you what you can and cannot say. In any context. Remaking society to his will.

In the same interview, Gore said, "The most efficient tool for the reshaping of society in this country, is the tax code. And there are changes that can and should be made using this tool. And in an Al Gore Presidency, there will be." That's as clear as it gets: Reshaping society.

And those are only a few examples. Remaking the society has been a goal on either side of the aisle virtually since the country was founded.

What you find so offensive, is not the act of remaking, but who is doing it. Your own words belie your stated intent.

That makes your comments in the group less the public service for the welfare of all, and more the political rant of the opposition. Not entirely a bad thing, in context. But your facts are distorted, when they're not outright untrue, and your comments are off topic. While some OT content is not objectionable, and sometimes good for a group, you're abusing the privilege.

Which, in the fullness of time, will defeat your purpose for making them.

Re:

>> People look at all this and think of Hitlerï¿½and they are right to do
>> so. The Bush regime is setting out to radically remake society very
>> quickly, in a fascist way, and for generations to come. We must act
>> now; the future is in the balance.

As the grandson of a German National who was shot dead in his livingroom by the Brownshirts for having and listening to a shortwave radio in 1937, I find this remark astonishingly offensive. Not only for

its blatant attempt to smear the name of an American citizen with The Abomination of Homo Sapiens, but for its breathtaking inaccuracy.

If you really think that GW Bush is the second coming of Hitler, you might wish actually read a history book. I'd also recommend 'Mein Kampf.' See if anything sounds familiar.

And if you honestly think you're going to effect a change with your keyboard by disrupting a shortwave radio newsgroup, then you're bigger f*cking pansy ass than any of us thought.

Y'ain't Murrow, here, Pal.

Y'ain't even Drudge.

Oh, and by the way.....BZZZZZZZT! Godwin's Law. Game over.

I apologize to the rest of the group for this outburst. To you, however, David....I put you in the same class as Bryant.

I hope you think before your typical knee jerk response. And I'm sorry I can no longer respect you. And a group member, or as a professional.

And I've only said that twice in my life.

Sincerely,

David Peter Maus.

I think the various lead bans are intended to keep lead out of the air and drinking water. That is, no more lead in gasoline and no more lead based plumbing solder. Much nasiter stuff than lead is used everyday in industrial processes, and there aren't many problems. I'd think government standards for industrial lead use would have to do more with exposure, ventilation and training, rather than an outright ban. But I don't know, and you might be right.

Yep. Tin whiskers. Check out:

http://nepp.nasa.gov/whisker/

Interestingly, one of the recommended ways to reduce tin whiskering is to avoid using pure tin plating and use tin-lead plating, instead.

If I could afford to buy a Watkins Johnson Radio and regardless of what it might cost for repair or service (if ever needed) I would buy a Watkins Johnson Radio.Why? I don't know why,I guess because I think they are fine Radios.I have an old Universal-Radio catalog here which dates back about nine years and the catalog features an ad for a new Watkins-Johnson Radio for not much over three thousand dollars.

However,I certainly am not knocking my little Elgin AM/FM/Clock Radio I bought for one dollar and fifty cents at the Goodwill thrift store yesterday afternoon.When I walked in the door,the Radio was sitting in one of those plastic junk boxes by the wall as though it was waiting on me to buy it.(Hello Larry,the Radio said,Please buy me and take me home with you) By the way,after I cut the light last night to get my beauty sleep,I noticed the Clock light does work,it has a dim sort of a bluish back light behind the clock dial.

When Democracy Failed: The Warnings of History
by Thom Hartmann

The 70th anniversary wasn't noticed in the United States, and was barely reported in the corporate media. But the Germans remembered well that fateful day seventy years ago - February 27, 1933. They commemorated the anniversary by joining in demonstrations for peace that mobilized citizens all across the world.

It started when the government, in the midst of a worldwide economic crisis, received reports of an imminent terrorist attack. A foreign ideologue had launched feeble attacks on a few famous buildings, but the media largely ignored his relatively small efforts. The intelligence services knew, however, that the odds were he would eventually succeed. (Historians are still arguing whether or not rogue elements in the intelligence service helped the terrorist; the most recent research implies they did not.)

But the warnings of investigators were ignored at the highest levels, in part because the government was distracted; the man who claimed to be the nation's leader had not been elected by a majority vote and the majority of citizens claimed he had no right to the powers he coveted. He was a simpleton, some said, a cartoon character of a man who saw things in black-and-white terms and didn't have the intellect to understand the subtleties of running a nation in a complex and

internationalist world. His coarse use of language - reflecting his political roots in a southernmost state - and his simplistic and often-inflammatory nationalistic rhetoric offended the aristocrats, foreign leaders, and the well-educated elite in the government and media. And, as a young man, he'd joined a secret society with an occult-sounding name and bizarre initiation rituals that involved skulls and human bones.

Nonetheless, he knew the terrorist was going to strike (although he didn't know where or when), and he had already considered his response. When an aide brought him word that the nation's most prestigious building was ablaze, he verified it was the terrorist who had struck and then rushed to the scene and called a press conference.

"You are now witnessing the beginning of a great epoch in history," he proclaimed, standing in front of the burned-out building, surrounded by national media. "This fire," he said, his voice trembling with emotion, "is the beginning." He used the occasion - "a sign from God," he called it - to declare an all-out war on terrorism and its ideological sponsors, a people, he said, who traced their origins to the Middle East and found motivation for their evil deeds in their religion.

Two weeks later, the first detention center for terrorists was built in Oranianberg to hold the first suspected allies of the infamous terrorist. In a national outburst of patriotism, the leader's flag was everywhere, even printed large in newspapers suitable for window display.

Within four weeks of the terrorist attack, the nation's now-popular leader had pushed through legislation - in the name of combating terrorism and fighting the philosophy he said spawned it - that suspended constitutional guarantees of free speech, privacy, and habeas corpus. Police could now intercept mail and wiretap phones; suspected terrorists could be imprisoned without specific charges and without access to their lawyers; police could sneak into people's homes without warrants if the cases involved terrorism.

To get his patriotic "Decree on the Protection of People and State" passed over the objections of concerned legislators and civil libertarians, he agreed to put a 4-year sunset provision on it: if the national emergency provoked by the terrorist attack was over by then, the freedoms and rights would be returned to the people, and the police agencies would be re-restrained. Legislators would later say they hadn't had time to read the bill before voting on it.

Immediately after passage of the anti-terrorism act, his federal police agencies stepped up their program of arresting suspicious persons and holding them without access to lawyers or courts. In the first year only a few hundred were interred, and those who objected were largely ignored by the mainstream press, which was afraid to offend and thus lose access to a leader with such high popularity

ratings. Citizens who protested the leader in public - and there were many - quickly found themselves confronting the newly empowered police's batons, gas, and jail cells, or fenced off in protest zones safely out of earshot of the leader's public speeches. (In the meantime, he was taking almost daily lessons in public speaking, learning to control his tonality, gestures, and facial expressions. He became a very competent orator.)

Within the first months after that terrorist attack, at the suggestion of a political advisor, he brought a formerly obscure word into common usage. He wanted to stir a "racial pride" among his countrymen, so, instead of referring to the nation by its name, he began to refer to it as "The Homeland," a phrase publicly promoted in the introduction to a 1934 speech recorded in Leni Riefenstahl's famous propaganda movie "Triumph Of The Will." As hoped, people's hearts swelled with pride, and the beginning of an us-versus-them mentality was sewn. Our land was "the" homeland, citizens thought: all others were simply foreign lands. We are the "true people," he suggested, the only ones worthy of our nation's concern; if bombs fall on others, or human rights are violated in other nations and it makes our lives better, it's of little concern to us.

Playing on this new nationalism, and exploiting a disagreement with the French over his increasing militarism, he argued that any international body that didn't act first and foremost in the best interest of his own nation was neither relevant nor useful. He thus withdrew his country from the League Of Nations in October, 1933, and then negotiated a separate naval armaments agreement with Anthony Eden of The United Kingdom to create a worldwide military ruling elite.

His propaganda minister orchestrated a campaign to ensure the people that he was a deeply religious man and that his motivations were rooted in Christianity. He even proclaimed the need for a revival of the Christian faith across his nation, what he called a "New Christianity." Every man in his rapidly growing army wore a belt buckle that declared "Gott Mit Uns" - God Is With Us - and most of them fervently believed it was true.

Within a year of the terrorist attack, the nation's leader determined that the various local police and federal agencies around the nation were lacking the clear communication and overall coordinated administration necessary to deal with the terrorist threat facing the nation, particularly those citizens who were of Middle Eastern ancestry and thus probably terrorist and communist sympathizers, and various troublesome "intellectuals" and "liberals." He proposed a single new national agency to protect the security of the homeland, consolidating the actions of dozens of previously independent police, border, and investigative agencies under a single leader.

He appointed one of his most trusted associates to be leader of this new agency, the Central Security Office for the homeland, and gave it a role in the government equal to the other major departments.

His assistant who dealt with the press noted that, since the terrorist attack, "Radio and press are at out disposal." Those voices questioning the legitimacy of their nation's leader, or raising questions about his checkered past, had by now faded from the public's recollection as his central security office began advertising a program encouraging people to phone in tips about suspicious neighbors. This program was so successful that the names of some of the people "denounced" were soon being broadcast on radio stations. Those denounced often included opposition politicians and celebrities who dared speak out - a favorite target of his regime and the media he now controlled through intimidation and ownership by corporate allies.

To consolidate his power, he concluded that government alone wasn't enough. He reached out to industry and forged an alliance, bringing former executives of the nation's largest corporations into high government positions. A flood of government money poured into corporate coffers to fight the war against the Middle Eastern ancestry terrorists lurking within the homeland, and to prepare for wars overseas. He encouraged large corporations friendly to him to acquire media outlets and other industrial concerns across the nation, particularly those previously owned by suspicious people of Middle Eastern ancestry. He built powerful alliances with industry; one corporate ally got the lucrative contract worth millions to build the first large-scale detention center for enemies of the state. Soon more would follow. Industry flourished.

But after an interval of peace following the terrorist attack, voices of dissent again arose within and without the government. Students had started an active program opposing him (later known as the White Rose Society), and leaders of nearby nations were speaking out against his bellicose rhetoric. He needed a diversion, something to direct people away from the corporate cronyism being exposed in his own government, questions of his possibly illegitimate rise to power, and the oft-voiced concerns of civil libertarians about the people being held in detention without due process or access to attorneys or family.

With his number two man - a master at manipulating the media - he began a campaign to convince the people of the nation that a small, limited war was necessary. Another nation was harboring many of the suspicious Middle Eastern people, and even though its connection with the terrorist who had set afire the nation's most important building was tenuous at best, it held resources their nation badly needed if they were to have room to live and maintain their prosperity. He called a press conference and publicly delivered an ultimatum to the leader of the other nation, provoking an international uproar. He claimed the right to strike preemptively in self-defense, and nations across Europe - at first - denounced him for it, pointing out that it was a doctrine only claimed in the past by nations seeking worldwide empire, like Caesar's Rome or Alexander's Greece.

It took a few months, and intense international debate and lobbying with European nations, but, after he personally met with the leader of

the United Kingdom, finally a deal was struck. After the military action began, Prime Minister Neville Chamberlain told the nervous British people that giving in to this leader's new first-strike doctrine would bring "peace for our time." Thus Hitler annexed Austria in a lightning move, riding a wave of popular support as leaders so often do in times of war. The Austrian government was unseated and replaced by a new leadership friendly to Germany, and German corporations began to take over Austrian resources.

In a speech responding to critics of the invasion, Hitler said, "Certain foreign newspapers have said that we fell on Austria with brutal methods. I can only say; even in death they cannot stop lying. I have in the course of my political struggle won much love from my people, but when I crossed the former frontier [into Austria] there met me such a stream of love as I have never experienced. Not as tyrants have we come, but as liberators."

To deal with those who dissented from his policies, at the advice of his politically savvy advisors, he and his handmaidens in the press began a campaign to equate him and his policies with patriotism and the nation itself. National unity was essential, they said, to ensure that the terrorists or their sponsors didn't think they'd succeeded in splitting the nation or weakening its will. In times of war, they said, there could be only "one people, one nation, and one commander-in-chief" ("Ein Volk, ein Reich, ein Fuhrer"), and so his advocates in the media began a nationwide campaign charging that critics of his policies were attacking the nation itself. Those questioning him were labeled "anti-German" or "not good Germans," and it was suggested they were aiding the enemies of the state by failing in the patriotic necessity of supporting the nation's valiant men in uniform. It was one of his most effective ways to stifle dissent and pit wage-earning people (from whom most of the army came) against the "intellectuals and liberals" who were critical of his policies.

Nonetheless, once the "small war" annexation of Austria was successfully and quickly completed, and peace returned, voices of opposition were again raised in the Homeland. The almost-daily release of news bulletins about the dangers of terrorist communist cells wasn't enough to rouse the populace and totally suppress dissent. A full-out war was necessary to divert public attention from the growing rumbles within the country about disappearing dissidents; violence against liberals, Jews, and union leaders; and the epidemic of crony capitalism that was producing empires of wealth in the corporate sector but threatening the middle class's way of life.

A year later, to the week, Hitler invaded Czechoslovakia; the nation was now fully at war, and all internal dissent was suppressed in the name of national security. It was the end of Germany's first experiment with democracy.

As we conclude this review of history, there are a few milestones worth remembering.

February 27, 2003, was the 70th anniversary of Dutch terrorist Marinus van der Lubbe's successful firebombing of the German Parliament (Reichstag) building, the terrorist act that catapulted Hitler to legitimacy and reshaped the German constitution. By the time of his successful and brief action to seize Austria, in which almost no German blood was shed, Hitler was the most beloved and popular leader in the history of his nation. Hailed around the world, he was later Time magazine's "Man Of The Year."

Most Americans remember his office for the security of the homeland, known as the Reichssicherheitshauptamt and its SchutzStaffel, simply by its most famous agency's initials: the SS.

We also remember that the Germans developed a new form of highly violent warfare they named "lightning war" or blitzkrieg, which, while generating devastating civilian losses, also produced a highly desirable "shock and awe" among the nation's leadership according to the authors of the 1996 book "Shock And Awe" published by the National Defense University Press.

Reflecting on that time, The American Heritage Dictionary (Houghton Mifflin Company, 1983) left us this definition of the form of government the German democracy had become through Hitler's close alliance with the largest German corporations and his policy of using war as a tool to keep power: "fas-cism (fbsh'iz'em) n. A system of government that exercises a dictatorship of the extreme right, typically through the merging of state and business leadership, together with belligerent nationalism."

Today, as we face financial and political crises, it's useful to remember that the ravages of the Great Depression hit Germany and the United States alike. Through the 1930s, however, Hitler and Roosevelt chose very different courses to bring their nations back to power and prosperity.

Germany's response was to use government to empower corporations and reward the society's richest individuals, privatize much of the commons, stifle dissent, strip people of constitutional rights, and create an illusion of prosperity through continual and ever-expanding war. America passed minimum wage laws to raise the middle class, enforced anti-trust laws to diminish the power of corporations, increased taxes on corporations and the wealthiest individuals, created Social Security, and became the employer of last resort through programs to build national infrastructure, promote the arts, and replant forests.

To the extent that our Constitution is still intact, the choice is again ours.

Thom Hartmann lived and worked in Germany during the 1980s, and is the author of over a dozen books, including "Unequal Protection" and "The Last Hours of Ancient Sunlight." This article is copyright by Thom Hartmann, but permission is granted for reprint in print, email, blog,

BpnJ - I second that ~ RHF

The Kiwa Upgrades (Mods) to the Icom IC-R75 (R-75) make it a
better Receiver. You can Hear {Feel} and See the difference
in the Performance and Sound of the Receiver from Before to
After - IMHO

Icom IC-R75 (R-75) Performance Upgrades by Kiwa Electronics :
http://www.kiwa.com/R75.html
* Kiwa Synchronous Detector Upgrade
* Kiwa Audio Upgrade
* Kiwa High-Fidelity Audio Filter
* Kiwa AM BCB RF Attenuator Disable
* Kiwa R75 Filter Module
.
.
. .

Sanjaya,

Icom IC-R75 (R-75) Performance Upgrades by Kiwa Electronics :
KIWA => http://www.kiwa.com/R75.html

#1 Must Do = Kiwa Synchronous Detector Upgrade

2 Should do = Kiwa Audio Upgrade

3 Worth doing with #2 = Kiwa High-Fidelity Audio Filter

4 Do only 'if' you are into AM/MW DXing then get
the "Full" Mod Kiwa AM BCB RF Attenuator Disable

5 Worth doing 'if' you don't like play with the Twin PBT
and simply want to select a Filter = Kiwa R75 Filter Module

My Icom IC-R75 is a few years old and has the original Kiwa Mods :
* Kiwa Synchronous Detector Upgrade
* Kiwa Audio Upgrade
* 3.8 kHz IF Filter Upgrade for 450 kHz AM-Sync
(not available any more)

hope this helps ~ RHF

RHF wrote a pretty good assessment overall:

>Icom IC-R75 (R-75) Performance Upgrades by Kiwa Electronics :
KIWA => http://www.kiwa.com/R75.html

#1 Must Do = Kiwa Synchronous Detector Upgrade <

YES! The AGC fix here is key.

>#2 Should do = Kiwa Audio Upgrade <

YES! A big help, nicer audio.

>#3 Worth doing with #2 = Kiwa High-Fidelity Audio Filter <

Yes, but note that this may *slightly* increase the potential to induce audio heterodynes. I think that potential is small, but check with Craig at Kiwa.

>#4 Do only 'if' you are into AM/MW DXing then get
the "Full" Mod Kiwa AM BCB RF Attenuator Disable <

Maybe. This provides only a 3dB increase in the MW sensitivity, and if you have AM blowtorches near your house, it may adversely affect SW. I find that my own radio is plenty sensitive enough on MW, and the nearby stations are patently obnoxious.

>#5 Worth doing 'if' you don't like play with the Twin PBT
and simply want to select a Filter = Kiwa R75 Filter Module <

The old filter fix was a better one (see below)...

>My Icom IC-R75 is a few years old and has the original Kiwa Mods :
* Kiwa Synchronous Detector Upgrade
* Kiwa Audio Upgrade
* 3.8 kHz IF Filter Upgrade for 450 kHz AM-Sync
(not available any more) <

Same as mine, plus I have the 15 kHz filter reduced to 6 (which is plenty wide enough for AM but affects FM modestly). That old filter fix was the cat's pajamas, yielding an excellent array of filtration plus ability to filter on AM and S-AM both, and very flexible use of the PBT. The new one, apparently, does not give the full flexibility on S-AM or with the PBT (no fault of Kiwa, BTW - he's doing his best).

Fie on Icom for creating a potentially excellent radio with a bunch of goofy flaws!

Greetings,

Give the "new" QSL-ware version of WinCAP Wizard a try. It not only provides beacon tracking, but also propagation predictions, a grayline map and more.

Plus, it's priced right. <VBG> Several other tools also available.

www.taborsoft.com

Cheers,

Nothing comnparable replaced it imho. If you are looking for a 2010
then look for a good used one. It is a very nice radio, and nothing
comes close to it's size, good design, performance and ease of use.

That said you will get good performance from a Sony 7600 current model
at $130.00 or almost as good performance from a little chinese Degen
DE1103 for about $50.00

The fix is easy for persons experienced with printed circuit work. The problem is a cold solder joint for the clock oscilator. I consider this a factory defect, and don't understand why CCrane or Sangean don't warranty their work even after several years.

I know something about lead dust in the air.I once worked at a factory in Florence,Mississippi that manufactured batteries for cars and 18 wheeler trucks and lawn mowers and also six volt old style batteries for older model MG cars.The factory had a lot of big ducts in the ceiling and big vacuum pumps that pulled the air inside of the factory up into the ducts and that air was filtered with big industial filters,the factory couldn't let lead dust get into the air outside of the factory.At regular intevals,our blood was tested to see if there was any lead getting into our blood stream.Sometimes,we would have to wear little Miners vacuum pumps in one of our hip pockets during our work shifts.The little Miners vacuum pumps had a piece of clear flexible hose and a clip that let the hose be clipped on our shirts up near our necks and there was a little round holder thingy with a little special piece of paper in the holder.The little papers were sent off somewhere to be tested.It it was determined we had been working too long in whatever part of the factory and we were breathing air that had too much lead dust in the air,we were moved to another part of the factory for a few weeks that didn't have as much lead dust in the air.It was a lot of loud noises inside of that factory too and at regular intervals,there was a van that had special instruments and earphones that we put on to see if we could hear certain kinds of low volume noises.If you were in the Military before,you know what kind of hearing test I am talking about.At the end of our daily work shifts,we all took a shower and put our regular clothes on and we left our work uniforms at the factory.Nobody wants to get home from work and spread lead dust all over the place.y'all think Iraq is hot in the Summer time,,, go work in an auto battery factory and y'all will know what real heat is like,I Guarantee y'all that!

100 percent keerect,I first have to have a mind.That's why mind control can not work on me.I didn't see any radios at the Goodwill store this afternoon,but I bought a nice Skil model 595 belt sander (it has a little baggy on it for catching sanding dust) for five dollars.I plugged the belt sander in a wall outlet at the store and let it run about three minutes.I didn't smell any burnt out motor smell,but the motor made a sort of a wheezy screetchy noise when I shut it off.A couple of drops of 3 in 1 oil will fix that.And I bought an old wooden folding chair for three dollars and two old books for one dollar each,Lying Prophets by Eden Phillpotts,published 1897 and The Works Of The Rev.Jonathan Swift,D.D.Dean Of St.Patrick's,Dublin,Ireland.published 1871.I am going to especially enjoy reading that book.

Where did you get that priceless piece of information? The orbit of Mars, like most planets is an oval shape and every two years the orbit of Mars brings it to it's closest approach to the earth. In Aug 2003 it made it's closest approace in 60,000 years...34.9 million miles. Since then the closest approach has been getting further away. The maximun distance from earth is just over 248 million miles.

Doesen't it seem strange you are completely stupid? No, not really.

Not quite. After his death his trunks with all his papers diplomas,
other honours, his letters, and his laboratory notes were impounded.
These were eventually inherited by Tesla's nephew, Sava Kosanovich, and
later housed in the Nikola Tesla Museum in Belgrade.

Tesla lived in Colorado Springs, Co from 1899 to 1900 were he conducted
experiments. He did not endear himself with the city fathers when one of
his experiments took the power plant down and plunged the entire city in
darkness.

There used to be a Tesla museum in Old Colorado City (just across the
interstate from Colorado Springs), but it was closed some years ago due
to lack of funds and unfortunatelly a lot of the items dissappeared.

You can thank Tesla for AC current.

I purchased the Sony ICF-7600GR and should get it in a few weeks.

I was also looking at scanners that can "hear" above 30MHz. This particular one goes up to 3GHz. It's the portable AOR AR-8200 MKIII B.

My question is, since I am new to all this, what frequencies does the default antenna that comes with the unit allow me to get? And do I need to buy other antennas to get other frequencies? How many antennas will I need to get all frequencies? Is this a huge cost?

Since it's a portable unit, I am assuming I don't need one of those huge antennas that you see at some peoples houses sticking out of their backyard 300ft high (obviously no HOA [home owners association] there.)

Huh?

The only way you can hear signals bounced off the moon is if they
are aimed there in the first place. That means a deliberate use of
the moon as a passive repeater. It does get around the issue of line of
sight at VHF, but it's not something one can use for "eavesdropping".

Moonbounce was first tried by the US Signal Corp right after WWII, I
think it was 1946. But it needs big antennas and/or high power, and
thus it's really not practicaly until you get into the VHF range of
frequencies. I seem to recall the first moonbounce was around 112MHz.

It didn't take very many years before hams did it, using much less
power and I think smaller antennas. I think it was 1953.

Before there were communication satellites, there were passive satellites
launched where signals were simply bounced off their surface, just
like moonbounce.

There was a time or two in the sixties, after Sam Harris (who had been
one of the better known hams to do moonbounce, but then at the time
it was a relatively small club) moved to Puerto Rico to work at the
radio telescope, that Arecibo was used for amateur moonbounce. With
an antenna that size, there was enough gain that far weaker signals
were receivable, so people with average antennas were able to participate
in the test(s). Sam is credited with the line "if your antenna stays
up all winter, it's too small).

With time, it got easier. Ray Naughton (I spelled that wrong) in
Australia had a lot of space, so he put up stacked rhombic antennas f
for moonbounce, and succeeded even though there was a power limit for
Australian hams at the time of 150Watts or so. His problem was that
the rhombics were fixed, so there was a limited number of days each
month that they were aimed at the moon.

With time, the number of hams capable of moonbounce went up. It became
easier to generate power at the suitable frequencies, and more was
learned about antennas and weak signal work. Solid state helped too,
because they had lower noise figure than most tubes. And once there
were enough with really good stations, it made it easier for others,
because their capability meant that those with smaller antennas could
still do moonbounce.

Michael

Who..? The space alien Tralfamidorians from Alpha Centauri? I was already abducted by them once, and they explained to me how all huricanes are caused by their secret tele-transporter rays, beamed down from their special covert moon base.

Actually, if you use a 'Captain Midnight secret decoder ring,' in cereal boxes from the 50's, you can count the vowels in each huricane's name, multiply by the year's last two digits, and use the 'B' option to decode the occurance factor of the next major tropical storm in the Carribean region. I hear the U.S Weather Service does this all of the time.

Cool huh..?

>that a signal can travel far. But I am not sure if that is true.

It's a VHF and microwave thing. You actually illuminate the Moon
with enough power that another station back on Earth can pick up
the reflection. But that requires an antenna that can focus most
of your power on the Moon, a target only 1/2 degree across. Hams,
with 1 kilowatt, can get morse code and slow digital signals (on the
higher bands).

Before satellites the Defense Department was able to send several
teletype channels at at time, maritime mobile. That was with a big dish
and probably 10's of kilowatts. (The best description of using that
equipment, that I've seen, was in a description of the incident where the
USS Liberty, the radio intelligence ship, was attacked by the Israelis.
In the Atlantic Monthly about 10-15 years ago, as I remember).

About three weeks after Katrina hit around here in the Jackson area,I started seeing many hundeds/thousands of tiny flying insects flying around and plastered on the front ends of peoples vehicles.About two weeks later,they were all gone.Funny looking little flying insects about half an inch long and with two sets of wings,one set of wings spaced about a quarter inch behind the foward set of wings,sort of like little Helicopters with two sets of rotor blades,both sets the same size and exactly alike.I had never in my life seen any flying insects like those before,especially around here in the Jackson area.I wonder what kind of flying insects they were,is there an official scientific name for them.I think Katrina blew those flying insects over this way from some swampland areas down South,somewhere.

I heard 279 kHz (Yuzhno-Sakhalinsk) around 6-7:15AM(Oct 21st) in San Francisco just using an old Radio Direction Finder. It was strong enough at one point to be heard on my Grundig YB400.

So, is Yuzhno-Sakhalinsk the actual transmitter location? That Russian LW station seems to be the strongest.

From: SR <mercury@mfire.com>
Message-ID: <11ljame8u06a71b@corp.supernews.com>
Source record: 45538

Cool. The main reasons why I do not like sounds from PC or computers is a) you need a computer running, b) you may need to be online or you might need to download a large file, c) computer speakers (made of plastic) sometimes have a strange thin sound to them. It's like a high hollow shiver.

Moreover, I like do not like to depend on the computer for everything. A nice CD or cassette will do fine.

Being able to study radio sounds & radio airwaves sounds can be a wonderful thing to do during those times when you want to listen to radio and not much is going on.

Those of you guys out there who have the equipment and knowledge to make these mysterious recordings along with a book explaining them, here is an opportunity to market a nice product.

Thank you, SR!

Well, the links that I provided were regarding the so-called "Conet Project" which was nothing more than some dudes who collected/compiled various recordings "number station" clips from the Cold War era. The first link is just some info on number stations in general, the second is for where you purchase the 4-CD set, and the last is where you can download the spy number clips in *.mp3 format.

I guess it's something to listen to when you're reminscing about Brezhnev and that sort thing.

As for the "Conet Project", I believe that, for a time, some of those counter-culture and wannabe counter-culture youths found it fashionable to pass these number station recordings off as "ambiance music." After they had duly impressed one another by displaying their fashionable taste for the stuff, I'm sure it got old for them quite quickly, and they moved on to somethin' else.

$69 Radio Shack Discone Antenna

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=20-043

If you're going to be listening to several different bands, I would get an antenna switcher and run several different antennas if for no other reason than to see which antenna will best suit your needs. I would be tempted to run more than one antenna unless you are going to be listening to one band.

Why is it going to take a month to receive your radio?

By the way... How good your antenna is, is directly proportionate to the number of neighbors you have complaining. Top notch antennas usually draw complaints from the FAA (Federal Aviation Administration). To keep them off of your back, try painting your antenna towers in alternating red and white bands, placing red flashing lights up the towers for every 100 feet in height, with a flashing white strobe at the very top.

For something simple, ask your neighbors if you can string a thousand feet of antenna wire between your house and theirs.

Oh! You like cats?
So do I... Wanna exchange recipes?

If you have an analog radio it just sounds like static noise trashing
three channels.

If you have a DRM radio it just sounds like low bit rate audio. In other
words it sounds like crap with audio artifacts aplenty.

3348. Radioism... The Disease

Newsgroup: rec.radio.shortwave
Date: 2005-10-22 04:48:49 UTC
From: Don <DonW3@comcast.net>
Message-ID: <RL-dneLwl5otWcTeRVn-ug@comcast.com>
Source record: 45707

Radioism is a chronic illness characterized by the habitual listening of shortwave radio. This is done to the degree that it interferes with physical or mental health, or with normal social or work behavior. It produces both physical and psychological addiction. Signs of radioism include anxiety, inhibition, and feelings of guilt. In high doses, it can cause loss of consciousness and even death. Chronic radioism damages the brain, hearing, and eyesight. Carpal Tunnel syndrome can also result.

Spotting the signs and symptoms of radioism is not always easy. While radio-related arrests or job loss can be signs of radioism, they tend to happen late in the disease. Many signs occur earlier, yet are harder to detect. These signs include:
* An increasing tolerance to the effects static. This is not seen as a sign that this person will not have problems with radio. In fact, this may be an early sign of the disease.
* A growing preoccupation or interest in listening to radios, or dreaming about radios. Sometimes those with radioism go as far as buying illicit radio magazines, radio parafinalia, radio internet chat rooms, and worst of all...radio newsgroups. It may seem as though one simply enjoys radio listening. We now know that these signs are the first symptoms of radioism.
* A person will dispute there is a problem. This symptom, called denial, is almost always present in radioism.

Later, difficulties in relationships, on the job, or with the law often occur. Other signs and symptoms are of the disease are:
* hiding radios or sneaking around listening to radios when no one is around,
* Obsessive Radio collecting also known as RCOCB (Radio Collecting Obsessive Compulsive Behavior)
* using headphones so no one can hear what you're doing,
* wanting to listen more, or longer, than the rest of the crowd,
* losing control of radio listening, leading to attempts to control it ("going on the wagon.")

It is very important to seek help early in the disease. As the disease progresses, severe health problems and injuries occur in almost every body system.

If you want to learn more about the signs of radioism, consult your healthcare provider or look in the yellow pages for "radioism" or "radioism treatment". You may also wish to contact the National Council on Radioism at (800) RADO-ISM for more information. Many cities and towns have Radioism Anonymous (RA) meetings. These are meetings for people who have a family member with radio listening problems. If you go, you'll learn more about how radioism affects families and what you can do. The most important thing...

Get one of those little sound amplifiers at Radio Shack.(I own two models of them) They look sort of like tiny transistor radios and you have to use ear buds or ear phones with them,they do not have a built in speaker.Put the device inside of a sock and stick it between one of your leg joints near your hip and your belly.You will hear some very,very strange sounds indeed,coming from your stomach guts.

Source record: 45710

I sent my Drake R8B to the factory today. I had one of the drones where I work do a foam in place so that I could be assured it got to Drake in one piece.

I sent radio in for a tuning mechanism replacement and a thorough going over and tune up to bring it up to specification. I am an electrical engineer from a top rated US school, but not a dummy, so this job goes back to factory. If you are interested in this receiver then Email me. Yzordderrex@verizon.net I paid good money (a fair price) for the thing and I am not going to give it away. On the other hand I don't care to make any money on the radio. I offer to you guys because I will be here at newsgroup for a long time and I rather somebody I know on this group has the radio than somebody I don't know on Ebay. Then there is always the possibility that you will get tired of radio and may want to sell radio and I will buy back from you down the road. I like to keep a steady stream of radios going in and out of shack.

Radio is with MS8 speaker and VHF option. Software is Rev 12, which is I am told by factory latest rev.

In the movie Frankenstein, I remember seeing tubes in the laboratory. Besides the monster being scary looking, the tubes and electricity in the laboratory was also very scary.

There was also two large electric bolts. I think that was real because I had seen things like that in Edison's photos.

I wonder if these tubes were real or made up to make the movie even more scary? Also, taking consideration the times: It would be normal to see electric tubes in a lab.

But by today's standard, we would see that as very scary, mysterious, archaic, even gothic. Just the same way if today we made a movie like that, we would probably have common looking computers. And people in the future who no longer use external computers would look back at it the same way.

If I remember right this was a silent movie of the late 20. I have to check my Hound Dog Movie Book.

A man can think a lot of thoughts and walk a lot of pavements between afternoon and night. And to a man like SR, to whom memory has suddenly become reality, a resolve can come just as clearly and inexorably as stars in the summer night. SR is now back in time. And his resolve is to put in a claim. To the past.

It seems halloween has turned into a month long event. A guy down the street has no less than 30 halloween figurines in his front yard along with lighting. Another house has Christmas style lights strung on the outside of the house except they are orange in color. These have been out for at least two weeks.

3369. Figuring out radio locations by area

Newsgroup: rec.radio.shortwave
Date: 2005-10-22 07:22:15 UTC
From: SR <mercury@mfire.com>
Message-ID: <11ljq6ibe11pcd2@corp.supernews.com>
Source record: 45730

I am located in New York City and I located a commercial radio station in Toronto CKLW AM 800 KHZ.

On a simple map I roughly conculated that the distance is 800-1000 miles away. However, if I am able to pick up that far away on a medium wave am band, I should be able to pick up a lot of other stations by area.

That should cover parts of Virginia, West Virginia, Baltimore Pennsylvania, Maryland, New Jersey, Mass, Vermont, Conn, New Hamp, Maine & RI. On the other side of the map is the Atlantic Ocean from my location.

Taking in consideration this station in Toronto is not using a repeater. And trying to figure out how much wattage power their transmitting.

I wish I had a map where my location was in the middle of the map. And I would like to learn how to go about learning this type of geographic science for radio purposes. This way I can figure out which dx on medium wave I can look for.

Is their a word in doing this with a map & compass?

SR

go to www.tonnesoftware.com and download a program called Pizza. Now you
have a map with you in the middle.
Look for a program called DXAtlas. It has a compass/distance mode too.

Brad.

The past is real. The past is historical. The past proves who we are. The past is our reference point. The past has the wisdom we should bring to our present time.

Of course the future is important too. But are we ready for it? Or are we rushing to it too fast?

Halloween really is an astrological period (ancient astronomy) when light meets dark. Thus a natural phenomenon. Sure there is a lot of folk lore around this. However, it all depends at what level you want to look at it.

A positive plus a negative equals a negative. Now, we need to figure out what a negative really is.

One way of looking at it: Do you remember those little plastic hand held games that had little plastic numbers that you slide back & forth to bring the number into sequence?

Well, if you notice there was always a black blank space. Without that one black blank space, moving the numbers would be impossible.

Therefore on this plane, life can not exist without death. Understanding depends on mystery!

I noticed a few of those myself, particularly the 6800 since I also have one. Made me tempted to sell mine, but I really suspect there was something fishy going on since the two high bidders were both new, and the winner was overseas. I think a lot of these have something else behind it, rather than legitimate bidding.

I was thinking the other day, wouldn't this be the perfect way to move money overseas? Set up a couple of Paypal accounts, and stage fake auctions. We don't know if there ever was an actual Sony 6800W delivered, or if it even existed.

The Dutch SW pirate Alfa Lima international will be active again this
weekend.

Just as last week the frequency's used will be 15070 and 21860 khz
Both in Amplitude modulation.
Last week we haven't been that much on 21860 as we planned but most likely
we will be also there this weekend a lot more.
During the transmisions we will be a lot in the SW pirates chatroom on
http://www.alfalima.net/chatroom/
and keeping our eyes on the sw pirates forum at www.alfalima.net/forum
contact information is below.
If you like to get more information on sw pirates our tip would be

810 AM out of Schnectity New York 10 PM to 1 AM week nights.

Agreed. I think Phil is the best of them all. I download his show to
podcast but it's not as good as radio because they cut out all the
music so they don't have to pay RIAA royalties.\\

It's still there. There is no 800 kHz station in Toronto but CJAD in
Montreal is on that freq.

Always watch out for hyperbole. It sounds surprisingly good, for low bitrate
audio, and quite different from AM on shortwave.

I don't know how it is nowdays,but some people whom were planning an Ocean Voyage,they would check out some Freighter Ships.Real good food and decent living quarters and first hand looks at how those Freighter Ships work and usually cheaper prices too.Of course there is always the good old Stowaway method too,sort of like Hobos hopping Freight Trains. www.vivisimo.com Hobo Convention Britt Iowa (a couple of my old buddies were once thinking about hopping a Freight Train just to see what it is like,their wives talked them out of it,y'all d..n fools can get killed doing that) I noticed one of those new Freighter Ships is named the Peking Senator.Seeeee,I told y'all before Peking is still Peking to me.And Tokio is still Tokio to me.y'all ever heard of Tokio Rose before? Ala World War Two. www.vivisimo.com Tokio Rose World War Two
(I don't know what's up with devilfinder.com,maybe they are updating/rehashing their website or something)

You can buy a large map of America (foreign countries too,or look them up at online book stores) at a book store and get a pin and string and pencil,or use two pencils instead of a pin.Put the pin in the center of your home town (on the map) and use that as a simple compass to get the miles distance from your home town to other towns/cities.Rand McNally Road Atlases have a map page with the miles distance from major cities to other major cities.Rand McNally Road Atlases are sold in book stores and Wal Mart stores and and similar department stores.Rand McNally Road Atlases are great to have.I bought a new Rand McNally Road Atlas for $4.97 a few years ago because my dog ate the Oklahoma/Oregon page out of my old Rand McNally Road Atlas when she was a little puppy.

Hi

I'm in Miami FL and on Saturdays they broadcast the last weeks Sat show at 11:00 PM EST then broadcast their live regular show at 1:00 AM EST.

I used to listen to them all the time, but since Art Bell left, the whole thing has fallen apart IMO. George is a nice guy, a very very nice guy, but he has no "radio charisma" and the guests he's been having on have been total idiots. Not entertaining at all.

There is some new guy on Sat nights now I think. I haven't even listened to him once. Has anyone here listened to him yet? Any good?

Does anyone else here think the show has gone down hill since Art left?
I wonder why he really left?

Lucky

Hi Dave

I totally, totally agree with you. To people with even a tiny little piece of shit for a brain can see it, but most don't even have that.

You are right on when you say there are a growing brand of hateful Christians who are also have a Nazi mentality. But this time, they won't get away with it though. Why? They are too stupid. If you just look at these people you can see what morons they are. They know this all too well, so in anger to get "even", they will pull any slimy, pussy, hidden, unhumane things they are. This makes them feel "smart now" but deep inside they know the truth. They are just filled with pure HATE. Luckily it's not real smart hate. Just low life things and these low life things makes them feel smart and "see, I'm smarter then you" These are things I know I couldn't and wouldn't do to them so this makes me better then them. I am above them in every way. My morals and considerations couldn't be matched or compared to

them in any way. They have no brains, no mercy, no kindness, no consideration, no laws or rightful way of thinking.

This is why G-D himself will remove them from this planet.

Snakes feel good too when they outwit a poor animal and kill it. Snakes are not too smart, but they feel smart and just in their kill. I compare these people to these snakes. They are slimy and creepy but because they have certain abilities and resources, they make the kill. But in the big picture of all this all you have is a slimy creepy little evil thing that is actually not too bright but does it's dirty deeds are lives off it happily.

All they have for resources to fight you is connections to have dirty deeds done dirt cheap for them. They pull backroom hidden slimy things to get even with you. They don't fight like men, they fight the only way they can which is slimy filth to hurt you cause that's all they can do .

I saw these Nazi children singing Hitler songs on 20/20 or Primetime the other night. The good part is they were turned away by most good people. Yes, there are still good Christians out there, but there is brand that hates everyone that doesn't think and feel their way.

Plus your other points are well understood and taken. Blacks and Jews are high on their list and the Mexican aliens that think they have entered a "land of opportunity" are just the Neocons new slaves. I thought about it and that's the real reason they don't want to stop it.

Plus, the gov't turns it around on you by making you hate them so they can be used and squeezed dry like a rock and no one cares. I now feel bad for these people now because they came here for what they think are the right reasons to a land of what's good and right but in reality live like pigs 60 to a house cause that's all they can afford to pay. They make the "illegals" feel like criminals so they'll be happy with ANY amount of pay some head of a corporation will pay them. They are being used like real animals and real slaves.

The gov't cares so little about it's own people too but allowing this new slavery. So, if you think hard about it, you see who really wins.

Do the American people win? NO
Do the illegal aliens win? NO

bush, his administration and good old boy networks and large political biased corporations win. They use us, abuse us but one day it will come falling down collapsing all around them. Like I said, their screams of mercy will go unanswered....

The "illegal aliens" are the rights new slaves replacing black slavery. Now, it's semi legal slavery. These poor people will take anything in pay to feed themselves and their parents and children back home. So pay them $5 to shovel shit in the hot sun all day and they'll do it while the company that is hiring them is saving money not only on wages, but health care and taxes.

These Mexicans are a gold mine for these people. We don't have a real gov't anymore. People now don't follow the law but make up their own laws and enforce them themselves. But it will all come crashing down on them soon. I will relish in their downfall and end of days screams for mercy but they will sow what they reaped.

Lucky

Radio big shots is radio big shots.

Every time you buy a Coke or chew Wrigley's gum you are paying to
listen to commercial radio (whether you actually listen or not).

What I do is buy stuff that doesn't advertise heavily, and spend the
difference on making my life more fun.

That info doesn't really surprise me. I've sold to at least a dozen overseas Ebay buyers in the last few months and will continue to as long as things go well. All of them were very professional and paid dearly for the items. Several of them actually thanked me for selling internationally since few people do. Sellers who aren't afraid to ship internationally will make lots more than those who only want to do US sales. There's many wealthy foreign buyers wanting our stuff.

What you do is buy the same crap everyone else buys, but in addition
you have to pay for your radio listening. That stinks.

Not all of them do. Longer wavelength signals like those in the
broadcast band do not penetrate the ionosphere.

Know a guy who, being ninteen at the time, said he walked into a freigh
yard in Okland (AT NIGHT)
told a guy he was a College student heading back to NY.. & they said
" be careful."..& pointed to a train..
Got a ride all the way to Bonneville salt flats , where a railroad
guard kicked him off

Hobo Convention.. Ride to.. - Should be doeable if your in shape..
Travel in pairs & such.. Even Legit... get credentials, hook up with a
Newspaper & do a story on it.. or a $50 to a railroad worker Might work
too
:-)

In Mexico, used to be able to ride up front with the Engineer on the
Narrow gague Railway, cooking tortillas on the Boiler at night riding
through the countryside..

I think Freighter travel is the way to do that nowadays..
You can come back unscathed from that one

If you go to www.fcc.gov, you can find web pages that give you searches
into the FCC database that give you all the stations' data, including
latitude and longitude down to a tenth of a second (I think that's about
10 feet or so).

I used the one for FM radio a couple of weeks ago. I think it
was http://www.fcc.gov/mb/audio/default.htm and look for a link
that says "AM Query" or something like that. (I used the FM Query
where you give it your latitude and longitude in deg/min/sec and
it will tell you all the stations out to a given radius. Maximum
400 miles, or something like that).

You get back a cryptic table of stuff, but the azimuth in degrees
and the distance in miles is useful.

I hack out some stuff I simply felt no nedd to coment to get to this
stuff

the trouble is that somehow since 2000 the left got the script for
their glasses so screwed that they CAN read Mein Kampf and see or think
they see GW Bush

I as the great grandson of Man reviled as a fool at first first (and
later the only survivor of the family) for fleeing the Sudatenland when
Hitler took power. am no longer offended by such blindness but
freightend by it

No, I don't. My 5th grade teacher made me read the Hidden Pursuaders.
I have been hip to marketing and motivation since I was a little kid.
Name brand shit is generally inferior. Campbell's Soup, for instance,
tastes like paint thinner if you haven't eaten any for a while.

Anybody who spends $4,000 for an AM radio that gets maybe 20
listenable programs a day has no room to get on someone else's case
for paying $13 a month for 120 channels 24/7.

I have a relative in that book. I come from a long line of fascists.

''All this was inspired by the principle - which is quite true in
itself - that in the big lie there is always a certain force of
credibility; because the broad masses of a nation are always more
easily corrupted in the deeper strata of their emotional nature than
consciously or voluntarily; and thus in the primitive simplicity of
their minds they more readily fall victims to the big lie than the
small lie, since they themselves often tell small lies in little
matters but would be ashamed to resort to large-scale falsehoods. It
would never come into their heads to fabricate colossal untruths, and
they would not believe that others could have the impudence to distort
the truth so infamously. Even though the facts which prove this to be
so may be brought clearly to their minds, they will still doubt and
waver and will continue to think that there may be some other
explanation. For the grossly impudent lie always leaves traces behind
it, even after it has been nailed down, a fact which is known to all
expert liars in this world and to all who conspire together in the art
of lying. These people know only too well how to use falsehood for the
basest purposes.''

Dear Harvey,

Your post has drawn quite a few comments but no reply to your question!

My suggestion would be the Sony ICF-SW7600GR which is an excellent portable shortwave receiver. It is quite sensitive and selective and offers a synchronous selectable sideband circuit which makes SW listening much more pleasurable. I would also recommend your friend consider the Sony AN-LP1 active antenna which can be placed near the porthole in his/her cabin, though it may not be 100% necessary.

While I do not have any personal experience using this radio on board a ship, I have used it at a number of oceanside communities (on piers, boardwalks, etc.) with just its built-in whip. It works very well in such locations - reception always appears to be better near the ocean and I presume that ON the ocean it would be better yet.

The radio is relatively small and can be powered by 4 AA batteries, either alkalines or rechargeables. Obviously on a ship, your friend would want to carry a supply of alkaline AA batteries. The radio plays for quite a long time with a set. (The AN-LP1 antenna takes 2 AA batteries.)

I hope this is of some use to you.

Best,

Joe

Message-ID: <5Yw6f.19769$q1.12305@newsread3.news.atl.earthlink.net>
Source record: 45568

From 1830 to 1900 UTC today Oct. 22, 2005
I was hearing VOA on 11865 kHz.
They were playing John Denver music, interspersed with
what sounded like a European language between songs.

A VOA ID came up in English just before 1900 as they
went off. The only reference I can find is the latest
EIBI data showing it was VOA:

1800 1900 USA Voice of America TU TUR 792/GRC 11865/CLN
(so Turkish language/target Turkey?)

The CLN code gives me this at the end of the EIBI data for transmitters:
VoA: Iranawila 07N32-79E30

VOA's site says :
Turkish 1800-1900 UTC on 792 11865 11925 15235
http://www.voanews.com/english/about/frequenciesAtoZ_t.cfm

What and where is Iranawila???

?

CLN is Sri Lanka... Iranawila is the transmitter site in Sri Lanka.

Pretty simple!

Signal disappeared just prior to 2100 which would fit Shabele's sked.

Had the AGC off and got blasted by Lincolnshire Poacher s/on at 2100 on 6959.

Yep,goliethslayer,, you do know what a parking brake is.The one I have is Octagon shaped and there is an inset bar on top of it that stilll has a piece of old rope tied on it.Usually there was an iron hook thingy on the other end of the rope for hooking it onto the Horses Bridal.About the only thing that would cause a Horse with a chunk of Iron like that hooked to his or her Bridal to run away would be if a Snake slithered by,,, in that case,,, you better get out of the way!

Not her usual signal strength. In winter, LP has a big signal, here in
Spring, sunrise was 2 1/2 hours ago and she is only S1.
Meanwhile at 2120z, 40m is open due North to JA and Indonesia with good
signals, so she's not from that direction!

Brad.

I went to the Goodwill store this afternoon (as usuall) and for two dollars,I bought a Fish Cooker that works on LPG gas.Since those two women next door to me like to grill and cook food outside in their driveway and since the 37 year old blonde Bell South woman (she is in Ripley,Mississippi this weekend for a primitive weaponry exibit thingy,she used to make and sell primitive weapons before she went to work for Bell South five years ago,that gal is very smart) I gave the Fish Cooker to them.(the 30 year brunette woman was over there when I got back from the Goodwill store) I also gave them an electric corn cooker thingy I bought at the other Goodwill store that usd to be on Palmyra Street in beautifull down town Jackson.What it is,it has a sort of a spoke thingy that fits on top of a shaft in the middle (ya gotta hit it in the middle if ya wantta get a "little") and the cooker heats up (it has an on/off/temperture control knob on it) and the spoke thingy slowly rotates around and rotates the corn around for even cooking.

That frq might be hard for me to tune into because of WNYC 820.

But I'll give it a shot. I probably use my Hammarlund 180 radio and use the SSB and Slot/Freq knob. Although I will not be in perfect tune but I might be able to find a small spot were I would pick the station up.

jeff,

whats a radio direction finder??? is that a green radio made by
ratheon? i just picked up one of these at a garage sale - haven't tried
it yet, but it does have a LW band.

thanks, john

You can get it for $14.04 from Buy.com. I did not check the shipping charges because they offer free shipping if you buy $25 worth of books. If you also order your 2006 WRTH from them at $17.79, you will qualify for the free shipping and pay about 10% less than amazon.com will charge.

John,

It's a generic term for a LF radio with a rotating antenna marked off
in degrees. It was an old boating radio navigational tool. The idea
was to find two or more known LF beacons, and by rotating the antenna
to null out the signals, you could determine your position.

That sort of system has been largely replaced by GPS, but they are
very sensitive LW receivers with good image rejection.

I don't have a Raytheon model...so can't tell you anything on those.

Jeff

Windsor. And I believe it is the current live show.

Actually, if you scan the MW dial it's usually pretty easy to find
five or six stations running Coast to Coast during its live time
slot. But as you say, in metro NYC, CKLW usually comes in best.

Now, I'm going to do a Cuhulin mindless ramble here.......
A neighbour appeared on my back doorstep one evening a year ago and started verbally abusing my wife for the interference to her television ever since we moved it. She was going to get someone to track it down, it had just started again a few minutes ago and it was ALL OUR FAULT!

I was still driving home at the time, my gear was off so it wasn't me. When I got home, I grabbed my trusty FT817 and started sniffing. Lots of crackling, arcing noises, peaking on high band VHF, but a problem all the way down to 80m and below. I had always considered it an arcing insulator and so I just lived with the problem.

I tracked the fault down to the streetlight in front of my house. It was arcing and flickering and there was a static crash every time. I wrote a love letter to the neighbour that I had tracked the noise down for her, and gave her the report number from the electricity company. The lamp and housing was replaced by noon the next day. Next evening at 7:10pm, the street lights came on and it was all quiet. Ahh bliss. All my low band problems solved. Her TVI problems solved.

Has the bitch said a word to me since? No.

Brad.

Probably a Jacob's ladder. I made one of these once using a big neon
sign transformer. The sixteen thousand volts would jump a half inch gab
at the bottom of the rabbit ear shape electrodes and then move up the
diverging wires because of hot air.

Coincidentally, that that was also the year I discovered radio interference

http://snipurl.com/iv98

==========
One of those old(bad) movies had a huge Jacob's Ladder inside a large
transparent (glass, I assume - Plexiglass wasn't around then) hollow
column resonant at 60 Hz. Unbelievable sound!

http://members.misty.com/don/jacobs.htm#jlnrb

Well, when your post started with:

"Now, I'm going to do a Cuhulin mindless ramble here......."

I automatically assumed you'd been keeping up on his voyeuristic
exploits. The ages 37 and 30 are those of his new female neighbours, who
Cuhulin seems to be monitoring twenty four hours a day. He knows their
every move and posts them here..in a mindless and rambling way, of course..

The inverter that powers the backlight on the display is the likely
culprit. It is kind of like the Horizontal output on a TV, nice saw
tooth wave with harmonics that reach well into the HF spectrum.

Just about every other clock inside the computer runs at frequencies
well above HF.

Yes, but that wasn't moonbounce, it was tropo scatter. YOu can only
use Moonbounce when the moon is visible to both ends. Troposcatter
works just about anytime, anywhere. The change in permittivity at the
top of the toposphere will actually bounce a tiny portion of the
microwave signal back down quite reliably. You can get about 600
miles that way. But you need the sort of big dish, and tens of
kilowatts to do it reliably. Only the military could really afford to
use it.

Whatever works on land will work on the ocean.
But you have to consider the antenna, and the ship
itself. Being the ship will be steel, I wouldn't expect to
get much down below deck, if you are surrounded by
steel. Will be dead...I imagine you will have to sit
up on deck to receive anything. But...Reception should
be good as long as you are exposed to the sky. Even a
portable whip should be ok, up on deck. Would be nice
if you could string a wire, or a whip, but I wouldn't count
on it. It will be up to the capt...Wouldn't hurt to ask though.
Never know..He might let you do it if it's easy and not a
hazard. I'd probably just take a short wire with the radio,
and clip the end to an umbrella or something... :/
I've never been on the ocean in a boat. But I did operate a
special events station on the Battleship Texas once about
20? years ago. We ran wire antennas between the different
structures of the ship. Had all bands , including 160m.
We had the radios/amps inside the combat information center,
which was about halfway up the bridge. It was pretty kewl. They
still had all the old WW2 radios, radar, etc. The radar screens
were mounting facing up, and were in wood cases..
It was in Dec, and I nearly froze to death on that thing the night
we stayed on it. The metal blocks the wind, but transmits cold
very well... But it was worth it. I got to look all around the ship
with no one with me. Some parts were blocked off, but I got to
see a lot of it. I still remember seeing the old doctors, and
operating room, and thinking it was a miracle anyone survived
that room...Really primitive compared to todays standards.
The radio room was blocked off. I could see in it a bit, but
couldn't go in. They have since overhauled the ship, and opened
the radio room I think. I think they even have a working ham station
in there now.

MK - After all this is a NewsGroup
and 'your' Opinion is Welcome :o) ~ RHF

"With my best Elvis impersonation"
Thank ya, vury vury much...

MK - Hey I guess you are right, 'we' should all
pack-up our long wire antennas and sell our radios.
Oops That's a - no, No. NO !

No. Nothing wrong with using any type of antenna.
What is getting you into trouble is applying the technique
used with one particular type of antenna, and imply that it
applies to all. And also you are giving credit to the wrong thing
that improves the antenna you are using. It ain't the ground
in itself, or the transformer, which is almost never actually
needed. It's the decoupling of the feedline. The only reason
ground is mentioned is cuz it's the method used to help
decouple the feedline.
But still in the big picture, the random is fairly lame vs other
choices. It's just how far you want to go with it. If I had to
transmit using random wires, "which I have tried", I would
be miserable. Poor overall performance in general, and a
nightmare as far as rf problems in the shack, etc. Being I
already have full size dipoles for most of the HF bands, it
would be silly for me to use random wires for SWL.
And once you compare the two types, it's not too likely you
would want to use the random wire if you have room for
dipoles. I've also used full size HF ground planes. I often
run one for 40m, 36 ft at the base on a mast. The antenna is
nearly 70 ft tall. It is killer for long haul on the lower -mid HF
bands
late at night. On a path to Australia, that GP would beat my
dipole at 36 ft by appx 4 s units. Using that ground plane, and
1 KW of power I would always be over S 9 in Australia. Once got
a report of 20 db over 9 in Tokyo. That antenna browns the food.
And my dipole would probably beat the average random wire
by 4 s units. Then on the upper HF bands, I have a yagi.
Will hear stuff that wouldn't exist on many random wires due to
the forward gain, and f/b ratio. And it's steerable from the shack.
Use a random wire instead? Thanks, but no thanks.. :/
But I realize, not everyone is me... BTW, a random wire must be
at least one wavelength long on the band in use to qualify as a
"long wire". Pretty easy on the upper bands, but will need a pretty

long wire on the low bands. IE: 4 mhz will need appx 230-240 ft...

> bitrate audio, and quite different from AM on shortwave.

Well, Tom that's your opinion. I'm not exaggerating when I say it
sounds terrible. I find the aural artifacts very annoying and I
certainly would not choose to listen to it. This is no different than
looking at a photograph. At low resolution you can easily identify all
the objects in the picture but edges look jagged and small details are
lost. DRM is similar where you can understand all the speech but it is
distorted and small dynamic components are missing. Low bit rate is
something that can not sound "good." If you are going to digitize
anything you need a high bit rate for it to sound "natural" or "good"
or "hi fidelity" or whatever term you want to use to depict quality.

The hyperbole to watch out for comes from the consortium where the
claim is DRM SW sounds like FM broadcast. That will only happen in
their dreams.

Basically DRM SW sounds like any digital streaming low bit rate audio
you can find in numerous places on the Internet.

The USS Liberty is said to have had moonbounce capability. The moonbounce
antenna is supposed to have been one of the distinctions seperating it from
the Egyptian ship the Isrealis said they thought they were attacking.

The large parabolic antenna in the picture, pointing straight up, seems to
be that moonbounce antenna.

A magnetic ballast lamp puts out hash. A modern compact fluorescent
operates very quietly except for one discreet band where there is some
potential for interference. Not nearly as much of a problem as light
dimmers at the neighbors.

MK- Please elaborate. I am under the impression that:

1. A random-length "inverted L" wire antenna with coax lead-in is a good
choice for a simple, effective receive antenna for 1.8 to 30mHz listening.

2. That the matching transformer, with proper ground, is a simple,
practical, easy way to mitigate extraneous RF noise.

Is there a better single antenna that covers the HF spectrum? And what are
other ways to decouple the feedline?

Thanks,

Greg

3581. Battery charger question

Newsgroup: rec.radio.shortwave
Date: 2005-10-23 15:07:17 UTC
From: homepc <wiebe08@hotmail.com>
Message-ID: <KGN6f.3677$lb7.44236@news1.mts.net>
Source record: 45840

Hi

I have both Degen DE1103 and DE1107 radios, and I'm looking for a safe inexpensive AA battery charger.

I was checking Bestbuy in Canada and found the Energizer CHM4FC NIMH RC model. Is this an OK battery charger? I looked at the Powerex 402 & 401 models, but they seem to be higher end chargers geared for digital camera use and a little too expensive.

Any suggestions?

Thanks

Yes. The phrase "There but for the grace of God, go I" can be used
properly in so few situations that it's a welcome opportunity.

The problem is the quality of the comparison...when Cuhulin is a
creature pretending to be a fifteen year old girl with a sexual interest
in male dogs, his status is immediately moved next to that of a Bubonic
plague carrying sewer rat.

Even the rat hates that. It has feelings and naturally, NEVER cross dresses.

The 1103 has a built-in charger. I use the $10 Energizer charger for
my old camera AAs and it works just fine.

Wrong again. Batteries have been found predating that.Egypt may have had
them a lot earlier. As far as I can tell, batteries were first used for
electroplating. The jewelers were plating cheap metals to look like
gold. It was an easy way to defraud the wealthy.

This is a later example. It may not have survived the Neocon
bombing/looting.

Dear WRMI Clients:

Here we go again. This time South Florida is being threatened by Hurricane
Wilma. It is expected to be a category two hurricane when it arrives in South Florida. The latest reports indicate that conditions are going to deteriorate
quickly around midnight tonight (Sunday), and will probably remain bad until
Monday afternoon. Miami is basically going to shut down on Monday, and people
are advised not to go out after late this evening.

The winds will certainly be high enough to potentially affect our antennas, not to mention the flooding and probable power outages. Because of these reasons,
and the safety of our transmitter site operators, we have decided to shut down our transmissions as of midnight tonight (Sunday) until Wilma passes through.

At the moment, we are tentatively planning to resume broadcasts as of about
5:00 pm Eastern Time on Monday, assuming there is no damage and that we have
electricity. However, we could be back on the air earlier or later, depending on conditions (Jeff White, WRMI, Oct 23, DX LISTENING DIGEST, Glenn Hauser)

No, the article specifically stated that it was moonbounce and gave a
DOD rig designation, along with a remark that it was unreliable and a pain
to keep running, especially as they had a limited schedule for contact.
(For the radio intelligence ships, the goal would be to get their
intercepts to NSA headquarters at Fort Detrick in Maryland with as few
intermediaries as possilble).

Somewhere else, Monitoring Times I think, there was a description of
a Washington, DC <-> Pearl Harbor moonbounce link, so it got used
for fixed point connections, too. Given the expense, this sort of
stuff was probably only used by the highest priority traffic in the
DOD teletype network (AUTODIN?). Encrypted up the yazoo and anybody
who knew about it had their lips sewn shut.

3634. Re: Better Signal-to-Noise Ratio from a Combination of Improvements including . . . a Ground

Newsgroup: rec.radio.shortwave
Date: 2005-10-23 19:19:53 UTC
From: nm5k@wt.net
Message-ID: <1130095193.573908.242560@g43g2000cwa.googlegroups.com>
Source record: 45995

MK- Please elaborate. I am under the impression that:

1. A random-length "inverted L" wire antenna with coax lead-in is a good
choice for a simple, effective receive antenna for 1.8 to 30mHz
listening.

It's ok for general use. I'm not against random wires. Just RHF's description of why or how they work...

2. That the matching transformer, with proper ground, is a simple, practical, easy way to mitigate extraneous RF noise.

The matching transformer has nothing to do with it. The ground is used as a method to help decouple the feedline. It's the decoupling of the line that mitigates common mode currents. All the matching transformer does is change impedance. But impedance/ SWR, etc, have *nothing* at all to do with common mode currents flowing on the shield. Nada. Zilch. The only reason people use the transformer is to provide a better transfer of power. But it's almost always overkill.
The use of one can pump up the S meter, but it rarely improves the s/n ratio. In some cases, the transformer can actually degrade the signal if the original match was better than the new one.

Is there a better single antenna that covers the HF spectrum? And what are
other ways to decouple the feedline?

Dunno. Just depends on the needs, path, time of day, freq, etc, etc.
No one antenna is best for everything. Thats why I have several.
For general multiband use, I like paralleled dipoles fed with a single coax.
A 1:1 balun or a coax choke at the feedpoint is used to decouple the line.
Some like a dipole fed with ladder line and tuner. The dipole would be cut for the lowest band to be used.
Some like a large loop fed in the same manner. There are a zillion antennas that can be used. It depends on the antenna, etc, but with most
systems, baluns or chokes are the most common decoupling devices.
With elevated ground planes, the radials help decouple the line, and extra "decoupling radials, cones, sleeves, etc can be used.
With the random wires, grounding the shield, or chokes are commonly used. But the use of ground as a decoupling aid is only used on

incomplete antennas like coax fed random wires, ground mount verticals,

etc.. You won't see that used on many "complete" antenna systems.

>

When the above section from Mein Kampf is quoted OUT OF CONTEXT, as David did, it leaves the impression that Hitler actually invented and promoted the BIG LIE concept. As the following IN CONTEXT Mein Kampf quote shows, Hitler is merely explaining WHO started the BIG LIE and why they use it:

(My Mein Kampf version appears to be a different translation, but you'll get the point):

"This most of all shows the assertion that the lost War was the cause of the German collapse to be a lie. No, this military collapse was itself only the consequence of a large number of symptoms of disease and their causes, which even in peacetime were with the German nation.

This was the first consequence, catastrophic and visible to all, of an ethical and moral poisoning, of a diminution in the instinct of self-preservation and its
preconditions, which for many years had begun to undermine the foundations of the people and the Reich.

It required the whole bottomless falsehood of the Jews and their Marxist fighting organization to lay the blame for the collapse on that very man who alone, with superhuman energy and will power, tried to prevent the catastrophe he foresaw and save the nation from its time of deepest humiliation and disgrace By branding Ludendorff as guilty for the loss of the World War they took the weapon of moral right from the one dangerous accuser who could have risen against the traitors to the fatherland. In this they proceeded on the sound principle that the magnitude of a lie always contains a certain factor of credibility, since the great masses of the people in the very bottom of their hearts tend to be corrupted rather than consciously and purposely evil, and that, therefore, in view of the primitive simplicity of their minds they more easily fall a victim to a big lie than to a little one, since they themselves lie in little things, but would be ashamed of lies that were too big. Such a falsehood will never enter their heads and they will not be able to believe in the possibility of such monstrous effrontery and infamous misrepresentation in others; yes, even when enlightened on the subject, they will long doubt and waver, and continue to accept at least one of these causes as true. Therefore, something of even the most insolent lie will always remain and stick-a fact which all the great lie-virtuosi and lying-clubs in this world know only too well and also make the most treacherous use of.

The foremost connoisseurs of this truth regarding the possibilities in the use of falsehood and slander have always been the Jews; for after all, their whole existence is based on one single great lie, to wit, that they are a religious community while actually they are a race-and what a race ! One of the greatest minds of humanity has nailed them forever as such in an eternally correct phrase of fundamental truth: he called them 'the great masters of the lie.' And anyone who does not recognize this or does not want to believe it will never in this world be able to help the truth to victory."

When viewed in context, you can clearly see that Hitler credits the Jews for creating the BIG LIE, and that he is actually condemning it. For years and years, Jews and their non-Jewish left-wing liberal "useful idiots" have claimed that Hitler invented the Big Lie, when all along their claim in itself is a BIG LIE!

It looks to me that Hitler was absolutely right, even prophetic, in this matter! Considering the large Jewish influence in most TV networks, news broadcasts, newspapers, publishing, movies, etc., it would seem that a healthy dose of skepticism should be applied against what you see and hear from the media. Chances are, they are telling us

many BIG LIES.

Get a MAHA C410FS, it will charge 4 at a time, each cell is charged
individually. You can charge only one cell or up to 4.

Thomas Distributing has them on the web, great prices.

The Hurricane Watch Net is up and running with K5SIV doing net control from Austin, TX, on 14.325 mHz. Signal is real strong here in Lakeland, FL, since he is beaming this way, of course. My county, Polk, is currently under tornado warning as the first bands from Wilma come across the state and a tornado was spotte to the south, moving this way. Our area is also under tropical storm warning, expecting trop storm force winds and rain as Wilma approaches, makes landfall to the south, and crosses the state tomorrow. The next 24 hrs. is going to be lively around here.

Piece of fine sandpaper or emery board. Rub the contacts / springs until they shine again. Many instances the corrosion is so bad it ruins the conductivity of the contact for good and the contact will appear black after sanding. In that case you can have a go at replacing the contacts or doing some soldering and running the battery wires direct to the batteries. I've always got radios working on batteries again no matter how bad the corrosion. Don't know how many expensive radios I've picked up at thrift stores for a few bucks with their only problem being ruined contacts.

The greenish stuff is likely copper suplhate - it's called
"verdegris". The post from hpredocks gave good advice, but to answer
your question directly, yes, there is an electrical contact cleaner
spray - it's basically methyl alcohol and envorinmentally safe freons.
CRC is one of the most common brands, and available at most large
retailers, and auto supply stores. Radio Shack sells their own brand,
and while it's the same thing, it's more expensive (suprise, suprise).

Tony

3659. OT: 35 mm film Q

Newsgroup: rec.radio.shortwave
Date: 2005-10-23 23:40:26 UTC
From: Sanjaya <sanjaya_49@yahooNOSPAM.com>
Message-ID: <KbV6f.18333$vw6.271@newsread1.news.atl.earthlink.net>
Source record: 45770

I'm asking here because I know you guys and trust your opinions.

I want to stock up on some Kodak Plus Digital 35 mm film at a good price.
eBay has quite a few auctions for multi-roll package deals, but the "develop before" dates are all May, June, July 2006.

If I get the film but don't use all of it by the date of "expiration" will it still be good?
Will keeping it in the refrigerator prolong the lifespan?

Thanks for any feedback.

Also, apologies for the OT post... but like I said... I trust your opinions... it's like asking my friends.

Thanks. Unfortunately, 20 meters is not good here at night. I can hear
net control but nobody else. Are there any 75 meter hurricane nets
tonight? I'm tuning around, but no luck so far.

Figure about 4 years beyond the expiration date for film kept in the
Fridge - maybe a little longer or shorter depending how quickly it gets
into the fridge.

The insane power-hungry bureaucratic twats.
« Thread Started on Yesterday at 8:34am »

http://www.aussieseek.com

While I was in Melbourne last week, I saw a tv programme showing
how City Councils are insane power-hungry bureaucratic twats.

This guy grows fruit and vegetables. He has a stall at their
front gate where they give away fruit and veges to his neighbours
on a regular basis. They have been doing it for donkeys years.

Anyway, the Council says he is breaking the law. He must apply
for a permit at a $50 cost *every time* he runs his stall. So if
he sets it up every day that will cost him $350 a week to give
away free fruit and veges.

The Cou8ncil guy said "We have no problems with what he is doing
in principle, but he must have a permit. He is breaking the law
without it. That's what concerns us, he *must* have a permit."

How fucked is that? Do some kindness for your fellows and the
Council will require you have the correct permit to do so and
charge you heaps for it too.

It's coming here soon too.

That's socialism for you.

Has anyone read Bob Jones' 'The Permit'?

That's wat happens when a few little officious nobodies give themselves
a little power - it quickly goes to their little heads and clouds their
judgement and logic.

The more they get -the more they want - of everything.

How to deal with dam bureaucrats ?
Just for a bit of a lighter mood...This has been circulating for years,
but it's still great This has actually circulated a LOT and got a lot
of attention; maybe this tactic can be employed more often by
activists?

The bureaucrat's letter:

Quote
STATE OF MICHIGAN

Reply to: GRAND RAPIDS DISTRICT OFFICE STATE OFFICE BUILDING 6TH FLOOR
350 OTTAWA NW GRAND RAPIDS MI 49503-2341
JOHN ENGLER, Governor
DEPARTMENT OF ENVIRONMENTAL QUALITY
HOLLISTER BUILDING, PO BOX 30473, LANSING MI 48909-7973
INTERNET: http://www.deq.state.mi
RUSSELL J. HARDING, Director

December 17, 1997

CERTIFIED

Mr. Ryan DeVries 2088 Dagget Pierson, MI 49339

Dear Mr. DeVries:

SUBJECT: DEQ File No. 97-59-0023-1 T11N, R10W, Sec. 20, Montcalm County

It has come to the attention of the Department of Environmental Quality that there has been recent unauthorized activity on the above referenced parcel of property. You have been certified as the legal landowner and/or contractor who did the following unauthorized activity:

Construction and maintenance of two wood debris dams across the outlet stream of Spring Pond. A permit must be issued prior to the start of this type of activity. A review of the Department's files show that no permits have been issued.

Therefore, the Department has determined that this activity is in violation of Part 301, Inland Lakes and Streams, of the Natural Resource and Environmental Protection Act, Act 451 of the Public Acts of 1994, being sections 324.30101 to 324.30113 of the Michigan Compiled Laws annotated. The Department has been informed that one or both of the dams partially failed during a recent rain event, causing debris dams and flooding at downstream locations. We find that dams of this nature are inherently hazardous and cannot be permitted. The Department therefore orders you to cease and desist all unauthorized activities at this location, and to restore the stream to a free-flow condition by removing all wood and brush forming the dams from the strewn channel. All restoration work shall be completed no later than January 31, 1998. Please notify this office when the restoration has been completed so that a follow-up site inspection may be scheduled by our staff. Failure to comply with this request, or any further unauthorized activity on the site, may result in this case being referred for elevated enforcement action. We anticipate and would appreciate your full cooperation in this matter.

Please feel free to contact me at this office if you have any questions.

Sincerely,

David L. Price
District Representative Land and Water Management Division

The Reply:

Quote
Dear Mr. Price:

Re: DEQ File No. 97-59-0023; T11N, R10W, Sec 20; Montcalm County

Your certified letter dated 12/17/97 has been handed to me to respond to. You sent out a great deal of carbon copies to a lot of people, but you neglected to include their addresses. You will, therefore, have to send them a copy of my response.

First of all, Mr. Ryan DeVries is not the legal landowner and/or contractor at 2088 Dagget, Pierson, Michigan - I am the legal owner and a couple of beavers are in the (State unauthorized) process of constructing and maintaining two wood "debris" dams across the outlet

stream of my Spring Pond. While I did not pay for, nor authorize, their dam project, I think they would be highly offended you call their skillful use of natural building materials "debris." I would like to challenge you to attempt to emulate their dam project any dam time and/or any dam place you choose. I believe I can safely state there is no dam way you could ever match their dam skills, their dam resourcefulness, their dam ingenuity, their dam persistence, their dam determination and/or their dam work ethic.

As to your dam request the beavers first must fill out a dam permit prior to the start of this type of dam activity, my first dam question to you is: are you trying to discriminate against my Spring Pond Beavers or do you require all dam beavers throughout this State to conform to said dam request? If you are not discriminating against these particular beavers, please send me completed copies of all those other applicable beaver dam permits. Perhaps we will see if there really is a dam violation of Part 301, Inland Lakes and Streams, of the Natural Resource and Environmental Protection Act, Act 451 of the Public Acts of 1994, being sections 324.30101 to 324.30113 of the Michigan Compiled Laws annotated.

My first concern is - aren't the dam beavers entitled to dam legal representation? The Spring Pond Beavers are financially destitute and are unable to pay for said dam representation - so the State will have to provide them with a dam lawyer. The Department's dam concern that either one or both of the dams failed during a recent rain event causing dam flooding is proof we should leave the dam Spring Pond Beavers alone rather than harassing them and calling them dam names. If you want the dam stream "restored" to a dam free-flow condition - contact the dam beavers - but if you are going to arrest them (they obviously did not pay any dam attention to your dam letter-being unable to read English) - be sure you read them their dam Miranda rights first.

As for me, I am not going to cause more dam flooding or dam debris jams by interfering with these dam builders. If you want to hurt these dam beavers - be aware I am sending a copy of your dam letter and this response to PETA. If your dam Department seriously finds all dams of this nature inherently hazardous and truly will not permit their existence in this dam State - I seriously hope you are not selectively enforcing this dam policy, or once again both I and the Spring Pond Beavers will scream prejudice!

In my humble opinion, the Spring Pond Beavers have a right to build their dam unauthorized dams as long as the sky is blue, the grass is green, and water flows downstream. They have more dam right than I to live and enjoy Spring Pond. So, as far as I and the beavers are concerned, this dam case can be referred for more dam elevated enforcement action now. Why wait until 1/31/98? The Spring Pond Beavers may be under the dam ice then, and there will be no dam way for you or your dam staff to contact/harass them then. In conclusion, I would like

to bring to your attention a real environmental quality (health) problem: bears are actually defecating in our woods. I definitely believe you should be persecuting the defecating bears and leave the dam beavers alone. If you are going to investigate the beaver dam, watch your step! (The bears are not careful where they dump!) Being unable to comply with your dam request, and being unable to contact you on your dam answering machine, I am sending this response to your dam office.

Sincerely,
Stephen L. Tvedten

You will love to listen to him. He acts as a mediator trying to solve problems between people and common issue in society. Yet he does the voices of the same people he is talking to. His show is one of the funniest & extreme.

I first learn about him about 3 years ago when living in Tampa, Fl. I picked him on WFLN.

He once did a show on a man who prayed to Ahla with his fat ass up in the air in the streets. And people complained about it. Yet the man felt that not only had a right to do this, but that his fat ass up in the air was a compliment. And the fact that people did not like him was an insult to him. Furthermore he felt proud and special because of doing this.

Give The Phil Henry Show a try!

Try Dexoit.I have never tried it out before,but next time I am at a
Radio Shack store or auto parts store,I am going to look for a spray can
of Dexoit.There is an advertisement in my Popular Mechanics magazine
November 2005 issue about Dexoit.

Having it pointed straight up is the standard stowed position. At lot
less load on the mounting that way. However it could just as easily be
a tropo scatter antenna, and tropo scatter has the advantage that the
moon doesn't have to visible at both ends of the path.

however it could also have used a communication satellite. I think only Syncom III was in Geo Syncrhonos orbit at that time, however there were a number of other sats in LEO and MEO (such as Telstar) that could have been used, and they would come into view every few hours and would be usable for 15-30 minutes at a time with a usable bandwidht of a few MHZ. The Syncom III video wasn't so great, since it was a 2 Mhz transponder IIRC, and analog Television is 6Mhz.

. The first Telstar went up in 1962, and I would be indeed surprised is several Military sats didn't have similar capabilities at that time. In the fall of 1967 I remember a professor of Meteoroloby at the University of Wisconsin telling me about a single UHF transponder they had put on one of the Tiros weather sats in orbit that could be used (and was used as a voice channel). The roof of the Meteorology department at UW had a modest steerable corner reflector to use it.. As it was in LEO, it only took about 50 watts on each end.

>Will keeping it in the refrigerator prolong the lifespan?
Certainly will, the problem is the process for developing can go away.
In the late 1960's, You could buy Kodak Infra-Red Ektachrome. The bind
was it used the E2 process, which was no longer in use commercially,
so finding someone to process the stuff was nightmare (fortunately
there were still a few 'Professional' products that used E2, So E2
chemistry was still avaliable, and a few customs labs would do it,
but current Ektachrome process for consumer products at the time was
E4 (which got rid of the reversal exposure). My father got into that
bind with Kodachrome in the 1960's. They went from Kodachrome to
Kodachrome II to Kodachrome 25. If you need to get the original
Kodachrome processed in the late 1960's, you were SOL.

For Kodachrome, the chemistry was never available to the public.
Kodachrome is based on a technology that is now 70+ years old. (I've
seen pre-WWII Kodachrome movies).

The rate of 'deterioration' of the emulsion goes down about 50% for
each 10C reduction in storage temperature. So if it was designed to
last for 2 years at 25C (77F), it is 4 years at 15C, 8 years at 5C, 16
years at -5C, 32 years at -15C (typical of a freezer).

If you want to freeze it, just make sure it is packaged in an air
tight container, and don't remove it from the container until it has
been out of the freezer for several hours. Otherwise you get
condensation, and the backing can be brittle enough that is tears when
you try to load it into the camera.

I have 4 Degen rechargeable batteries that came with the DE1103.

I borrowed my son's Sanyo quick charger and found the batteries got very hot. I'm worried about killing these batteries with a cheap charger. I've read that charging the batteries within the radio isn't a good idea as it could damage the radio if the batteries leak. Also, if the batteries charge too slowly, crystals will form in the batteries and shorten their service life.

They did not forbid him to give food away, though they did have a
pretty hefty licensing fee.

Wouldn't a moonbounce setup, with high power and a steerable antenna, also have tropo scatter capability? It wouldn't necessarly go the other way, however. Equipment which works well enough for tropo scatter might not do the moonbounce job.

Again, what works for moonbounce ought to more than meet the standard for satellite work.

The Liberty was said to have had moonbounce capability. I'd figure they used that large parabolic antenna for that purpose. There's no obvious reason they couldn't have used it for the less demanding tasks of tropo scatter and satellite comms.

Back in the 60s or so, there was a TV program where a panel
was supposed to guess a guest's secret. For one guest, they said that
there was a special condition -- the guest's answer to a question
would be delayed a number of seconds. The secret was that the answer
was being moon-bounced.

Reading closely, you would see that there was no implication
in the previous posting that the antenna was actively in use. Yes, it
may have been parked, under maintenance or so positioned for any
number of other reasons.

Nothing at all wrong with white pride, or black pride, red pride, yellow pride. Only when it gets to the point of advocating violence does it become a bad thing.

And yes, freedom of speech IS a wonderful thing. And belongs to everyone, whether we agree with them or not.

Take care. :)

Beccause the lamer who wrote that wasn't paying attention in
physics class. He even thinksthe cooling effect of water on a fire is
a "chemical reaction" that interferes with the oxygen feed. Sheesh.

Granted that can happen if you use a fog applicator to put out
a fire in a tank with a relatively small opening, but it's not a
general case.

3725. Shipping Concerns

I shipped my Grundig SAT 800 to Drake for updates. I double boxed it with plenty of packing. When I got it back it came with only the original Grundig box and packing. I'm thinking of selling my 800 and am concerned with shipping it the same as I got it from Drake. I am just wondering if UPS or FEDEX wrecks the radio if I could have insurance problems paying off for inadequate packing. I think Drake would know how to ship expensive radios but it sure doesn't seem like enough packing to me. Should I be concerned? Should I go to the trouble to double box it again? I don't understand why Drake would not pack it as well as when I shipped it to them. I don't have the extra packing material so I would have to get it. I don't have the extra box nor packing since I sent it to Drake.

In general, original packing should be adequate to insure safe arrival under
normal shipping conditions, that's what it's designed for. However,
whenever I ship anything that costs more than $100, I will always pack it in
at least one more box in bubble wrap.. it's worth it for the peace of mind.

Curiosity.. how much you thinking of selling the 800 for?

I have a tuning knob ordered from Mike Maghakian. I'll probably play with it
a bit before I sell it. Max would probably be $350 shipped and insured
without the headphones. I love the size of the radio but I just don't have
room for it. I may pick up an R75. I bought it new from Universal this year.
I have the receipt. Heck I might even do some trading.

I have a few pictures and slides I took with my Canon camera when I was in Vietnam in 1964.(somebody stold my Canon camera and most of my pictures before I left Vietnam) I was wondering if a local Wal Mart store can make some duplicates of my pictures and enlarge the slides and make pictures of them for me? I want to snail mail the duplicates to a woman in England.I am sure one of the camera stores around here such as Deville Camera can make some duplicates for me,there are two Wal Mart stores in my area,one of them is a mile and a half South of me and the other one is about five miles West of me.I was thinking it might be cheaper to get my pictures duplicated at a Wal Mart store.

>hot. I'm worried about killing these batteries with a cheap charger.

Sanyo doesn't make "cheap" quick chargers. It is normal for NiMh
cells to get warm during charge (exothermic chemistry) and get
quite warm during a quick one hour or less charge. The quick
chargers all have voltage, and some also, temperature, sensing
circuits to stop the charge to prevent overcharging.

However, for maximum cell cycle life the cells should stay as
close to normal room temperature as possible. For that, a 2-4
hour smart charger is just the ticket. My current favorite is the
compact Sanyo NC-MQR03 but the Powerex models you mentioned are
also fine.

> I've
>read that charging the batteries within the radio isn't a good idea as it
>could damage the radio if the batteries leak.

Don't know what the charging control circuit is in the radio but
it's probably just a simple low constant current overnight charge
and that won't cause leakage unless non- rechargeable cells are
inserted. The manual should give the cell capacities it is
designed for? On the other hand, the cells may not be fully
charged or overcharged so I agree, it's prudent to use a good
external charger.

> Also, if the batteries charge
>too slowly, crystals will form in the batteries and shorten their service
>life.
>
>
Believe this what you mentioned in your original post:
http://data.energizer.com/PDFs/chm4fc.pdf

The trickle charge rates shown are okay once the faster rate full
charge is finished. However, NiMh and NiCads should not be
trickle charged from a fully discharged state as that does cause
dendrites, to form unless the cells are immediately discharged
again.

This also appears to be a simple timed constant current charger so it will properly charge cells only if they were fully discharged (<1V per cell), and if they are the right nominal capacity -- but the manual does not state what that is. The box might give the cell capacities.

From the AA charge current in the manual it seems the NiMh charge is 420mA for 5 hours then going to a trickle (maintenance) 20mA charge. I f so 1400mAh cells will fully charged and not be overcharged even during continous trickle charging.

More than 1400mAh cells will be undercharged (to only about 1400mAh) but that is not a problem for MiNh chemistry and will actually result in very long cell cyclel life. Less than 1400mAh cells will be overcharged and that ruins the cells i.e, less cycles.

Standard 600-700mAh NiCad AAs will be correctly charged and the inexpensive NiMh 2500-3000mAh C and Ds will fully charged.
The key to this kind of charger is fully discharge the cells and use the right capacity cells for it. Then, it is perfectly fine.

Far too many on both sides of the political spectrum believe that freedom of speech is only applicable to those who agree with them. Even those people have the right to speak their minds.

Fascistas, television, or electronic confusion aside, the definition of
anarchy does not apply to current government.

Anarchy is basically defined as a LACK of law or government. The old west
before government and law enforcement came in was essentially an anarchic
state, where rights were defined by gunfire or fistfights.

Double boxing in a haphazared manner is not as good as packing it with proper packing material in a single box. Generally, the original box and packing is designed to transfer the stress to the item shipped without damage.

I have received packages that were double boxed, but the packing material was simply foam pellets with very little spacing. Foam pellets can shift, or the box can be torn with damange to the contents.

Rigid foam that is form fitted is excellent. Damage is often the result of mass times acceleration. What packing tries to accomplish is reduce acceleration - or decelleration.

An SB-220 wrapped in a pair of old pants, or a Johnson Ranger in a grapefruit box and a banana box with no packing material is not adequate.

According to the usslibertyinquiry.com website (which has been off-line lately), the Liberty did have moonbounce (aka: TRSSCOM) capablity. The system consisted of an S band transmitter and receiver, and 16' parabolic reflector antenna. The antenna was steerable. Also on Liberty was a 10' parabolic antenna, on the forecastle. This was used for satellite "communications research" and other SHF intercept work -- part of the SRR-20 multichannel receiver and recording system.

There is a bunch of reference information on the usslibertyinquiry.com forum about Liberty's intercept and communications systems. But for the past month the site has been down for maintenance. So, I'm unable to point you to the place where I got the above info.

Caig DeOxit, spray or liquid concentrate. Followed by Preservit (sp?).
Check the Caig Labs web site.

Go to groups.google.com and read the archive for rec.radio.shortwave.
Search for threads with 'DRM' in the title.

For North America, Radio Canada International runs a DRM transmission
out of Sackville. As I remember, it's on 9800 kHz from about 22:00
to 03:00 UTC. There's a bunch more in Europe.

Sounds like a 10 kHz wide multiplex RTTY signal. (A whole bunch of
narrow spaced carriers phase or frequency modulated).

http://www.landoverbaptist.org/news1001/viciousgodquiz.html

The American term ' Skunk ' comes to mind ' Albert '.
Oh, and what a stinker you are!

The Baptist church has helped many millions of people through life's adversities; kept people together as families, rather than splinter into forlorn supplicants to Family Courts, the wonderful answer of the legal fraternity.

In some of the Southern States of America, there are churches where you

can handle poisonous snakes and prove your faith. Snakes can be quite sensitive and discerning in whom they put their trust.

I even know a bloke who fed a recently caught brown snake, with a couple of field mice, to the astonishment of his friends. The snake then came straight for my friend, and climbed up his leg, and rose to the level of his face, licking the air with it's tongue; then rubbed the back of it's head over the heart of my mate, slid down his leg, and

slowly wound it's way off..

Maybe those simple folk in the South of the US of A, had a good way of keeping the real snake out of their faithful congregations.

However, the kind and forbearing moderator of this board, lets em in..that leaves me the chance of steppin on em before they inject their

poison.

Double boxing is overkill IF you pack it correctly in a single-sided
box. The same effect of another box and 2 inches of foam could could
be gotten with a larger single box. Some people feel more comfortable
knowing their new purchase is coming inside 2 boxes, but I think the
comfort is largely illusory.

If you wrap that radio in bubble wrap and fill in with 3 inches of foam
peanuts it will take a lot to damage that relatively light radio.

3798. 7.415 Financial Survival 2000 / Jeff Gannon:

Newsgroup: rec.radio.shortwave
Date: 2005-10-24 20:30:46 UTC
From: barnegatdx@aol.com
Message-ID: <1130185846.107579.195500@f14g2000cwb.googlegroups.com>
Source record: 46056

Rumored Gannon has been given immunity from Treason charges in exchange
for information..

http://rawstory.com/news/2005/Salon_Could_Gannon_be_charged_under_1008.html

Jeff Gannon, the prostitute-cum-Talon News "reporter" who lobbed
softball questions
at President Bush last year before he was uncovered by bloggers, could
be charged in
connection with the CIA outing case. Conason writes:
#

Another intriguing possibility in the leaks case brings back the
baroque personality of right-wing
pressroom denizen Jeff Gannon, born James Guckert.

The New York Times reported Friday that in addition to possible charges
directly

involving the revelation of Valerie Wilson's identity and related
perjury or conspiracy charges,

Fitzgerald is exploring other possible crimes. Specifically, according
to the Times, the special

counsel is seeking to determine whether anyone transmitted classified
material or information to

persons who were not cleared to receive it -- which could be a felony
under the 1917 Espionage Act.

One such classified item might be the still-classified State Department
document,

written by an official of State's Bureau of Intelligence and Research,
concerning

the CIA's decision to send former ambassador Joseph Wilson to look into
allegations

that Iraq had tried to purchase uranium from Niger. Someone leaked that
INR document

-- which inaccurately indicated that Wilson's assignment was the
result of lobbying

within CIA by his wife, Valerie -- to right-wing media outlets, notably
including Gannon's

former employers at Talon News.

On Oct. 28, 2003, Gannon posted an interview with

Joseph Wilson on the Talon Web site, in which he posed the following question

: "An internal government memo prepared by U.S. intelligence personnel details a meeting

in early 2002 where your wife, a member of the agency for clandestine service working on
Iraqi weapons issues,
suggested that you could be sent to investigate the reports. Do you dispute that?"

Those antennas seem to be for house-mounting desktop radios. I am interested in one of those hand-sized portable radio. It would be difficult to walk around with the hand scanner if there is an umbrella like contraption attached to it.

P.S. the Sony ICF-7600GR will come in a few weeks from amazon.com. It takes that long when you select the "free shipping" option. Since I am new to this, I wasn't wise enough to make a purchase through an outfit that actually supports this hobby. In the future, I will.

I'm sure the closest Walmart can tell you, if you call and ask.
You're right about the price... if Walmart can do it they will surely be less expensive
than
a camera store. I once had a camera store guy tell me they would scan a picture for me...
only $20.

You may want a couple black ''clip leads'' (those wires with alligator
clips on the end). My walkaround radio (Sangean ATS-606A) is
adequately sensitive with its built-in whip antenna. In a hotel room,
I might use the alligator clips to double the antenna length. Too
much antenna and you'll force the RF circuits off the linear portions
of their curves.

3811. Re: Shipping Concerns

Newsgroup: rec.radio.shortwave
Date: 2005-10-24 23:35:15 UTC
From: Charlie <no@spam.please>
Message-ID: <PM6dnS6fCs4l8sDeRVn-uA@comcast.com>
Source record: 46069
Cross-posted to: rec.radio.shortwave,rec.radio.swap

I've resisted jumping into these conversations about shipping, but since I own an independent "pack & ship" store, have three AMPC certifications in packing and shipping in the small parcel environment and I'm a ham, I thought it was time for a comment or two.

Here are a few facts that should influence how you think about packaging:

1) A corrugated cardboard box loses 60% of its strength after one shipment. For that reason, I almost never ship in a used box, unless the contents are something like used clothing where strength is less important.

2) The original packaging - especially the styrofoam - is generally optimized for the particular item. It's good to reuse, but special attention must be given to the box. Many items are shipped on pallets. The corrugated boxes used to do so are much less strong that those used for the small parcel (FedEx, UPS, DHL, USPS) environment. In these cases, I will used the optimized styrofoam, but will double-box.

3) Not all packaging materials are created equal. In general, air cushioning works well (bubble wrap, pillow pads), but other times foam is better. Polystyrene is different than styrofoam. The primary factors are flex (the ability to absorb impact) and resilience (the ability to return to shape after impact). Foam-in-place is used in some applications, but it has poor resilience. For this reason, I don't use it in my store.

4) The small parcel environment is largely automated these days. Items are barcoded early on in their travels. These barcodes are used to determine the routing of the parcel. Parcels are generally routed to a sorting center where they are dumped into a chute and on to conveyor belts. Sorting equipment scans the barcodes and decides which is the next belt is should be shifted to . Shifting from one belt to another is accomplished by means of a steel plate that "shoves" (and not so gently) the parcel to its next belt.

5) For items of average fragility, the accepted standard is that the item should have at least 2 inches of padding on all sides. The padding used must take into account the weight of the item and the cushioning curve of the packaging materials (a little too much to delve into here).
For a ham radio, I would package it by double boxing it. At least 3 inches of padding on the inside box and at least 2 inches between boxes.

6) As a rule of thumb, I package every item so that it can survive a drop from 4 feet onto a hard floor.

7) Some items are simply not acceptable for the small parcel environment because of their size, weight and/or fragility. These items are more suitable for crating and shipping via truck or a blanket-wrap service.

As far as carriers, I'll share my experience. The store I own is independent, so I use all carriers. I have no particular axe to grind. These are my own opinions derived from my own experience:

UPS: Good reliability, but a well-earned reputation for finding any reason not to pay damage claims. Lower cost to Canada. More expensive for most ground shipments. Union (teamster) employees.

FedEx Express: Like the old commercial "When it absolutely positively has to be there overnight...", there's nobody better. If it's mission-critical, I send it FedEx Express. Expensive, but worth it. Employees, but (I believe) non-union.

FedEx Ground (formerly RPS): An unmitigated disaster. Almost every time I've used FedEx Ground, it has been a problem resulting in a refund to an unhappy customer. FedEx Ground does use independent contractors who buy both the route and the vehicles and operate as 1099 independents. About a third of independents responding to an informal survey agreed. The other two thirds had different experiences. Some were much better. In my opinion, FedEx Ground is doing untold damage to the FedEx brand name.

DHL (includes the former Airborne): An excellent competitor with a good delivery history. Actually bigger than FedEx and UPS combined, though much of their size comes from EU operations. Internationally there's nobody who can touch them. They're both faster and less expensive than FedEx Express to almost every international destination. They use some independent contractors but are moving away from that position. Other employees are teamsters. For most parcels, DHL is the least expensive alternative.

I hope that adds something useful to the conversation.

One flaw in that plan would be that Condi couldn't be named V.P. That
office would, Constitionally, (IIRC), be filled by the Speaker of the House.
Would it not? I believe this is what happened when Spiro Agnew retired and
Gerald Ford moved into the V.P.'s office.

About nine years ago,I ordered a few soft back books from a book store.When my package got here (via U.S.Post Office) there was a hole about the size of my thumb in the top right hand side of my book package and a lot of Scotch tape over the hole,I am postive the book store would NOT ship anything in such a shabby condition as that.This morning,I received a package via snail mail from someone in Europe.There is a large ripped area about four inches square in the middle of my package I received via snail mail/U.S.Post Office and there is a lot of Scotch tape over that large ripped area on my package.I don't care what anybody says about the U.S.Post Office,the U.S.Post Office is Absolutely the WORST Way to ship anything!

"This week, Former Secretary of State Colin Powell's right-hand man unloaded on the Bush Administration during a speech to the New American Foundation, saying American foreign policy had been hijacked by "a Cheney-Rumsfeld cabal" that has destroyed this country's credibility with its allies.

"I'm not sure the State Department even exists anymore," Col. Larry Wilkerson, Powell's chief of staff, told the audience of journalists and scholars. "It, like so many others things, have been destroyed by George W. Bush's 'cowboyism.'"

Wilkerson dismisses the Administration's attempts to improve America's image abroad.

"You can't sell shit," he said. "

Twenty dollars is the same price quote I got from a guy at the Deville camera store about five years ago.I scratched that idea real quick! I reckon next time I am going to a local Wal Mart store,(probally on Saturday,this week) I will take my pictures and slides with me and ask them.I have a printer attached to my webtv box and another printer attached to my computer.No problem for me to buy a scanner for my computer,but I am not that much into doing pictures and photos or scanning thingys.

Charlile,
Very good summary! As a degree holding packaging design engineer it
warms my heart to finally run accross somebody from the "pack & ship"
environment who is well versed in protective packaging. Though I've
now been out of the packaging business for several years I do recall
when I was leaving the field that new foam-in-place formulations that
were more resilient were coming to the market so they might be worth
re-looking at.

Tropo is probably harder than Moonbounce. That's one of the reasons
there was no civilian use of Tropo. Amateurs were using 1 Kw in the
1950's in the 6 meter band. Admitted very limited bandwidth, but
Tropo needs tens of kilowatts.

I don't doubt the antenna was capable of Moonbounce, but by the mid
1960's, there wasn't a good reason to use Moonbounce any longer. The
geometry had to line up, so you might have wait a long time (12 hours
or more if you were unlucky), whereas a Sat was almost guaranteed to
come into view in a few hours, and if the military had bought capacity
on Syncom (and I have no idea if they did or didn't), they wouldn't
have to wait at all...

A few months ago I mailed a Satellit 800 to The Netherlands via USPS Airmail Parcel Post. Used the original box and packing exactly as I received it from Grundig / Eton... nothing else. Arrived in perfect shape in about 10 days.

The radio should have arrived from Grundig in a color product box that's within a heavy brown outer carton... so Grundig does double box them.

"Bill" <duckybill@indy.rr.com> wrote in message news:Cu17f.91766$tD4.82652@tornado.ohiordc.rr.com...

Hprecdocks,

The inner 'box' is called the Retail Display Box.

The Other "Box" is call the Distribution Shipping Box.

This 'dual' packaging Box System is designed to work
together for both Store-to-Store Shipping and then
In-Store Display of the available stock.

3877. Interesting Shortwave {Two} Loop Antenna design.

Newsgroup: rec.radio.shortwave
Date: 2005-10-25 08:20:57 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130228457.524445.126720@z14g2000cwz.googlegroups.com>
Source record: 46135

FO&A,

There is a simple Shortwave Loop Antenna design that uses
Two Loop Elements being offered on eBay.

Uses a two Loop Tuning Arangement with a smaller pick-up
Loop Antenna to connect to the Radio/Receiver.

Plus there is a Switch (possibily) to change the Two Series
Loops for the Lower Shortwave Band Frequencies; to a Pair of
Parallel Loops (One Loop) for the Higher Shortwave Band
Frequencies.

Shortwave Loop Antenna

> Tropo is probably harder than Moonbounce.

That's an overgeneralization. There's no way it would be easier to
moonbounce a signal to a location 20 miles over the horizon than it would be
to use tropo scatter.

> That's one of the reasons
> there was no civilian use of Tropo. Amateurs were using 1 Kw in the
> 1950's in the 6 meter band.

No civilian use as of when? The 1964 ARRL handbook says:

"Tropospheric scatter is prevalent all through the v.h.f. and microwave
regions, and is usable over distances up to about 400 miles."

The 1955 handbook also mentions tropospheric propagation at vhf and above,
but isn't so specific.

The biggest problem with early vhf work wasn't a lack of power or
insufficently high gain antennas, it was unstable oscillators. Those
oscillators drifted, and the radios had to have an otherwise excessively
wide IF bandwidth in order to allow for the drift. Getting a very narrow CW
bandwidth at vhf, for a decent signal to noise ratio, was almost impossible.

By the way, the 1983 handbook says:

"Most EME signals tend to be near the threshold of readability, a condition
caused by a combination of path loss, Faraday rotation and libration
fading."

It seems early 60s radio amateur equipment would work for tropo scatter, up
to about 400 miles. A later generation of such equipment would have to work
signals near the threshold of readability.

> Admitted very limited bandwidth, but
> Tropo needs tens of kilowatts.

The ARRL says different.

There was, and is, a very good reason for the military to have moonbounce capability. Things go wrong. Things break. Things get attacked. The more options we have, the better chance we have to keep a bad situation from getting totally fouled up. That's true, even for very difficult options like moonbounce.

Just pull up on it. I don't think it locks shut very well. The battery terminals need cleaning. That connection is for the elec connections and speakers in your automobile. Those were designed to be a portable that can also double as a car radio. See that little black plastic slide on the side? It would lock into the car bracket on that slide.

Where does one find such a transformer? Why does it need to be at
least 1:1? What does that mean?

I use a Palomar MLB-1. A 9:1 autotransformer which provides
sufficient impedance reduction to facilitate the use of Coaxial cable.

The 1:1 is for matching a narrowband dipole to a coaxial cable. The
whole point of it is to keep both poles of the dipole ungrounded.. I
don't see how it is relevant.

Some more numbers, with E1XM figures folded in:

Dynamic Range/IP3 (5 kHz):

1. AOR AR7030 82 dB / +1 dBm
2. Drake R8B 75 dB / -20 dBm
3. Watkins-Johnson WJ-8711A 74 dB / -18 dBm
4. Sony ICF-2010 68 dB / -21 dBm
5. Drake SW8 67 dB / -26 dBm
6. Sony ICF-SW77 64 dB / -37 dBm
7. Eton E1XM 55 dB / -50 dBm
8. Ten-Tec RX-340 46 dB / -55 dBm

Dynamic Range/IP3 (20 kHz):

1. AOR AR7030 100 dB / +28 dBm
2. Watkins-Johnson WJ-8711A 99 dB / +20 dBm
3. Ten-Tec RX-340 93 dB / +9 dBm
4. Drake SW8 92 dB / +11 dBm
5. Drake R8B 89 dB / +2 dBm
6. Eton E1XM 87 dB / -2 dBm
7. Sony ICF-SW77 82 dB / -10 dBm
8. Sony ICF-2010 80 dB / -9 dBm

Image Rejection:

1. Ten-Tec RX-340 >100 dB
1. AOR AR7030 >100 dB
2. Eton E1XM >90 dB
3. Drake R8B 85 dB
4. Watkins-Johnson WJ-8711A 80 dB
4. Sony ICF-SW77 80 dB
5. Drake SW8 64 dB
6. Grundig Satellit 800 63 dB
7. Sony ICF-2010 62 dB

First IF Rejection:

1. Ten-Tec RX-340 >100 dB
2. AOR AR7030 95 dB
3. Drake R8B >90 dB
4. Grundig Satellit 800 86 dB
5. Sony ICF-2010 85 dB
6. Sony ICF-SW77 80 dB
6. Drake SW8 80 dB

7. Eton E1XM 75 dB

Blocking:

1. Drake R8B 135 dB
2. Grundig Satellit 800 132 dB
3. AOR AR7030 >130 dB
4. Drake SW8 125 dB
5. Watkins-Johnson WJ-8711A 123 dB
5. Eton E1XM 123 dB
6. Sony ICF-SW77 121 dB
7. Ten-Tec RX-340 109 dB
8. Sony ICF-2010 109 dB

AGC Threshold:

1. Drake R8B 0.9 uV, Superb
1. Drake SW8 0.9 uV, Superb
2. Grundig Satellit 800 0.8 uV, Superb
3. Sony ICF-2010 0.6 uV, Excellent
4. Ten-Tec RX-340 0.5 uV / 0.13 uV (preamp off/on,
Excellent/Poor)
5. Eton E1XM 0.3 uV, Good
6. Sony ICF-SW77 2.0 uV, Good
7. AOR AR7030 2.25 uV, Good
8. Watkins-Johnson WJ-8711A 0.11 uV, Poor

Phase Noise:

1. AOR AR7030 130 dBc
2. Sony ICF-SW77 122 dBc
3. Watkins-Johnson WJ-8711A 115 dBc
4. Drake R8B 114 dBc
4. Sony ICF-2010 114 dBc
5. Ten-Tec RX-340 113 dBc
5. Eton E1XM 113 dBc
5. Drake SW8 113 dBc
6. Grundig Satellit 800 111 dBc

Overall Distortion, sync:

1. Drake R8B 0.4 %
2. Drake SW8 1.2 %
3. AOR AR7030 2.0 %
4. Sony ICF-SW77 2.3 %, 3.3 % (Wide/Narrow)
5. Grundig Satellit 800 2.4 %
6. Ten-Tec RX-340 2.6 %
6. Eton E1XM 2.6 %
7. Sony ICF-2010 2.9 %, 3.5 % (Wide/Narrow)
8. Watkins-Johnson WJ-8711A 8.2 %

Max. Sensitivity:

1. Watkins-Johnson WJ-8711A 0.13 uV
2. Ten-Tec RX-340 0.14 uV
3. Sony ICF-2010 0.15 uV
3. Eton E1XM 0.15 uV
4. Sony ICF-SW77 0.16 uV
5. Drake R8B 0.2 uV
6. AOR AR7030 0.2 uV
7. Grundig Satellit 800 0.23 uV
8. Drake SW8 0.32 uV

Ultimate Rejection:

1. AOR AR7030 90 dB
2. Watkins-Johnson WJ-8711A >80 dB
3. Drake R8B 80 dB
3. Eton E1XM 80 dB
4. Ten-Tec RX-340 70 dB
4. Grundig Satellit 800 70 dB
4. Drake SW8 70 dB
4. Sony ICF-SW77 70 dB
4. Sony ICF-2010 70 dB

I agree that Condi is more intelligent than most of the people that would be voting on her in CONgress.. but what would keep her from being confirmed as Veep is the fact she's both female and black. I'm neither sexist nor racist, but there are more than enough out-and-out or closet such in the country that if she were to be confirmed as Veep, with the possibility she could become President without a vote of the people, there would likely be a hew and cry such as never before seen in the US.

3958. FYI - Sony ICF-SW7600GR Radio with AN-LP1 Active Loop Antenna

Newsgroup: rec.radio.shortwave

For One and All,

There is a Sony ICF-SW7600GR 'portable' AM/FM Shortwave Radio with the
Sony AN-LP1 Active Loop Antenna currently on eBay.

eBay Auction Item Number : 5823221447

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5823221447

Looks like a complete ready-to-go 'portable' Shortwave Radio with
Active Shortwave Loop Antenna for the SWL Traveller on-the-go.

There was an ATT commercial Tropo link from Florida Keys to Cuba for
years. 900 MHz I think. The huge dishes (a pair) were standing for years
off Card Sound road. Probably gone now. I wish I had thought to play
radio using the feed point. Probably great 2 meter tropo DX on the ham band!

>Tropo is probably harder than Moonbounce. That's one of the reasons

What would keep her from being confirmed is her being a *spineless*
"yes woman". I was hoping Colin Powell would resign and retract after
the WMD debacle. That would have made him presidential material in my
eyes. But he did too little too late.

According to a recently released shortwave book, the only radios that surpass the Eton E1's rating cost three or more times as much money. Several radios received the same rating including the Satellit 800. It looks like the E1 might be a pretty good radio. Perfect? No, but there's no such thing.

JD,

Antennas and Grounds : Do It Step-by-Step !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6009

Some sort of Matching Transformer at the junction of the Wire Antenna
Element and the Coax Cable Feed-in-Line is a good First-Step.

Mounting this Matching Transformer directly to the Top of a
Ground Rod is a good Second-Step.

The placing the Coax Cable on the ground or burying it
under the ground is a good Third-Step.

Finally using a 1:1 "Isolation" Matching Transformer {Coax-to-Coax}
that uses a common Ground and that is itself Grounded; where the
Coax Cable leaves the Ground and enters the House is a very good
Fourth-Step.

Plus don't forget the Shack's Own Ground System 'bonded' to the
House's Electrical System. [STEP-ON-IT !]

Since you mentioned coaxial cable ... can I use the cable TV coaxial cable coming into my house for broadband/TV as an antenna to my shortwave radio?

Thank you for the "best practices" knowledge about disconnectig an external antenna from the radio when not in use.

You said it's a good argument for having a transformer (at least 1:1) in your feed line ... is a "feed line" the wire that acts as an antenna? What would the diagram look like to attach a direct path to ground?

Someone else mentioned an antenna wire around the perimeter of my house would most likely blow up the portable radio (either Sony ICF-7600GR or AOR 8200 MKIII B). Any truth to that?

I don't know what a lghtning arrester is, but I can easily look it up, thanks.

You mentioned you wrap your own transformers. I think that's neat. I'm not an electronics guy, but I am eager to learn. Do you just take a ton

of thin copper wire and wrap it around a spool a billion times?

Hello,

I just picked up an S350 last night. Seems to be a pretty nice little
unit!

I have a ~90ft wire strung across my backyard for an antenna
+ a ground rod outside my window. I'm wondering if I will need
anything more between the antenna and the receiver, or if I can
simply connect the wires and expect it to work.

I don't have any coax yet (placing an order in a week or two),
so I was also wondering what I could do in the meantime?

What is the best way to make the connection from the coax to
the radio? (I just have 2 speaker-wire type clips).

Thanks in advance!

For One and All,

SWLZ - Shortwave Listener Longwire Matching Transformers
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6034

As far as giving you the information that you need to take one
of his SWLZ Shortwave Listener Longwire Matching Transformers
and building your own SWL Antenna with it . . .

RF Junkie provides just about all the information that you need
to get the job done - IMHO

RF Junkie 'introduces' new SWLZ Balun using "F" Connector
for RG6 Coax Cable
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/4245
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/4246
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/4249

From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130324186.776502.69090@g14g2000cwa.googlegroups.com>
Source record: 46410

Sanjaya,

ABOUT - The AOR LA380 WideBand Active Loop Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6035

Since the AOR LA380 WideBand Active Loop Antenna accepts
a BNC Plug; it should already have a 50 Ohm Output Impedance
and therefore should not need any Matching Transformer. It can
be directly connected to your Radio Receiver.
http://www.aorusa.com/la380.html

Per Grove Enterprises the AOR LA380 Wideband Active Loop Antenna
has an Impedance of 50 Ohms
http://www.grove-ent.com/LA380.html

Per LA380 Leaflet (PDF Format) the Impedance is 50 Ohms
http://www.aorusa.com/la380.html

LA380 Operating Manual (PDF Format)
http://www.aoruk.com/direct/pdf/la380_manual.pdf

LA380 - Short Wave High Performance Table-Top Active Loop
Aerial, {Antenna} usable range : 10kHz - 500MHz
http://www.aoruk.com/direct/la380.htm

WHY NOT THE WELLBROOK ? ? ? ALA 1530 :
If you are in-fact considering the AOR LA380 WideBand Active
Loop Antenna : Then you should also be considering the
WellBrook Active Loop Antenna Model ALA 1530 150kHz-30MHz
which is a One Meter Diameter Aluminium Loop for Longwave,
Medium Wave and Shortwave.
http://www.wellbrook.uk.com/products.html
http://www.wellbrook.uk.com/ALA1530.html

There is a place,
Where I can go,
When I feel low,
When I feel blue.
And it's my mind,
And there's no time when I'm alone.

I think of you,
And things you do,
Go 'round my head,
The things you said,
Like "I love only you."

In my mind there's no sorrow,
Don't you know that it's so.
There'll be no sad tomorrow,
Don't you know that it's so.

There is a place,
Where I can go,
When I feel low,
When I feel blue.
And it's my mind,
And there's no time when I'm alone.
There's a place ...

The LA380 is probably a fine antenna, but it's an indoor antenna.
That's why I'd suggest that you consider a Wellbrook loop that you
could locate outside your home, even if it's only on a balcony or
patio.

Steve .

Steve - Is that a Revelation ?

For all of it's commercial life Passport To Word Band Radio (PTWBR)
has had lots and Lots and LOTS of ADs !

Yes - PTWBR has pages upon Pages upon PAGES of Eton {Grundig) ADs !

Often Eton Corp {Grundig USA} has been a Prime ADs Buyer in PTWBR.

4009. MediaLine Radio for 22 October 2005

Newsgroup: rec.radio.shortwave
Date: 2005-10-26 14:15:46 UTC
From: hgbrice@e-garfield.com
Message-ID: <1130336146.621087.49080@z14g2000cwz.googlegroups.com>
Source record: 46421

The current edition of MediaLine Radio is now available for download at http://medialineradio.com . In this edition:

* Blogging
* The President of the Canadian Media Guild joins us to talk about the recent lock-out at the CBC, journalistic independence and more in the first part of an in-depth interview.
* An episode of Space Patrol from the 1950s.

Please note that as well as being available on demand at the website, MediaLine Radio also airs at various times on IRRS-ShortWave (http://www.nexus.org/radio.htm) and WorldFM (http://www.worldfm.co.nz).

4010. Radio Australia (ABC) on 9.580 MHz in English

Of course, there aren't too many receivers in the 600-900 price range. In fact, the only one I can think of offhand is the Palstar R30CC. I guess there are also some software defined receivers, but I'm not sure how many of them fall in the relevant price range.

Number one in relation to which other radios. There are not many for comparison. It isn't much of a threshold if the receiver in question is number 1 in a field of 1 or even 2 radios.

Sanjaya,

ABOUT - The AOR LA380 WideBand Active Loop Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6035

Since the AOR LA380 WideBand Active Loop Antenna accepts
a BNC Plug; it should already have a 50 Ohm Output Impedance
and therefore should not need any Matching Transformer. It can
be directly connected to your Radio Receiver.
http://www.aorusa.com/la380.html

Per Grove Enterprises the AOR LA380 Wideband Active Loop Antenna
has an Impedance of 50 Ohms
http://www.grove-ent.com/LA380.html

Per LA380 Leaflet (PDF Format) the Impedance is 50 Ohms
http://www.aorusa.com/la380.html

LA380 Operating Manual (PDF Format)
http://www.aoruk.com/direct/pdf/la380_manual.pdf

LA380 - Short Wave High Performance Table-Top Active Loop
Aerial, {Antenna} usable range : 10kHz - 500MHz
http://www.aoruk.com/direct/la380.htm

WHY NOT THE WELLBROOK ? ? ? ALA 1530 :
If you are in-fact considering the AOR LA380 WideBand Active
Loop Antenna : Then you should also be considering the
WellBrook Active Loop Antenna Model ALA 1530 150kHz-30MHz
which is a One Meter Diameter Aluminium Loop for Longwave,
Medium Wave and Shortwave.
http://www.wellbrook.uk.com/products.html
http://www.wellbrook.uk.com/ALA1530.html

hope this helps ~ iane ~ RHF
.
.
Thank you.
I was intrigued by the 1 foot diameter of the LA380.

And give up the Fun of "Cutting" the Coax Cable everytime
you cut the Grass :o)

One of the main things here is for those individuals who
disconnect their Coax Cable at the Antenna when not in-use.

If the Coax Cable is in the Air with the end disconnected
from the Antenna then the Coax Cable will itself become a
Lightning Attractor in a Storm.

Burying the Coax Cable just helps to reduce the Chances of
it becoming an Attractor.

DUH ! - Don't Bury the Coax Cable alone-side
the Under Ground Utilities - It Ain't Smart !

Sanjaya - And One Foot is all you get [.]
About 113 Sq In of Signal Capture Area (Aperture)

The WellBrook at about a Meter Diameter is larger.
About 1217 Sq In of Signal Capture Area (Aperture)

"Build - Your - Own" Loop Antenna

A GreerTech RG8 Coax Cable Loop Antenna used with an Active
Pre-Selector could be a low cost 'better radio reception'
answer instead of the with AOR and WellBrook WideBand Active
Loop Antennas.

A "GreerTech" Coax Cable {Shielded} Loop Antenna
Thirteen Foot (13') RG8 Coax Cable Loop Antenna Element with
a Four Foot (4') Diameter and a Three Foot (3') Feed-in-Line
with PL-259 Plug; for a Total Length of 16 Feet .
LOOP INFO => http://tinyurl.com/8k7o6
Has a Signal Capture Area (Aperture) of about 1808 Sq In
and can be used with many of the MFJ Active Pre-Selectors
MFJ-959; MFJ-1020; MFJ-1040; MFJ-1045; etc to provide an In-Door
Low Noise Loop Antenna to Null-Out many 'local' Noise Source.

4043. Suggestion for the group

Newsgroup: rec.radio.shortwave
Date: 2005-10-27 01:51:55 UTC
From: Jake <JMese@comcast.net>
Message-ID: <4K2dnSySqpshr_3eRVn-iQ@comcast.com>
Source record: 46355

Let me start off by saying:

I have very strong political beliefs. I am guilty of responding to politcally heated debates in this forum. Trust me, there are some people on this forum I would dearly love to choke the life out of. Which side I'm on is really unimportant. There are plenty of political discussion groups which are the proper place for these political discussions.

There is one particular non-shortwave topic (a post only three days old) "It could happen here" which I just counted had over 60 posts whereas some really interesting shortwave posts have drawn only two or three posts. I wonder what someone trying to get into the shortwave hobby would think?

I am not trying to control anybody or the group it's just a suggestion. Those 60 posts previously mentioned could have been 60 new posts about the Eton E1, a Drake, a new found frequency or even a new type of antenna.

Can we stop the name calling/fingerpointing and talk about shortwave? That's why I come here.

4044. Eton S350 DL -=V=- Grundig S350 : Audio Quality and Sound Output ?

WalterB,

Eton S350 DL -=V=- Grundig S350 : Audio Quality and Sound Output ?
http://groups.yahoo.com/group/Grundig-S350/message/3466

Unless the Eton S350DL has a different Audio IC then the
original Grundig S350 (TDA 2822M) to drive the single Speaker
then the sound improvement can only be slight : Just enough
to hear the difference.

However - If they are using a newer more powerful Audio IC
and possibly an added OutPut Driver : Then you would feel
and hear the 'difference' in the Audio Output and Quality.

Since Eton Corp only used a slightly bigger single Speaker it
is my opinion that the Eton S350DL uses the same Audio IC
(TDA 2822M) as the original Grundig S350 / Tecsun BCL-2000
Radios.

FWIW - Had the Eton Corp used a Pair (two) Speakers in the
new Eton S350 DL Radio with a Pair of Power Output Transisors
(like the GE Superadio II and III) : Then Clearly the Sound
Output and Audio Quality of the Eton S350DL would be far
superior to the Grundig S350 Radio.

TBL - Big is not neccessarily Better nor does it sound better.

and that's my two cents worth ~ RHF

I have strong political beliefs too.

You are going to have to kill file a small group of people and the
people that respond to their posts. That will get rid of 98% of the crap.

dxAce,

You are correct because I change my profile and email often for a variety of reasons. This ID is not more than a few days old. As a matter of fact, you and I have corresponded via email. Also unless you've changed your phone number recently I also have that but don't worry I'm not about to start harassing you. The most important thing is that you have a really nice station setup and that you have a vast array of knowledge which I hope that you are willing to share on here.

So back to my original post...

Let's get this newsgroup in order before it's nothing but political posts and Viagra pushers.

Jake, I couldn't agree with you more. Some of us get way off the intended purpose/subject of this group at times. Please, let's listen to what Jake is saying here and at least TRY to focus our attention on some subjects that actually belong in this group. Some of what I have read here in the past 3 months would pretty much convince me NOT to even consider radio as a hobby if I was considering it at the time. There's many newcomers to the hobby that like to check out the various sites/groups in order to learn more about becoming a decent radio hobbyist. I just think back to when I was first trying to learn about the radio hobby. I always appreciated facts and experiences related to the hobby and definitely not political commentaries and or personal insults. I could then, and can now, get way more than enough of the latter two to last me a good long while via other sources. Thanks, Jake, for saying/typing what I have wanted to say for a while now.

Here's a novel thought:
What if nobody would respond to the off-topic comments? There's at least 50% of the drivel eliminated right there. Let the off-topic people just type/talk to themselves. I generally don't give the "out-there" commentators the satisfaction of a real reply nor will I in the future.

Just for sh**s and giggles:

1. What NAm pirate radio station featured the evangelist named Rev.
Dean Bean?
2. What was the name of the New Zealand pirate radio station that was
very active in the 1980's and was sometimes relayed by US pirates?
3. Which US shortwave pirate featured "Uncle Ralph"?
4. RF Burns was the announcer of which famous US pirate station?
5. What pirate claimed to be broadcasting from the skies above North
America?
Hey, can anyone out there get all 5 of these?

"choke the life out of"? I'm sure that's an exageration, but if you really wish any kind of harm on somebody based on a usenet post, you are taking this way too seriously.

>Which side I'm on
> is really unimportant. There are plenty of political discussion groups

I got far fewer than 60. I have a killfile.

> I
> wonder what someone trying to get into the shortwave hobby would think?

They'd be thankful they can listen to their radios without interacting with usenet posters.

>
> I am not trying to control anybody or the group it's just a suggestion.
> Those 60 posts previously mentioned could have been 60 new posts about the
> Eton E1, a Drake, a new found frequency or even a new type of antenna.

No way there'd be 60 new posts about the E1. Or 60 on the other topics. Well, there's no way there'd be 60 relevant posts. Far fewer posts than that would cover all the facts and worthwhile opinions. Just consider the large number of short on topic threads. A few informed comments say it all. Compare those short threads to the megathreads which contain most every insult known to mankind, or at least continual repetition of the insults known to rec.radio.shortwave. Human nature being what it is, the heat will be more active than the light.

> Can we stop the name calling/fingerpointing and talk about shortwave?
That's

> why I come here.
>
>

Why complain? People aren't going change their posting habits based on your preference. You may find the group more enlightening if you killfile the most active posters.

www.devilfinder.com Thomas Burnside Radios Jackson Mississippi

Well,I think I will stop off at old man Thomas Burnside's home (he lives exactly one mile West of me on on South Westhaven Drive,he buys and sells tube type and transistor radios and old clocks and wristwatches,different kinds of old things from estates and or whatever) this afternoon after I stop off at the Goodwill store first and see if Thomas has come up with any real good old Shortwave radios.If so,they won't be cheap because he keeps up with old tube type radios and he knows the value of old radios.

Alfa Lima International regularly on 15070, also this weekend again

Last 3 weeks have been een huge succes, we have been penetrating deep into Canada and USA. aswell received by a lot in south and east Europe end got a few reports from Australia. We hope conditions are still the same upcomming weekend or maybe even better.
WE wont have the exact times when w'll be on air, but for sure that we try to be on a lot in the weekend..
Frequency will be 15070 and maybe aswell a few times on 21860
We will be 90 % of the time we spent on air also in the chatroom witch can be found at
http://www.alfalima.net/chatroom
Emails are also more than welcome. info@alfalima.net
and we will also react on postings in the sw pirates forum at
http://www.alfalima.net/forum
If you like to receive our QSL Card see the information below

PS,,, There are also other pirates that might be airing a program, Keep an eye out for Cupido on 21890, Black arrow on 15795 or 15076
and RSI (radio Space shuttle International) on 15800. In might be that our information is 25 < 0 >25 kc Incorrect so turn the dail a little ;)

Good afternoon

The Digitalfotoclub for $130. Do you really think they are brand new untouched for $130?? Not open box, refurbished, factory fixed etc. I saw one vendor, "Techs for Less" had it for $129 but never mentioned it till he couldn't get away with it anymore and finally had the one word "refurished" added somewhere in the description

What do you and others thing about this vendor?

Thank you
Glenn

http://www.rense.com/general68/nasaisnt.htm

" And then there are numerous MECHANICAL ARTIFACTS.

A likely scenario is that a space vehicle exploded high above the
surface, blackening the rocks and blocks, destroying the city or town
and forming the crater. Then shortly afterward, mechanical fragments
from the space vehicle rained down on the area which is still lying
there today, although they are
now probably fossilized and coated with dust. The implications of this
are enormous and cannot be overstated."

What we don't know - is just how deep down the debris field reaches. "

- Theres a link between this and the Nigerian Yellowcake Forgeries..

Saddam sent his WMD's to Mars, and they then blew up...

- Wish someone had printed all this before,

would've eliminated the risk involved when George Bush landed on the
Aircraft Carrier . . . .

I am talking about *all* the stuff on his website, not just the Mars thing. Some of it, I am familar with as being pretty reliable, some of it not. I won't say at this point what that proportion is. The mere fact that it shows up on his website does not mean he is pushing it (although he might be) - ultimately the key is deciding for one's self what information is worth keeping and what is worth discarding.

I think what you have is some combination of the following:
1. The tendency of humans to want to see patterns in random
characters.
2. A ditigal image that could have been distorted at any point in the
transmission and decoding.
3. The possibility of manufactured or doctored images.

This picture is great: http://www.rense.com/general68/TheThing.jpg

It is either a Hoover vacuum cleaner specially designed for cleaning all that windy dusty low pressure Martian atmosphere. Or it is the bleached skull of a martian cow.

Yeah, right!!!!!

Sure. An external amplified antenna is in my experience of limited or
no value on a small portable like the 7600. What may seem like an
improvement in the signal is in reality just all signals and noise
being lifted equally on a given frequency. In my experience a simple
piece of wire will get the same results.

4092. Using the Sony ICF-SW7600GR Radio with the Sony AN-LP1 Active Shortwave Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-10-27 22:28:25 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130452104.970555.106920@g47g2000cwa.googlegroups.com>
Source record: 46304

John S.

So it looks like we are in disagreement again.

Here is my 'opinion' based on my personal experience using the
Sony ICF-SW7600GR 'portable' AM/FM Shortwave Radios by itself;
with a 23 Foot Roll-Up / Reel-Up "Portable" Shortwave Antenna;
and the Sony AN-LP1 Active Shortwave Loop Antenna

1. The Sony AN-LP1 Active Shortwave Loop Antenna is "Tunable"
(Pre-Selector) and can easily be place in a location (window)
for the 'best reception' = Strongest Signals and Lowest Noise.

2. The Sony AN-LP1 Active Shortwave Loop Antenna works well
for a Traveler who only has a Hotel/Motel Window as their
"Gateway" to the World of Shortwave Radio.

3. The Sony AN-LP1 Active Shortwave Loop Antenna can also work
well for some Shortwave Listener's who live in Apartments and
Condos and are very limited in using any type of OutSide
{Random Wire} Shortwave Antennas.

4. Most of the time those little 23 Foot Roll-Up / Reel-Up
"Portable" Shortwave Antennas that come with many 'portable'
AM/FM Shortwave Radios do not perform as well as the Sony
AN-LP1 Active Shortwave Loop Antenna. This is whether you
Plug the Sony AN-LP1 Active Shortwave Loop Antenna into the
Radio's External Antenna 1/8" Jack or simply Clip-It-On to
the Radio's Whip Antenna.

5. For Shortwave Listening (SWL) the combination of the
Sony AN-LP1 Active Shortwave Loop Antenna and the Sony
ICF-SW7600GR Radio usually works better then using the
Radio by itself.

TBL - Yes the Sony AN-LP1 Active Shortwave Loop Antenna does amplify
the Noise along with the Signal. But when you can not Hear them :
Then something is better then nothing. Not a perfect solution but
simply better than most other available or permitted options.

SsD,

External Speaker for the Icom IC-R75 Receiver - You Can Hear It !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6060
http://groups.yahoo.com/group/icomr75/message/10780

This is some what outdated - But Read Message # 4360 :
"Most Often Recommended External Speakers for the Icom IC-R75"
http://groups.yahoo.com/group/icomr75/message/4360

FWIW - The Icom IC-R75 Receiver only has a Mono-Phonic
{Single Channel } Audio Output that is rated at Two (2) Watts.
So a pair of Powered Computer {Stereo} Speakers will only
provide you with Mono Sound.

NOTE - The Two (2) Watts of Audio Output of the Icom IC-R75
Receiver is enough to power a single 4" to 6" Speaker and
fill the room with a reasonable level of good quality audio
sound.

TIP - Using one speaker from a pair of Book Shelf Speakers or
the non-powered Speaker from a pair of old Computer Speakers
will work with the Icom IC-R75 Receiver.

Normally I would agree but for two things:
1. This is a small aperture loop antenna, which would be lower noise
than a voltage sensitive or common mode antenna.
2. People have reported good results with it using the 7600GR.

****

good call Telamon. i use the an-lp1 in my car when i'm on the road.
i hang the loop near a window, off the rag top. never tried it on
a hard top. works better than the whip. and road noise isn't too bad.
i have 2 here, and i feel it's a good buy. this time last year, when
the word went around, that Sony was to stop making them, i saw the
an-lp1 go on ebay up to $150. another poster on this gp owns 4 of them.
Good DX...

Do you have the impression that the distortion is from the speaker itself or an internal problem from the receiver itself? I really don't know anything about the 390, so I'm just thinking in very basic terms here. Natturally my first thought is a blown speaker, but you didn't say if the audio is distorted while listening through your headphones. If it is, guess it's not a speaker problem....sorry, I'm sounding like my brother who is notorious for pointing out the obvious. If not a speaker prob, then I'll then I'll just pray, cause I'm like Schultz on Hogan Hero's....I know nothing. Good luck on the fix. I'd be interested in what worked on your repairs/replacements. Take care.

Drifter,

Sony ICF-SW7600GR 'portable' AM/FM Shortwave Radios
and the Sony AN-LP1 Active Shortwave Loop Antenna

The combination-of-the-two make for good traveling companions.

Place the Radio on the Table or Nightstand and next
Hook the Loop Antenna on the Window; and then
Connect the two togther and you are ready to listen.

The Radio and the Loop and a few other accessories
all fit into a Men's Travel Kit Bag => http://tinyurl.com/due8g

yes it is as simple as that - iane ~ RHF

I am interested in homebrewing an antenna for up in my attic. I don't know how effective antenna in attic will work. I would like to hear if anybody else has stuck antennas in attic.

So I'm soliciting ideas for antennas. Attic is reasonably good size. I think about 60' x 30' and about 12' high at the center. Coax coming down to shack is 70ohm.

Not sure what bands I would like to cover just yet. I have some kinda discone at work that the EMI guy uses for radiated emission tests that looks interesting. Maybe somthing that would work well on the VHF bands on my Drake. Lots of police action on the 40mc band too. Other alternative I could feed DC up the coax and pick from two homebrews.

I presently have a 75m dipole, a 160m dipole, a 5btv verticle, a 2m ringo on the roof, and a homebrew 2m ant in the attic that I used previous to installing the ringo. I've been temporarily using the 2m attic unit for vhf on the Drake.

Ideas please!

= = = In Shortwave-SWL-Antenna@yahoogroups.com,
= = = "amir_segal2001" <amir@s...> wrote:

Hello,

Last night I started an RF Noise thread on the R75 groups,
but I think this is a more suitable forum. So here goes...

We all suffer from some RF noise killing us on listening to
our great radios. I know when I turn on my plasma tv in my
bedroom - forget about listening to anything. When I have
my light dimmer on - forget about listening. I am sure other
devices around my house kill me too that I am not even aware of.

I am trying to understand the issue and any way to rectify it.

I am using an AOR SA7000 roof-mounted antenna with coax from
it to the edge of the roof, drapes down to my bedroom window,
through the screen, around the room and into the receiver on
my nightstand. The SA7000 coax is RJ (or RG?) 58 with 50 Ohm
impendence which matches my R75 and AOR 7030 perfectly.

1) Is the noise from the TV (and dimmer and other) being picked
up by the portion of the COAX that is in the house or by the
antenna on the roof or both?

2) Will a balun help? What size or ratio? Configuration?

3) Can you find the sources with a device or other methods?

4) Can you find the frequency of the noise and will notching
with a filter help?

Someone suggested Eagle dimmer switch that has no noise.
Anything else that can be done?

At times when the TV is off and I turn everything off
(or sometimes even with certain items still on - not the tv,
though...) I get basically perfect, noise free reception.
But that's very rare.

Any help, advice or "lesson" will be appreciated!

Thanks,

Amir

Greetings all...

I have a raft full of mp3 files that I copied off of the air and wish to convert them to mp3 files in order to conserve memory. It's mostly interval signals and utes (like IAR's farewell message in CW - check out 8760 CW to hear the last of the titans) and not to rip off CD's, movies, etc. Anyone in UTE/Shortwave/Amateur land out there have any recommendations?

Also, I've been using VOX Recorder by Nino Porcino, which is a nifty piece of software that can be vox controlled. Is there any other software programs out there recommended by SWL'ers that can do formats such as mp3? Maybe even one that can record on a timer?

Thanks in advance! 73, The prince of pastry

Though I have not used the AN-LP1 antenna I do have a 7600G and find
it a good travel radio, actually a good radio period (in it's class).

I checked out the link and almost choked when I read the price -
$79.95 for a leather bag seems too rich a choice for either it's
intended purpose or for use in protecting the radio. For those
seeking a means of carrying their portable and some accessories, I
suggest Bagmaster https://www.bagmaster.com/index.htm and their
rectangular pistol pouches. These items have padding, an accessory
pocket and magazine pouches that could be put to use to hold pens &
pencils, a penlight, notepad etc. They are made of 'ballistic nylon'
and the largest size is about $36.

As long as you don't have a metal roof and have shingle, tile or the
like then I would make a folded dipole out of 300 Ohm twin lead and
connect it to the coax with a 300 to 75 Ohm transformer.

Some of those TV / FM transformers are not very good lower than 10 MHz.
Find one with a comparably hefty core and avoid ones that use other
components other than a wound ferrite core.

You will have a good match antenna / transformer / coax and a small
mismatch at the radio input.

I have a President Washington CB. The am, lsb, usb knob or button is hard to turn. Their nothing wrong with the knob. Maybe only the design. It too round and I can not get a good grip on it. Often I use a cloth to grip it to turn.

Now, I am thinking about taking off the knob and replacing it with a chicken head or what ever more narrow knob I would find.

I would like to know if I could simply use a small flat driver and pry off the knob?

I hope that I do not have to open up the radio.

The knob may just lift off, or it may have a set screw that must be backed
off before removing the knob.

I can not pry off the knob, it's too in the radio. I am now trying to
see it I could make some kind of a small clamp that can work as a lever.
This would give me leverage to turn to the knob for ssb operations.

Any ideas?

I remember I once had this same problem with the Cobra 148 GTL. I think
the reason why they made all of the knobs this way was because they were
probably competing with am/fm stereos radio during the disco era, that
had fine looking knobs.

Perhaps these may had been the first radios, when expensive shinny
looking machine made knobs became the new style.

When you look back to the Hammarlund, Grundig and Hallicrafters you see
a big difference in the style of knobs. Vanity vs performance!

I wonder if this was a break off from the Puritanical style, as you
would notice in furniture.

Although having a lighted red needle is very cool too!

For a timer, check out the Total Recorder
http://www.highcriteria.com/

Voxing shortwave isn't easy since often the signal is just barely above
the noise. The scanner recorder (www.davee.com) can record audio on a
PC, but the squelch is really designed to be used with NFM.

I don't understand the questions regarding mp3 compression since mp3 is
already compressed.

Krispy Kreme wrote:
> Greetings all...

Since I went to the wellbrook, I get much less QRM. However, an
effective tool for local noise is the ANC-4. I have the old JPS, but I
believe someone else bought the design and still produces it.

and yet we hear more from the conspiracy corner..

until someone can produce evidence (incontrovertible) of this, I may not tend to believe it. However, the EFF has some news about the DOJ being slapped down hard for its actions of late (getting warrants without p.c. for live tracking of woreless devices). here's the link for that one: http://www.eff.org/news/archives/2005_10.php#004090

ah well.....

Well if the recordings are under 80 minutes, why not burn them to CD?
You can also get special CDs that record 90 minutes, and some even
longer, I think... but you need a burner that can accomodate that.

4139. ABOUT - Making a SWL Antenna out of 300 Ohm Twin Lead and TV Coax Cable

Newsgroup: rec.radio.shortwave
Date: 2005-10-28 11:22:28 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130498548.777011.230170@g49g2000cwa.googlegroups.com>
Source record: 46451

For One and All,

ABOUT - Making a Shortwave Listener's (SWL) Antenna out of . . .
300 Ohm Twin Lead and TV Coax Cable.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6074

READ - Hot "KISAP" Antenna for Shortwave (HF) Bands
- by Cliff Donley [K8TND]
http://groups.yahoo.com/group/RX320/message/2471
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1497

About this "KISAP" Twin Lead Shortwave Antenna :
+ This Antenna design uses a 33 Feet Dipole Horizontal Top
Antenna Element made of 300 Ohm Twin Lead; joined at the ends;
and Fed in the Center (Middle) of one of the two parallel wires.
+ Fed at the Center by a 7 Foot Vertical 'matching' Section
made from 300 Ohm Twin Lead.
+ The Bottom of this Vertical 'matching' Section is connected
to a 300 Ohm to 75 Ohm TV type (4:1) Matching Transformer.
+ This Matching Transformer is then connected to a 75 Ohm
Coax Cable Feed-in-Line going to your Radio Shack.

Some thoughts concerning the "KISAP" Twin Lead Antenna :
* What you have is basically a 33 Foot Long Dipole Antenna Element
that is resonant around 14 MHz. (Half Wave Length Dipole)
* The 7 Foot Vertical 'matching' Section is roughly an Eight
(1/8th) Wave Length Long.

Meter - - Top - - Matching
Band - - Dipole - Section
60M = = 95.4 Ft plus 23.9 Ft
49M = = 77.4 Ft plus 19.3 Ft
41M = = 64.8 Ft plus 16.2 Ft
31M = = 48.5 Ft plus 12.1 Ft
25M = = 39.5 Ft plus 9.9 Ft
22M = = 34.1 Ft plus 8.5 Ft
19M = = 30.3 Ft plus 7.6 Ft

SIZING - The KISAP Broadband Shortwave Antenna and . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1511
Converting it to a Multi-Band "Windom" SWL Antenna
* Cut the Long-Arm of this Windom Antenna for the 49 Meter
Shortwave Band with the Long-Arm's Length = 38.52 Feet (62%)
* Cut the Short-Arm of this Windom Antenna for the 31 Meter
Shortwave Band with the Short-Arm's Length = 24.13 Feet (38%)

Total Length of this Top Windom Antenna would be 62.65 Feet
* Cut the Vertical-Leg of this Windom Antenna for the 19 Meter
Shortwave Band with the Vertical-Leg's Length = 15.15 Feet
Mount this Windom Antenna between 25 to 40 above ground with
30-31 Feet High being about right.

300 OHM TWIN LEAD ANTENNA SHORTWAVE LISTENER (SWL) READING LIST :

* Distributed Capacitance Twisted Loop (DCTL) for the
40 Meter Band Delta Loop Antenna - by Arnie Coro [CO2KK]
http://www.radiohc.org/Distributions/Dxers/scripts/02-0115.html
Note - The "DCTL" was developed by Jim McLelland [WA6QBU]
http://www.radiohc.org/Distributions/Dxers/dctl-antenna.html
DCTL => http://www.io.com/~n5fc/dctl_ant.htm

* An Antenna You Can Build & The Exterior Version
(At the bottom of the webpage)
http://www.tackyliving.com/article.php?id=61
For several Images of good build techniques.

* One of the simplest Antennas that can be made with
300 Ohm Twin Lead is the Twin-Lead-Folded-Dipole
http://members.shaw.ca/weskyscan/images/TwinLeadFoldedDipole.gif

* Shortwave Listener's (SWL) Dipole Antenna
that is built with 300 Ohm Twin Lead

> Then something is better then nothing. Not a perfect solution but
> simply better than most other available or permitted options.
>

You could very well be correct. This may in-fact be THE one portable amplified antenna that is able to deliver signals that could not be gotten with either the whip antenna or a simple wire antenna strung around a window. My experience with many other wunder-antennas has been that they are little more than a gadgety external volume control. After turning one or more knobs all signals get equally louder, but nothing magically pops out of the mud.

I've taken a variety of (mostly Sony) shortwave portables on trips over the years and have found that a simple wire strung around the hotel room window will gather a lot of signals in a less then perfect listening environment.

I may be wrong....and if I find one cheap enough I just might try it. But not at the going prices.

For One and All,

Question - So 'why' does the Radio Reception Improve sometimes
when I Touch the Radio's Whip Antenna ?

Answer: Because it likes you.

4147. Re: Suggestion for the group (Political Rants)

Maybe look at URL:
http://ac6v.com/swl.htm#ANT

Lots of Antenna stuff there

In general, my attempts at attic antennas are poor, picks up too much noise
from the house wiring.
But if you can;t get an antenna outdoors -- tis the court of last resort

BOB - " I presently have a 75m dipole, a 160m dipole "

Are these Dipole Antennas 'outside' or in-the-Attic ?

If these Antennas are 'outside' ? ? ?
Then why bother with an Attic Antenna ?

Is this Attic Antenna for Receive Only ?
Or will it also be used for Transmitting ?

That being said : The better Receive Only Attic Antenna
is the Horizontal Loop. Position the Loop about mid-way
between the Floor of the Attic and the Peak of the Roof.

I'm sure there are lots of programs out there. A relatively easy to use and free program for timed recording and compression is Audiograbber. It will record from the line in, or any application playing on your PC.

http://www.audiograbber.com-us.net/

You have to make sure that your PC sound card is fully duplex capable. There are other programs like Nero that will edit wave files before you decide to compress them.

4155. Running a radio from a large rechargeable cell or battery

Newsgroup: rec.radio.shortwave
Date: 2005-10-28 15:58:04 UTC
From: bpnjensen <bpnjensen@yahoo.com>
Message-ID: <1130515084.353877.75660@g44g2000cwa.googlegroups.com>
Source record: 46467

Hi, folks - I would like to try running my Icom R-75 at home from a 12 - 13.8 volt cell or battery. The requirements would be that the cell would be able to recharge from 115v AC during the radio's off time, and that while the radio is turned on, the battery would be electrically disconnected from the wall AC. It does not matter to me whether this connect / disconnect is manual or automatic.

This device might also run an MFJ Noise Canceller unit, which uses lower voltage (I would need to provide a step-down for this device, or a separate battery).

I would like the battery to be nice and big, something that would provide an easy constant 36 watts (12v at about 3 amp max) for several hours straight without strain. It would be nice if this device did not develop a memory (no NiCads, please). It would be nice if it were not an ugly thang with potential leaky chemicals like a car battery.

Can anyone recommend such a set-up, and/or some specific manufacturers and model nos. that might fill the bill?

Thanks so much ~
Bruce Jensen

If you want to spend some money, I'd say buy a copy of Soundforge.
Since Sony bought the company, the software is now reasonable (maybe
$60). You can probably find someone who has a "lite" version of the
software that came bundled with Creative Labs sound cards.

For free software, I suggest ignoring MP3 and going for "ogg vorbis"
or "lame". Google will get you the programs that can handle those
compressors. There are too many to name, though the "qcd player" comes
to mind. You need to get one of its plugins to do encoding.

Itunes has an AAC compressor, but it is limited in that the audio has
to be sampled at 44.1Khz in stereo. However, if you happened to record
at 44.1/stereo and don't have sample rate conversion software, Itunes
would do the trick.

Lastly, there is the ACM Station. It has sample rate conversion and
format conversion in one program. I got it when it was free, but now
there is a charge. The user interface isn't very good but the program
does the job.

There are plastic cases available for wet cell "car type" batteries that help prevent spilling the battery acid in case the battery tips over.You could set the battery in your garage (don't set the battery on a concrete floor) and run two long wires from the battery to inside your house.A good automatic battery charger and amp meter will help to keep the battery in good condition.Occasionally,use a piece of an old rag and a cup of warm water with baking soda in the water and wipe the battery.

I suggest getting a gell cell to avoid battery acid spills or fumes. I only use mine when in the field, so I don't have a set up as you suggest. I charge my battery from a bench supply using 13.8v as a float voltage.

Depending where you live, you may find used gell cells that are part of a data center backup system. These batteries live indoors and spend most of their life on float (OK for SLA batteries) and maybe once in a while provide backup. Alarms use similar style battiers, but not very high capacity. The Yuasa NP7-12 is a real common back-up battery. It is only 7 amp hours, but what you might do is get two of them, keeping one on the charger while you use the other. Typically in alarms or data backup, the batteries are replaced on a schedule rather than waiting for a failure, so there are plenty of free or low cost batteries available.

If you don't want to use a bench supply, West Marine sells all sorts of chargers, though a bit pricey.

Thanks everybody for the comments, and working my way back up the thread:

RHF - Dipoles are outside. The 160m dipole is about 250 feet from end to end and is more of a sloper than a true dipole. I center fed it with some very nice coax on my roof and strung ends out on the corners of my property. I operated a few watts into Canada last year using the world famous N9-NEOphyte. (A very clever and novel design to make nice AM waves.) Maybe this winter a few hundred watts.

http://mysite.verizon.net/vze6qsvc/coolradiostuff22/

The reason for playing with another antenna is just that. I want to experiment. I have trouble sleeping at night knowing there is an unused coax run from the attic directly into the shack. Surely you guys can understand that.

The Horizontal loop is going to be a contender for sure. I like quiet and many times have turned the radio off because of the static crashes. I could easily hang it up in the attic.

Mr Lector's link to antenna site led me to a T2FD which is a folded dipole of sorts. This would also be a contender. It may have a wider bandwidth that the 300 ohm folded dipole. I've been told the US NAVY says it's a good antenna.

And Mr Telamon, I have some ferrite material here that I might be able to wind something on in the way of a Balun. Some #43 or maybe #61 material I think. The cores are a little large, but may end up being very good. I don't think the microvolt level signals would be lost trying to excite a larger core. Have to mull that over some I suppose I would want Xl to be a multiple of the 300 ohms at the lowest operating frequency. Care to take a whack comparing the folded dipole to the horizontal loop and the T2FD?

Thanks again for comments. I'm looking forward to some experiments.

I don't wait till my car is stuck in the dead of winter with a dead battery to replace it. I have 4 daughters that drive, so you can understand my concerns. I usually have a couple of car batteries kicking around here. I'm actually getting ready to go off the grid with my R75 and 2m rigs as well. My 2m rig actually displays the battery voltage for a few seconds when power up.

I don't think I need to be worried about creating hydrogen from charging a battery in the basement. Do I? It will only be a trickle charge.

So there ya go. Go look at your loved one's car battery and if it looks like it might be a little iffy why just yank it out and drag it into the shack. Tell the old lady your concerned that she might get stuck this winter and have her fork over the cash for a new battery. Everybody is happy.

Most regular car batteries are good for about four years (especially in cold weather climates) before they should be replaced with new batteries,so if the battery in your vehicle is about four years old and still in good condition and if you live in a cold weather climate,why not use the old battery for your radio(s) and buy a new battery for your vehicle? I don't know for sure,but some computer back up battery units/systems (I use an APC model 1000 computer backup unit for my computer www.apc.com) just might have a connection on them for 12 volts D.C.current,it's worth cheking out.You could rig a couple of wires directly (with a proper fuse,of course) to the battery in your battery computer backup system.I think.

Thanks, also to RHF and Cuhulin. I just took a look at these gel cells on a couple of websites, incluidng the one recommended by RHF and some others. This, of course, raises more questions :-)

How big a charger must one have? Must the current available on the charger be some minimum fraction of the amp-hours of the battery, or can one use a smaller charger and just leave it on longer?

Also, is the charge time a simple proportion between the charger current and the battery amp-hour value? i.e., to recharge an 18 amp-hour battery with a 10-amp charger, the charge time is 1.8 hours - ?

Is it OK to drain a gel cell until it loses almost all of its charge? Or is there some minimum level at which one must stop (25%, 50% or etc)?

Finally, once the gel cell battery is fully charged, how does one know, and will it hurt if the charger is kept on without checking? Does a charger have a device to shut off when full charge is reached?

Thanks,
Bruce

battery powered kids cars and battery powered two wheelers.I see them every once in a while at the Goodwill store near me.I have no idea how much those gel cell batteries cost or how long gel cell batteries are suppose to last,I have never used them before.
cuhulin <

The sites I checked seemed to have quality gel cells in about the right size (I think) for my application - 12v, 18 or higher amp-hours - starting at around $20 to $40, not bad at all. Chargers are all over the place, from a 1-amp charger at 6 to 20 bucks up to 100-amp chargers (overkill, I'd bet) for silly sums of money.

My kid has a toy motorcycle powered by a gel cell, now that I think of it - requires about 2 hours charge for 1/2 hour use before it gets too weak to be useful. The charger is probably near a trickle compared with the optimal output of the battery, but I will check - thank for the idea!

If the whip gets longer when you touch it, run. Run fast.

I use small bench supplies because I have a lot of small bench supplies. You set it up for 13.8VDC, and the current limit cuts in if the battery wants more. Gell cells don't like excessive voltage, so I avoid the cheaper car battery chargers. My bench suplies range from 1A to 8A, no where near as heavy duty as a car battery charger.

You could buy a "cyclic" charger if you want faster charging. For instance, for the np7-12, you could hit it with 14.5V to 15V at 1.75Amps to charge it. I personally don't like doing this, and rather just set up the float voltage (13.5 to 13.8V). I only mention the np7-12 because I have one next to me. The one I use in the field is much larger, and unfortunately not handy. [I put it in a West Marine battery carrier, so it's all locked up so to speak.] Note that you can float a SLA (sealed lead acid) at the float voltage forever. That is how you use the battery in backup mode.

The charge time at the float voltage won't be linear. As the battery charges, it draws less current. If you want to quickly charge the SLA, you can buy a cyclic charger. As I said, I use my infrequently, so the bench supply works for me. http://www.xantrex.com/ has chargers meant for SLA, but I still suggest getting two batteries and just floating one on a good bench charger (HP, Labda, Sorensonmetc.] The only problem with a bench supply is some jerk could crank up the voltage.

You can drain the SLA down to 10.5V (i.e. 1.75V/cell). In the field, I use a cheap Harbor Freight DVM. No use getting a good meter all scratched up.

I don't like the idea of using car batteries for this application. The outgassing can ruin electronics or your lungs. SLA batteries are safe enough to install inside electronics gear. I've use noise measuring gear that would disconnect from the mains when making a measurement, using an internal SLA to power the electronics.

Wet cell car type batteries.Back in the 1950's or 1960's,I read in one of my Popular Science or Popular Mechanics magazines if you will drain the acid out of the battery into a porcelain or glass container and flush the crud out of the battery with a water hose (no nozzle on the water hose and the water turned on at low pressure) and then pour the acid through a piece of cloth (to filter out crud in the acid) and pour the acid back into the battery,that will extend the life of the battery.Pure Sulphuric battery acid has a chemical burn equal to 735 degrees temperture,same as a red hot poker at 735 degrees.I used to work at a factory that manufactured auto/truck/lawnmower batteries and believe you me,,, I do know about that pure sulphuric battery acid! One drop of it on your hide will make you jump ten feet high! The acid in the car type batteries is very,very watered down.

Freight on these SLA's can be an issue. Sometimes it pays just to buy
the battery in a store.

A bit OT, but depending on where you use the battery, it sometimes
helps to install rubber feet on the bottom IF you will have the battery
sitting on cold cement. I do this for outdoor applications.

I have a VW Jetta with the "shorty" antenna. I am pleasantly impressed that it works better than the long steel type. The active (electronic) antenna is superior, and I get reception when no one else can.

Here is my question for the techys:

I am looking at getting an Avanti. The shorty antenna would look very rakish, and a nice replacement for that stock extended steel. The body on the Avanti is Fiberglass.

1. Do you ground back to the frame?
2. I suspect that the shorty antenna uses the metal roof as a ground plane, true?
3. If true, what is the implications for using the shorty, active antenna on the fiberglass?
4. What are the different model names/numbers for such an antenna, and what is YOUR OPINION of each?

URLs appreciated

thanks!
terry

You need to run a ground strap to the frame, but the lower mounting on
the Avanti's rear fender may hurt reception a bit as well as the poorer
ground plane.

I don't know the answer to your question, but I can tell you this

a) the VW antenna has a star washer under its mounting nut, so your assumption that it is grounded to the car body may be correct. If that is the case you will need to probably solder a lead to a large flat washer to replicate that setup.

b) the manufacturer of said antenna is "Fuba" which might help you in your search for information.

Personally, I haven't had much luck with Fubas, every car I've had that is so equipped has had zippy AM reception, as the amplifier section is already blown by the time I acquire the car. (I tend to buy my daily driver type vehicles fully depreciated.) Also, shit you not, squirrels apparently like to gnaw on them. Dunno if that's of concern to you or not, but replacement masts are available and just screw in. (take them off before going through a car wash, too...)

If you do choose to go forward with this and are looking for economical sources, I'd look to the VW aftermarket, such as parts4vws.com or similar.

Another thought would be to use the trunk mount antenna from a GT Hawk, it looks very Fuba-like but is "period correct." I don't know if there is any way you could rig Fuba guts to work with the Stude trunk mount unit, but if it could be worked out I might consider doing that for my '55 coupe.

Finally, I've even seen fender-mount Fubas; I know they were used on A3 cabrios. Might be able to adapt one to work in the stock location rather than having to drill a hole in the roof (yikes!) to mount the angled-back style.

You may also want to post to rec.autos.makers.vw.watercooled or to the Vortex...

good luck,

nate

Hello All,

We have moved into the boonies and radio reception is sadly lacking on AM.

I remember a thread discussing the pro's-and-con's of several of the different varieties and new models.

Can anyone refresh my memory and guide me to the best radio? Did anyone of them have a built-in cassette tape player/recorder?

Many thanks for taking the time to respond!

Alain

As far as I know the II was/is the best.

They can fetch a good price on eBay. I've seen a couple go for $160 or so but it seems if you watch you can get one for around $60-80.

I lucked out a while back and found a near mint example at a thrift store for around $4 or so as I recall.

Dear Bruce,

I own a Century Electri-pac Model BPIP-99 (Portable Electric Power - Cordless and Rechargeable) which meets all your requirements. I bought it several years ago from THE SPORTSMAN'S GUIDE catalog ($75.00 at the time). I do not know if this model is still available, but you could investigate. Similar items are available at THE PEP BOYS.

In fact I have powered my AOR AR7030 Plus and my Wellbrook ALA 330S from this unit. Everything worked fine.

Best,

Joe

I actually prefer the Radio Shack model over the Sangean. I don't have to worry about the silver rubbing off. I bought mine on sale at Rat Shack a couple years ago for around $125 if memory serves me.

Concerning #1, 2 and 3:
Chances are it needs a ground plane of some sort around it. You could
make a ground plane for it by using self sticking copper foil on the
inside of the fiberglass panel the antenna is mounted on. The foil
should extend some distance from the edge of the mounting hole for the
antenna in all directions and then use a metal washer inside the panel
to mount the antenna with, which will make contact with foil.

Source record: 46265

PASSPORT has just released its first new White Paper in quite a long while. It is a complete review of the various AOR AR7030 receivers. Like all PASSPORT White Papers, it is very thorough in its descriptions, comments, impressions, and usage tips. Its technical specifications, laboratory measurements done by Sherwood Labs, are likewise complete and thorough.

Even if you think you can't afford (or will ever be able to afford) such a radio, I recommend that you invest $6.95 (surely you can afford THAT!) and order this White Paper from IBS (PASSPORT) http://www.passband.com . You will be able to see, learn, and appreciate the qualities that make this radio (and others of its ilk) as great as they are. You will be able to use this knowledge in whatever radio you do, in fact, purchase or contemplate purchasing.

And, you never know. Someday you MAY, in fact, have the money to buy this "super-set" (or another similar one) and the knowledge that you get from this White Paper will be worth many, many times its small cost.

You cannot obtain information such as this at any price from any other source.

Finally, it's a terrific read!

Best,

Joe

Hi Terry

I find it difficult to think of the whip for AM radio reception on a car
as 'the antenna'. It is more like a probe of the currents flowing on the
outer surface of the car. The "shortys" on cars with amplifiers mounted
at their base certainly arent antennas.
A plastic car provides the Shorty with an environment thats considerably
different from that anticipated by the original Shorty design.
A strap to the chassis might be a solution for installing a VW amplified
antenna. But,would you consider a radio intended for a Corvette??

Jerry

Look into AGM batteries, they are made for inside use and are spill
proof as well.

Don't use car batteries, they are not made for the kind of ap he's looking for.

Dear Mr. Clam,

I own several copies of all three versions of the GE Superadio (though I can't seem to find the original ones which are in my basement, destined probably never to see the light of day again). Probably the best performer (by a miniscule amount) is the Superadio II though it has the worst build-quality of the three, at least with regard to my samples.

You can buy a new Superadio III from Amazon for about $40.00 or so, and from other sources, certainly for no more than $60.00. When used with a suitable antenna, such as the C. Crane Twin-Coil Antenna or a random long-wire, you will get sparkling performance and excellent sound quality.

It's a pity that this set does not incorporate a synchronous detection circuit which would really add to reception quality. But that, in addition to poor dial accuracy, no dial light, and mediocre build-quality, are its only faults and, at its price, they can be "forgiven."

Best,

Joe

P.S. Don't be tempted by the CCRadio which was touted as "superior" to the GE Superadio. It ain't !!!

The three point chart indicates that even the 31 material might not be
to good at 1 MHz. A lot of the pulse noise from electrical switching is
usually low frequency (in the KHz range) for the fundamental with
harmonics at higher frequencies. The low frequency pulse noise can
saturate radio front ends causing intermodulation products to show up
throughout the range (1 to 30 MHz) of a radio.

If your radio's dial scale needle is off kilter too much and if you can get inside of the radio easy enough,you can slide that needle on that string to sort of get it aligned about right.If the string is a little bit too loose and slips too much,use some violin resin on the string.

I don't think it's a problem to run a car battery inside a house. If you are not doing fast charge with 50amps or so then I wouldn't imagine there is going to be a lot of gas generated. I'm going to stick one under my bench right here in the shack.

My Vette actually has the battery pretty much behind the driver seat. I think old VW Beetles the same - Battery is inside the cabin.

I was on a SSN 637 class nuke sub and as I recall the wrenches used to tighten the batteries down were made of Oak. They probably were worried about a steel wrench being dropped across the bus bars. Lots of joules stored in each cell. I think each 2v cell was about 5 feet high and weighed about 700 lbs.

Am I asking for trouble?

I once worked at Delta Cotton Oil company in the solvent extraction plant.Hexane was the fluid that was used to extract the cotton oil from the cotton seeds.Hexane is kin to cleaning fluid/lighter fluid and very explosive.We were supplied with a bronze ball peen hammer,a bronze crescent wrench and a bronze screwdriver.All of the electric motors that were used in the extraction plant were special explosion proof electic motors,there were 16 explosion proof electric motors in the extraction plant for powering two big coolers and pumps and bucket chain loader esclavators and conveyors.Sometimes a motor would go out or one of the coolers would start leaking too much Hexane vapor and the vapor would just about make you pass out if you didn't get outside soon enough for a lot of fresh air.It was sort of like being drunk,but the wrong kind of drunk,you would start seeing double and triple.

I like to use my computer to translate CW and record shortwave. However, the computer throws out a lot of RFI. If I build a Faraday cage around it, will this help? Does the cage need to be grounded?

Two caveats here. First, if you use an inverter, you can forget about radio operation. They are noise generators. Second, assuming you are using the 12V out, you need to build a positve ground adapter cord for the wellbrook (if it is like the ALA100).

If you have a modern "spreadspectrum" clock generator in your PC, make sure that feature is enabled. It is enabled in the bios.

Sometimes the noise is due to connecting the PC ground to the radio ground, which happens when you use the soundcard. Ferrite clamps on the cable may help. Personally, I don't find the ferrite to be a great solution and am going to experimet with audio transformers to break the ground.

If I were in the boonies, I get the Select-a-tenna AM tuning loop from
C.Crane & company. Combine that with any radio, even the cheapest, and
it'll pull in signals quite well. I've been very impressed with my
loop -- if you can barely hear an AM station, the loop will make it
pop out. It does require careful tuning and pointing, but it does
work.

For FM in the boonies, I'd get a little rotatable beam antenna from
Winegard or whomever.

Bottom line, for your situation, you need more antenna than radio.

Building a Faraday cage around the computer would be a lot of work. Most
of the noise is radiated from the cabling so use ferrite common mode
chokes on the cables.

Unless there's a profit motive for the website, such as sponsor
links, merchadising, or live streaming, updating of websites at Radio
can be haphazard. Employees will be removed from a website within 3
minutes of their exit. But new hires can take awhile before they show up.

And updates of existing information may not happen for months.

There is no casing. You put the ferrite on each end of the audio cable.
Personally, I don't find this very effective. The ferrite is better
than nothing, but you won't eliminate all the noise.

You can do a few experiments to find the noise of the source. For
instance, start the PC recording the audio, then turn off your monitor
and see if the noise level goes down.

Unless you have a PC with power factor correction in the power supply,
your PC will really polute the mains, which in turn is either picked up
by the antenna from the power line radiation, or feeds into your radio
via the power line. If you have a notebook computer, you can try
running the notebook from the battery rather than the mains.

If you have a wellbrook, try moving the antenna further away from the
PC. In general, keep the PC as far away from the antenna as possible.

Source record: 46295

RFC and Telamon,

RF "Choke" Ferrite Material Info :
REF => http://www.mouser.com/catalog/623/660.pdf

>From what I understand most of the pre-assembled Ferrite
Materials are Type # 43 to kill the lower frequency Noise
associated with power lines and electrical devices.
These lower frequency Noise Sources often have many
Harmonics across the High Frequency (Shortwave) Band.
They work well because they reduce the primary Noise
Source Frequency and most of higher frequency Harmonics.

If, however you feel that what you have is a Noise Source
that is not simply an Harmonic of a lower frequency primary
Noise Source. Then one of the other Ferrite Materials like
Types # 31 or # 61 may be the answer if in-fact the Noise
Source is being generated at some higher frequency.

Unless you have the test equipment to truly determine
which of the Noise Sources you have : Then this is simply
a process of trying One-at-a-Time as see what the results
are . . . . YMMV :o)

You only need a ground plane if the aerial transmits - for a receive
only you can kust mount it, end of story.

It is NOT a good idea to connect an earth bond at the aerial end as
the aerial cable and that bond might provide a lower resistance feed
to other vehicle electrics than the designed route and end up causing
severe interference.

Newsgroup: rec.radio.shortwave
Date: 2005-10-29 11:07:40 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130584059.976636.296410@f14g2000cwb.googlegroups.com>
Source record: 46698

RC,

I use 3/4" Schedule 40 White PVC Pipe.
http://www.harvel.com/pipepvc-sch40-80-dim.asp
SIZE = 3/4" / OD = 1.050 / ID = 0.804
WT = 0.113 / Lbs/Ft = 0.226

It Works Like This :
The 2.75 Inch Slinky goes over the 1.05" PCV Pipe.

Hey - Just for Fun - Take the Pipe and slant it at an angle
place the Slinky at the Top-End over the Pipe and let it
slide down - - - Gee this is Fun :o) !

UPDATING THE DESIGN : {ADDENDUM} PART II OF THE
SLINKY - Multi-Band "Off-Center" Vertical Dipole Antenna
for Shortwave Listening.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6094

A 'second' build of this Off-Center-Fed Dipole Antenna
had me use a Ten Foot (120") piece of PVC Pipe to use
the Bottom 17 Inches as the Mounting Section. Plus a
way to Route the Coax Cable Feed-in-Line 'through' the
PVC Pipe vice having it hang on the outside of the Pipe.
So I added a 'new' 3/8" Hole in the PVC Pipe for the Leads
of the Matching Transformer to pass through.

Building the PVC Pipe Antenna Form :
The Ends of the 'cut' Slinky go through the Holes that you
Drill in the Pipe. Drill Four (4) 1/8" Holes through both
sides of the PVC Pipe :
Hole # 1 - One an 17 Inches from the Bottom
Hole # 2 - One 53 Inches from the Bottom
Hole # 3 - One 55 Inches from the Bottom
Hole # 4 - One 119 Inches from the Bottom (1" Top)
Align all Four (4) Holes up along the length of the Pipe.
Plus One 3/8" Hole aligned on One-Side-Only at 54 Inches
from the Bottom for the Feed-in-Line.

Note - Only put a PVC "Cap" on the Top End of this Ten Foot
piece of PVC Pipe to seal the Top from Weather.

Pre-Assembly :
The TV Matching Transformer is connected to the RG6 Quad
Shield Coax Cable. A Fish Line is then fed through the

3/8" Hole and down to the Bottom of the Pipe. The Leads
of the Matching Transformer are pulled up through the 3/8"
Hole.
Note - This places the Matching Transformer and the Coax Cable
Feed-in-Line inside {Hidden in] the PVC Pipe.

Making and Rigging the Antenna Elements :
The Slinky is 'cut' at Turn (Coil) # 36 and you have two
pieces of Slinky :
- One shorter piece with about 36 Turns.
Stretch this one between Holes #1 and #2; and Thread the
each of the Ends into the nearest Hole; then Bend the Tips
over to Secure Ends of the piece of Slinky.
- One longer piece with about 64 Turns
Stretch this one between Holes #3 and #4; and Thread the
each of the Ends into the nearest Hole; then Bend the Tips
over to Secure Ends of the piece of Slinky.

Making the Connection :
Connect the 300 Ohm Leads of the Matching Transformer to
the upper and lower Ends of the Slinky coming out of Holes
#2 and #3. Twist the Lead Wires around the Bent Ends of
the Slinky and Solder them to from a solid joint.

Weather Proofing the Antenna :
Seal all the Holes made in the PVC Pipe.
The Bottom can simply be 'plugged' with Foam.

Mounting the PVC Pipe :
Two Hose Clamps a Foot apart on top of a piece of Top-Rail
works great. One Inch up from the Bottom; Two Hose Clamps
about 12 Inches apart; with about 4 Inches between the Top
of the Top-Rail (Mast) and the Bottom Coil of the Slinky.
- Place the Top-Rail along side the House and secure it.
- Or stick a few feet of the Top-rail in the ground in
the Yard.
Another "Field-Day" Option is to use a 4'-6' Foot piece
of Re-Bar pounded half-way into the ground and then use
two Hose Clamps about a Foot apart to hold the PVC Pipe
bottom about a foot or two above the ground and securely
in an up-right position. (This should result in having
the Bottom Slinky Coil about 4"-6" above the Top of the
Re-bar.)

The Hook-Up to the Radio/Receiver :
* Radios with an 1/8" External Antenna Input Jack.
Use a 90* Elbow "F" Connector with an "F" Connector to
1/8" Mono Plug 'Adapter'.
* Receivers with an SO-239 External Antenna Input Jack.
Use an "F" Connector to PL-259 Plug 'Adapter'.

TIP - To make this 'Limited Space' Off-Center-Fed Verical
Dipole Antenna work better; try using an Active Pre-Selector
with it; between the Antenna and the Radio.

All of these Active {In-Door} Antennas can be used as a
"Pre-Selector" with good results with a 'short' External
Antenna mounted free and clear on the outside of the
House above the Roof or out in the yard.

If anyone's interested, there's currently an HF-150, an HF-225 and the complete HF-150/PR-150/SP-150 combo for auction on ebay.

Yes, I have tried all the obvious...different power suppies,
headphones, etc. I have eliminated all the simple possible problems.
Looking for technical knowledge of component failure that would cause
audio failure.

I don't know, but keep in mind...

that if you're in the U.S., TV channel radios will stop working in 3 to 4 years.

Both houses of Congress have approved bills that will require the shutdown of analog TV transmitters. The House version specifies the end of 2008, the Senate version April of 2009. Assuming that the final bill will set a date between these two, and that the President will sign it (IMHO pretty much certain) that gives you an idea of how long analog TV sound radios will work.

There are no TV sound radios for digital transmissions.

(it is possible to make one but it would be a LOT more expensive than current analog sets and would probably have pretty poor battery life)

I suppose if you really wanted to listen to TV sound around the house, the solution would be to buy a little FM radio transmitter (like the ones Ramsey Electronics sells, or the ones sold for playing satellite radio through the car), attach it to the cable box/satellite box/digital tuner, and use it to rebroadcast the TV sound on an unused FM frequency. You could then use any FM radio to listen.

If she's wanting to listen while jogging/walking the dog/whatever away from the house, she's going to be SOL.

Not true, here's a GM service letter about the fiberglass bodied Vette:

"Antenna Ground Plane Upgrade

GM issued a service bulletin for an improvement to the radio antenna. It
can enhance the quality of FM radio reception. This is applicable for
ï¿½90 through ï¿½91 Corvettes. Some customers have been very impressed with
the results. The results are dependent on the quality your local radio
signals and the quality of the installation. High quality installations
are performed only if the installation is exactly as specified by the
technical bulletin. The improvement was incorporated into factory
production in the ï¿½92 model year.

The method is to create a ground plane for the antenna. Four wires that
are ï¿½ wavelength long join together to form an electrical ground field
at radio frequencies. The C4 Corvette has a narrow steel band located
under the antenna. It is designed to function as a ground plane, but its
area is too small for optimal performance. Other cars donï¿½t have this
difficulty because metal exterior panels provide the ground plane."

>how the signals are radiated- how will you deal with this?

Dale W4OP

Also see W7EL's response to a similar query:
A Faraday cage is an electrostatic shield, not a shield for
electromagnetic fields(*). There would be no advantage to shielding your
equipment from external electrostatic fields.

Shielding your station from electromagnetic fields probably won't solve
any perceived problems, either, and is a much more difficult job. As
others have pointed out, it's often much more difficult to prevent
energy from getting through the shield via power and other conductors
and through seams and door fittings than it is to make the shield
itself. If you don't pay proper attention to the sneak paths where
energy can get in, you're wasting your time making the shield in the
first place.

(*) I found "Faraday cage" in the index of only one of a half dozen
electromagnetics texts. It's not in Terman's _Radio Engineering_ or the
rather old IEEE dictionary I have, either.

For One and All,

My Thoughts on a Slinky Stretched-Out on an Eight Foot Long
PVC Pipe
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6096

Think of (Imagine) an Eight Foot (8') piece of One Inch (1")
Copper Pipe as an Antenna Element.
= = = Looks like a 'Fat' Wire to RF.

Then think of (Imagine) an Eight Foot (8') piece of 3/4" PVC
Pipe with a Single Copper Wire stretched-out along it as an
Antenna Element.
= = = Looks like a 'Skinny' Wire to RF.

Now a Slinky is Coiled 72 Feet Piece of Wire.

Divide 72 by 8 and you have the Number "9".

Next think of (Imagine) the same Eight Foot (8') piece of
PVC Pipe with a Nine evenly space Copper Wires stretched
along it as Antenna Elements.
= = = Looks like a low resistance 'Fat' Wire to RF.

It is 'My Opinion' that a Slinky that is also stretched-out
along an Eight Foot (8') piece of PVC Pipe with the Coils
evenly spaced (72 Feet of Wire) along it as an Antenna Element.
= = = Looks like a high resistance 'Fat' Wire to RF.

Yeah, I think they've all gone into total shock as Rove was not indicted, and Libby will probably go free after a trial. That prosecutor sure is a 'tard boy and he's probably the one that needs to be indicted.

You think so? I know a lot of liberals and none of them are in shock.
Personally, I worry that if Rove were indicted and had to step down, who
does that leave to run the country? Cheney? That's really scarey.

As for Libby, I'm betting he will serve time in prison. (I realize this is
contrary to the maxim that when a liberal is indicted it's because all
liberals are evil criminals but when a conservative is indicted it's
because the prosecutor is a criminal.)

NO, the Kaito does NOT receive TV channel sound. It is very unlikely that you will find a portable radio that picks up AM/FM/SW and the TV bands. There are AM/FM portables that include the VHF TV band, such as the CC Radio.

Try some Mu-metal sheeting around the computer. It acts as an absorber
of radiated stuff. The benefit is that no grounding is necessary.

All you guys, left and right, disappeared four? days ago. There
were only 35 or so messages, (plus another dozen from KooKoolin that
my spam filter ate). (This is using three different NSPs).

If you did post, then somebody decided to cancel all the political
stuff.

My cure for the power outage blues was to go buy a "Jump Start Power Pack"
in the automotive section of the local Target store. This is a 19 Amp
Hour Gel cell in a plastic case with a built in volt meter and jumper
cables, and a "cigarette lighter" power jack on the front. It uses a
seperate wall wart for the charger. It was on sale at about half the
one off catalog price of a similar sized gel battery. $35, as I remember.

They're a standard item in automotive stores and big box discount
stores. Some even have built in 120 volt AC "inverters" built in.
Vector, Coleman (the camping equipment people), and many others
"make" them. (Well, import them from China).

The power hasn't gone out since, but I've used it to start the car
several times.

4265. Medium Wave is alive to the sound of DX

Newsgroup: rec.radio.shortwave
Date: 2005-10-29 17:44:42 UTC
From: steve whitt <stevexxwhitt@uk2.net>
Message-ID: <1130607882.705812.192540@g44g2000cwa.googlegroups.com>
Source record: 46725

Dear Radio Enthusiast

Right now is the season for receiving long distance Medium Wave Broadcast signals. Best conditions are usually Autumn through to Spring but this year we are also rapidly approaching the sunspot minimum, a period that usually enhances reception of long distance MW signals.

Right now long distance MW radio reception is probably the best it has been for more than 5 years - some people say 15 years! Just last week Hawaii was heard for the first time in the UK!!

So there is no better time than now to put on your listening ears and turn the dials. And of course re-join the premier club for radio enthusiasts interested in the medium waves, the Medium Wave Circle.

You will receive Medium Wave News regularly and you will have use of the MWC e-news service and the Reprint Service.

In fact things are even better since right now the Circle has a special offer that will save you money.

Join the Circle now and you can save money on the 2006 World Radio TV Handbook or Passport to World Band Radio. We can save you up to 22% off these books if you order them through the Circle.

To find out more about the Circle please visit www.mwcircle.org where you can download a free sample pdf copy of Medium Wave News. You can also see full details of various membership options, membership forms and payment options.

If you can't wait to join and to save money on WRTH here is our quick deal:

Offer #1: Join the Circle for 1 year
UK: £12 membership rate unchanged for 12 years!!
Europe: £16 30Euro
Rest of World: £21 $35US (airmail delivery of MWN)

Offer #2: Join the Circle for 1 year & get WRTH 2006 ---- SAVE £5
UK: £29
Europe: £34 55Euro
Rest of World: £43 $78US (airmail delivery of MWN)

**** THIS OFFER CLOSES NOVEMBER 15th 2005 ****

All payments should be made to "Medium Wave Circle". In the UK a cheque or Postal Order is preferred. All overseas non-cash payments (e.g. bank draft, International Postal Money Order, Girocheque) must be in GBP

Sterling. We regret that we can no longer accept Eurocheques due the high cost of handling them. Cash payments can be accepted in GBP Sterling or the equivalent in any major currency (please do not send coins through the post). We recommend registered post for cash sent via the post.

You can also use PayPal. If you wish to send payment by this method, then you MUST ADD AN EXTRA 5% to your total to pay the PayPal fee. If the extra 5% is not sent, then the payment will be refused. Paypal payments should be sent to: contact@mwcircle.org .

I look forward to welcoming you to the Circle.

Best wishes and good listening.

dBpowerAMP Music ConverterT http://www.dbpoweramp.com/dmc.htm converts most anything and is free, except the MP3 encoder times out after 30 days unless you buy a license. WMA and Ogg Vorbis are better quality than MP3 at low bit rates and both are free. I think AAC/MP4 is the highest quality low bitrate codec and may be free, too, although it is descended from MP3 so I don't know why it would be.

I once thought about buying a Kaiser Manhattan car (a beautifull car) about thirty five years ago from a guy in Pearl,Mississippi.(Pearl is a suburb city www.devilfinder.com Pearl Mississippi just across the beautifull Pearl River,East of beautifull Jackson) I don't know why I didn't buy that beautifull car,he was asking six hundred dollars for the car,it had a great rust free body on it,it was a maroon color car and when he started it up,the engine sounded good and didn't smoke either.I never owned a Studebaker before,but I do own a Studebaker chrome bullet with the bullet mounted in the chrome ring from I think a 1950 or 1951 Studebaker car and a big Oldsmobile Rocket hood ornament and two smaller Oldsmobile Rocket fender ornaments,the Oldsmobile car the ornaments were on dates back to the 1950's.I bought that stuff as well as many other auto related ornamments (auto tube type radios too) from some local junk yards around here many years ago.There are a few guys around here who want to buy my old Oldsmobile hood and fender rocket ornaments to put on their cars and "dress em up".I don't get rid of my old things though.I also own a like new Studebaker radiator heat gage,it is sort of like a thermometer,the kind of gage that dates back to the 1920's or 1930's.The gage replaces the usual radiator cap on those old cars.I own a 1914 Ford Model T car too.I bought it from a guy in Sioux Falls,South Dakota in November 1971.He and his wife were moving to Minneapolis and they couldn't take the car with them.

4278. Re: Running a radio from a large rechargeable cell or battery

Newsgroup: rec.radio.shortwave
Date: 2005-10-29 19:26:38 UTC
From: nm5k@wt.net
Message-ID: <1130613998.570103.86000@g44g2000cwa.googlegroups.com>
Source record: 46738

I have to agree.Regular car type batteries should not be used inside a
home,to dangerous.
cuhulin

No more dangerous than any other lead acid battery. I've run
radios off car batteries in the house for years on end, with
no problems. I prefer a deep cycle, and just bought a new one
when we had the hurricane scare, but I can use auto batteries
with no problems. You just don't wanna discharge them as far
as a deep cycle, and even deep cycles I try not to fully discharge.
I use a sears 12-2 automatic charger. My IC-706mk2g runs off
battery power 24/7 nearly. Been running at least one radio off
batteries in the house since the late 80's, and have never had
any kind of problem. Not even corrosion, or leakage. Sure, you
get terminal corrosion, but it's no big deal as long as you don't
get it on anything else when you are cleaning it off.
As far as the original poster, I prefer the big lead acid batteries.
Yea, they are heavier, and have acid, but they have more capability
than most other types. The new deep cycle I just bought is a medium
size rated at 85 amp hours. Being my 706 draws about 2 amps
on full lit receive, I can run over 40 hours in theory. Of course, when

the battery gets low, the voltage will drop. Often to an unusable
level. So this is another advantage to a big manly battery. I probably
wouldn't get the full 40+ hours due to the voltage drop. Just think
about the small batteries...:(Not too good, if you draw current.
I also transmit at up to 20 amps draw, so I *really* have to have a
big battery if I actually wanna do anything useful. BTW, yes, I smoke
in the same room as the battery, and it's no problem at all. I've
never actually been able to notice or even smell the fumes from
the battery charging. It's not a problem, even in a closed room,
as long as the charge rate doesn't get silly... Charging at high
rates generates more heat and gas than slow or trickle charging.
Just use common sense, and you won't have any problems.
MK

"N" - and so what do you recommend to a Shortwave Listener
(SWL) who simply has a 25-30 Foot Square Backyard ? ? ?
This same Broadcast Program SWL, who only can get their
Antenna Wire up about about 15-20 Feet High; and wants to
hear everything from 500 kHz thru 30 MHz ? ? ? ~ RHF

Dunno. I guess it's up to them, and how far they wanna go
with it. I can sit out in my truck and listen to anything from LW to
UHF. And it only takes up half a garage space worth of room. MK

But when you are connecting or disconnecting things from the wet cell battery terminals,you have to think about just what one spark can or could do.I have seen many,many blown up wet cell car type batteries in junk yards before.My Sears Die Hard deep cycle battery says on there,Marine Starting and Deep Cycle/RV.
27524 Group 27M 750MCA 575CCA 180AC On the top side edge on one side of the battery,it has the (I think) date when it was bought by me or when the Sears store auto department stamped the battery and put it on a shelf,whatever,the date looks like it was melted into the edge with some sort of a heat tool.101 130 TM. I think those are the date numbers,really it's kind of hard for me to tell,melted in and kind of raggity looking,that last 0 in that date stamp number might be a 6.I guarantee you,I wouldn't want to drop the battery on my foot!

Source record: 46741

Wet cell car type batteries.Back in the 1950's or 1960's,I read in one
of my Popular Science or Popular Mechanics magazines if you will drain
the acid out of the battery into a porcelain or glass container and
flush the crud out of the battery with a water hose (no nozzle on the
water hose and the water turned on at low pressure) and then pour the
acid through a piece of cloth (to filter out crud in the acid) and pour
the acid back into the battery,that will extend the life of the
battery.Pure Sulphuric battery acid has a chemical burn equal to 735
degrees temperture,same as a red hot poker at 735 degrees.I used to
work
at a factory that manufactured auto/truck/lawnmower batteries and
believe you me,,, I do know about that pure sulphuric battery acid! One
drop of it on your hide will make you jump ten feet high! The acid in
the car type batteries is very,very watered down.
cuhulin

There may well be something to that. Most batteries die cuz a
piece of crud, etc, shorts out a pair of plates. A lot of crud builds
up after a few years. When the battery gets knocked around, they
can break loose, and fall to the bottom where they can short plates.
If this didn't happen, batteries would last way longer. I'm probably
too
lazy to try cleaning my batteries, but it probably does help.. MK

You can get high capacity SLA batteries, so there is no need to bring
car batteries into the house. Since the SLA is sealed, it is
substantially safer in the house than a car battery. The only drawback
to SLA is they don't handle overvoltage very well, which is why I
prefer to use a current limited bench supply that I set with a DVM.
Yuasa has 65AH batteries, Powersonic has 200AH, etc. It's cheaper to
get the used smaller batteries. My NPX-150R was $20 or $25 used (I
don't recall the exact price) and is 40AH.

Hi,
I have a Grundig 400 PE that eats AA batteries but is an OK receiver
for international news etc. Single sideband is a BFO
knob. How does the Sony 7600 compare to the Grundig 400?
I am the happy owner of a Sony ICF-2010. I take the Grundig out on
trips etc.

Wellbrook ALA100 and 40ft of wire in a loop. The only problem is it
costs money, especially with the Bush weak dollar. I can tell by the
serial numbers that they don't sell many of these.

Actually, for 500Khz on the bottom end, you can use about 20ft of wire.

Note that getting the highest S reading really shouldn't be the goal.
Rather, you want the cleanest signal. After all, those vertical whips
with the JFET amp can get a high S reading, but the SNR isn't very
good.

I bought a 1950 Dodge four door six cylinder car for nienty five dollars in 1963 at an auto dealer in St.Louis.I didn't know it at the time,but a previous owner of the car had ran over something and busted a hole in the middle of the bottom of the radiator.You know I-44 heading West/Southwest out of St.Louis? I was diving back to SL-60 near Pacific,Missouri and going up one of those lonnggggggg grades along I-44,my car started heating up and steaming.I got out and looked under there and somebody had hammered in a piece of wood to stop up that hole in the radiator.A few weeks later,after I got the raidiator repaired,I sold that Dodge car and I bought a 1958 BMW Isetta car from an Air Force Officer at Scott Air Force Base,Illinois.That old Dodge car did have a good body on it,going and coming up and down those curvy hills from SL-60,you could hear those narrow tires on that Dodge car squealing from a mile away.

I'm not really sure if Ogg is better than Mp3. I believe Ogg Vorbis,
Lame, etc was created to get around license fees. AAC is from Dolby, so
I doubt it would be free. Probably Apple pays a royalty to Dolby.

An interesting compressor is shorten
http://www.softsound.com/Shorten.html

You can use it lossless, or alter parameters as you see fit, trading
file size for quality.

Mu metal is a generic term. You can google to find suppliers. It's not cheap, though you have to wonder why it isn't since the only expensive metal in the alloy is molybdenum (sp).

Copper won't provide magnetic sheilding. I'm at a loss as to why plywood would have copper in it. There is a copper based wood preservative, but it's not copper but rather a compound. Aluminum clad plywood is pretty common in roofing.l

cuhulin@webtv.net wrote:

How pathetically little you comprehend. I gather you're dumb
enough to have interpreted "cancel" as meaning "cancel the postings
off of usenet". Not that comcast would give a damn -- nearly no ISP
will TOS a paying subscriber unless they're costiing the company
measurable dollars.

Back to the bunny basket with you, net nanny.

I'm no expert, but I've been told it's hard to form and hard to handle.
Bending it, or giving it one good bang, can make it lose part or all of
its properties.

i have three of those radios. the audio sounds kind of muffled in all of them. the headphone jacks are very fragile and delicate. one of my radios needed to be turned up so loud just to hear it that the output was clipping and overloaded. the problem turned out to be cracked solder joints where the headphone jack meets the board. BE CAREFUL!!! the solder pads will lift off the board in an instant! dont use too much heat! another mechanical fault could be at the bfo switch, but this would not distort on the fm band. jiggle the bfo switch to look for any effect. for electrical faults check transistors q20 and q21 (audio pre amp) and then check IC 7 and IC 8 (audio power amp) i have the shop manual here for the dx390 so e-mail me for more info. bear in mind that I AM NOT A TECHNICIAN or an ENGINEER! i am just a jack-leg with a soldering iron. i have had lots of trouble with dx390 and have prevailed but i disavow any technical knowledge. advice is at your own risk!

www.devilfinder.com The importance of using heat sinks when working on radios

Also,if you are using earbuds or earphones,never let the earbuds or earphones get too close together with each other or touch each other if the radio is turned on and the earbuds or earphones are plugged into the radio jacks.That can blow a resistor or two and mess up radio sound/audio.

Copperized plywood is mostly used by fed govt in rooms they don't want any electronic signals to leak into or out of.I read about it on the internet about a year ago.And y'all know how it is,,, if it's on the internet,it must be true.

I improved the electro-magnetic shielding of my DX-394 with the use of galvanized steel sheet metal http://www.mods.dk/view.php?ArticleId=2493 . It was cheap and readily available. Reduced the interference from the computer and CRT that was coupling directly into its circuits so that the primary signals getting to the receiver were those from the antenna, far away from the PC, via shielded co-ax. The antenna was a G5RV with a choke for external curents on the co-ax shield made by several coils of the co-ax at the junction with the ladder line and again at the entrance to the house to attenuate interference from inside the house being propagated up the outside of the co-ax.

It's pretty hard to put the CRT into an electro-magnetic box and still be able to see it!

I wonder if grinding up a lot of scrap copper/junk yard copper real fine
and mixing it in with ordinary paint would do any good for shielding?

I guess to complete the discussion, you can get the shielding spray.
I've done this on plastic cased scanners. It's pretty pricey at $20 a
can, though you could do a few scannners/radios with it.
http://www.mgchemicals.com/products/841.html
You can get it off the shelf at Fry's electronics.

I coated a Yupi MVT7100 then checked the RF leakage with a zap checker.
Quite a bit of RF leaked out of the speaker. When I get around to it,
I'm going to put a copper mesh fan filter over that opening.

See my post on the shielding paint.

It's a bit of work to find them, but there are declassified documents
regarding security. They go into accoustics, RF, and even the brand of
paper shreader.

Interesting. That sounds like it has the FSK signal plus
something else. I'm guessing the something else is an RDF signal.
The one I receive has only the FSK.
Thanks for the links.

>the CC Radio.
ok guys . thanks for the info for sure.

.I'll almost forget the TV band requirement and ....well.... I ordered
the KA1102 right after I posted the question anyway...

This will be my first venture into SW and SSB etc in 52 years
...since I was a tyke and my dad put his tubed Hallicrafters HAM set
in my bedroom. I miss dad for sure.

One of these days I am going to have to get a hobby that gets me off
my ass.

World carousing via the little Kaito radio excites me since I am not
in broadband land... (and I don't want to pay for two way dish). ..
I spend a lot of time in an RV.

AFter the fact I saw that the ka1102 goes down to 70FM hz? which
somebody said will likely pick up a few tv channels.

Actually.. making a good radio to pickup vhf and uhf channel seemed
long overdue. But if they are going to drop those broadcast bands in
2008 ...well... so much for that.

fwiw...I bought a cheapy analog 2-13 VHF from a Walmart wannabe and
that was a disaster. ..COBY brand. Dumb...$10...of course it had no
usable capability.

Thanks again.. I'll scout around now. I dug out my old FM Atlas from Esko MN....

Now I need to dig out the Radio
Shack turnstile crossed dipole .. and get it up out here on the northern plains. I thought I'd just stick if on come PCV mounted on the side of the garage...good ground of course...and then run a straight wire throught the trees...right? for AM and SW? I 'll read up some more, I'll read up...

Thanks again...

I have to get back to cleaning out the attic and dump more of my stereo stuff on EBAY. What a hit...looks like $4000 invested... value now...maybe $800 if I am lucky.

Give the skysweeper software a try. You need to record at 11025hz
sampling for the demo mode of the software. No live demod. Looking at
my link, I recorded the beacon in lsb. I recall I had to offset the
frequency by 1Khz, then it worked just fine in skysweeper. I don't know
which direction I did the offset.
http://www.skysweep.com/skysweep.html

I'm a bummed you can't get the 136Khz signal. It comes in like
gangbusters in the SF bay area and in central Nevada. No skip needed,
i.e. you can hear it in the daytime. I haven't seen any posts on it. I
don't normally monitor that low, but I can tell you it must have just
shown up in the last 6 months.

TV channels 2-6 fall in the 54-88MHz spectrum. If the Kaito goes down to 70MHz it'll receive TV channels 4, 5, and 6. Again, until Congress shuts them down<grin>.

> Now I need to dig out the Radio

A turnstile is probably a FM antenna. Hook it to a decent FM receiver (say, your old stereo tuner?) & do some FM DXing...

Yes, a straight wire -- as long as possible, as high in the air as possible, as far from obstructions as possible -- is a good choice for SW. Should work OK on AM too.

Why not? You'd look good as a carved up piece of stone and by your silence, be thought of as less of an idiot who posts under the guise of a backwoods hick.

You're fooling no one with your multiple personalities...every single one of which seems imbued with some very serious character flaws.

Get help, you deviate.

Oh you youngsters. I got the original episodes on 35mm.

Used a carbon arc projector to show them in my basement.

The chokes can be inside or outside the case. When placed inside or
outside the case the chokes should be near the case.

The metal of the case will stop a lot of the noise from getting out of
the the box. Most computer devices cases are either metal or plastic. If
plastic they will be impregnated with absorption material or there could
be conducting foil on the inside.

With the case preventing most of the circuits inside from radiating the
noise it can still get out through the cables going in and out of the
box. That is where the chokes on the cables will help.

When it comes to the monitors (CRT or LCD) noise can also radiate from
the viewing area. There are screens you can buy that are designed to be
both anti-glare and anti-RFI (Radio Frequency Interference) for the CRT
monitors. You just slip the screen over the front of the monitor and
attach a wire to a ground point on the chassis.

What universe do you live in? Name calling and insults by the Ass have done nothing of the sort. He's merely shown just how immature and childish he is. The lack of any social skills whatever serves to embarrass him.

His only redeeming features, to set him apart from his bedfellows, have been his apparent abstinence from necrophilia and bestiality. His love of war crimes, totalitarian governments and alcohol abuse seem to be a constant concern, however.

< snip >

Nothing wrong with using the pipe but you could use nylon cord just as
well. The cord should be easer to use than the pipe.

4333. Indoor antenna setup

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 00:42:29 UTC
From: sdayton@gmail.com
Message-ID: <1130632949.537586.238900@o13g2000cwo.googlegroups.com>
Source record: 46546

Here is the situation. I have no access to a ground except for
laying radials on the floor. No outdoor access at all. I want to try an
indoor longwire and an indoor vertical first before experimenting with
an active antenna. My receiver is Radio Shack DX-398 but I plan to get
an Icom R75 or AOR 7030 soon. Question 1 is it better to run the indoor
longwire to the two longest points in the apartment about 25' and have
an inverted L or run the wire along two walls for a total length of
40'.
Question 2 Am I better off getting the MFJ 956 Preselector tuner or
the MFJ 1610 random wire tuner? Question 3 will either of these tuners
work on a vertical like the wire broomstick setup or a loaded coil
vertical?

Thanks

Sean Dayton

Look around for cracked solder connections on the circuit boards or
connections to the controls.

Sometimes the quick and dirty method of using non-polar electrolytic
capacitors in the single digit range is used to AC connect the audio
between circuits. They can dry out and usually this also causes low
volume along with the distortion.

If an IC amp is used look at the decoupling capacitors for it. Those
capacitors should be right next to the IC amp.

The slinky is going to be a stretched out coil and not behave the same as a copper pipe.

Larger diameter antenna elements are more broad-banded. You can electrically create a larger diameter element with parallel wires separated with spacers.

One way is to 'unsubscribe' from a group by right clicking on the name in the group window, then re-subscribe and limit the amount of message headers downloaded.

When that married Irish woman and her hubby were doing Disneyworld about four years ago,one of the gifts I snail mailed to her via UPS at their hotel room in Orlando was such a computer monitor screen that fits on her 17 inch screen Gateway computer monitor.There is a little wire with an alligator clip on the screen that is used for grounding to her Gateway computer.Her eyes aren't too good,she said that screen I bought at a Wal Mart store is the best thing,it really cuts down on the glare from her computer monitor.

But when you are connecting or disconnecting things from the wet cell battery terminals,you have to think about just what one spark can or could do.

But goes back to common sense. You unplug the power from the *radio* first, then unplug the charger, then you can unhook the terminal connections with no spark. Yes, the deep cycles can be heavy cuz they often have more plates. When I buy batteries, I always go for the largest , and heaviest among a certain price range. Usually, they will tend to be the most capacity. The sealed batteries, gel cells, etc, are fine, but they cost too much vs the regular marine deep cycles.
I think the one I bought about a month ago was hummm, maybe 60-65 bucks...I fergot... Another thing about the deep cycles is they can sub out in the vehicles no problem if one of my auto batteries die..

I don't understand the questions regarding mp3 compression since mp3 is
already compressed.

True, but at varying bit rates, etc...When you convert
a wav to mp3, you can choose the bitrate, and decide
how much "compression" you want. Often many mp3's
can be further shrunk from their present file size with
not too much degradation in sound quality.

How a piece of one or two inch (coiled or sort of straightened
out,press on it with a piece of wood 2 x 4 and roll it out straight on
the floor) long copper plumbing tubing for an antenna?
cuhulin

I made my 6m yagi from hard drawn copper tube.
But you are only talking fairly short element lengths.
There is little advantage to using thick wire vs thin for
HF SWL. All a fat wire will do is slightly increase the
bandwidth, and with SWLing, that would hardly be
noticed. Myself , I wouldn't use a slinky for any antenna.
It's a substandard material, and a funky design anyway.
A short loaded whip or element will be more efficient
using a high Q loading coil, than a long helical winding
using a slinky.
Also, the current distribution will be better with a center
loaded whip, vs a continuous loading coil as an element.
A continuous helical whip also needs some capacitive loading
at the end, if you want a decent performing antenna. IE: a "stinger"
, or "hat", etc...
Otherwise, it will be very lame.
Might as well use regular wire...It's as good as anything else...
You don't see me using copper tube for my long HF dipoles...
Would be silly, and a waste of time. Not to mention valuable
copper... Anything over #14 wire is starting to be overkill...
Actually, even thinner is fine, except #14 is hard to break.
Is a good "general" antenna wire gauge... Some of my dipoles
are #12, but after using both, I doubt I will buy any more #12
wire. It's overkill... #14 is good nuff.

It uses a varactor tuning scheme. The potentiometer that they use for tuning is pretty problematic, and when they get dirty your stations jump around a lot. Add to that the things have atrocious calibration, and cannot be calibrated so that all stations are on the correct spots on the dial.

The audio is pretty good, especially for AM when in broadband mode, but you're shooting craps when you buy one, betting on how the sensitivity and calibration will be. With these, you're better off buying a used one with known characteristics.

>
>Thanks
>
>Sean Dayton

Sean,
Hold off on spending money for a preselector or tuner for now.
Suggest a couple of things to try first, realizing that whatever is
recommended you will need to do some experimenting:
1) Run the wire along the two walls and bring it to the radio and see
how reception is, you can expect to pick up some noise from a variety
of sources (dimmer switches, cheesy computer power supplies, home
entertainment systems etc) but you just could be the lucky one for
whom this does not pose a major problem
2) Using your radio, walk around each room and see which one is the
quietest, put the antenna there and use coax feedline to the radio
3) Consider a loop, run some wire around the perimeter of the ceiling
and give that a try - better yet, go to an outside wall vs an inner
wall and run a loop around that wall, up one side across the ceiling
down the other side and across the floor. I did that in my bedroom
and found it the best of the indoor antennas I've used.
4) Try a dipole, it does not require a ground. You can be creative
and instead of running it straight let it meander into available
space.
5) In regard to the vertical, considering the floot to ceiling height
you have you'll probably only end up with 7 - 8 feet of vertical
antenna - not bad if you are listening @ 25 - 30 mHz but not so good
for lower frequencies.
What it really comes down to is experimentation; there are so many
variables with an indoor random antenna (the available space you have
does not allow a true 'longwire' - what you really have is called a

random wire) that it's tough to say "do A then B then C and it will work."

Good luck

I once considered buying a deep cycle battery about ten years ago for my old van.I don't remember exactly how the guy at the Sears store explained it to me,but the gist of it was it is not a good idea to use a deep cycle battery in place of a regular non deep cycle battery in my van.Something about the alternator or voltage regulator would cause the deep cycle battery to overheat and burst.He seemed to know what he was talking about,so I bought a regular car type battery for my van.

Cheap inverters put out square waves (not quite, but good enough for this discussion). They make a ton of racket, so I can't see how anyone would consider them suitable for use around radios. Further, if your radio runs off of 12VDC, why take a 12V battery, invert it to 117V AC, then step it down and rectify to 12VDC.

For devices that run off of 12V, note that the 12V is nominal. Just about everything can run from the 13.8V float voltage, with margin. The only pain in the arse is the Wellbrook pre-amp, which is positive ground. Touch the case to to a negative ground and you pop the internal fuse. When I use the device in the field, I place it in a zip lock bag, poking a hole for the cable. They really should have insulated the thing. Of couse, you need to build a special postive ground cable (cigarette lighter adapter) and make sure you only use it with the wellbrook.

In the future, I'm going to build a 12V distribution box using cannon connectors. Those cigarette lighter connectors are really crap.

I bought this solar charger and it's great! It took all day to do 2
AA batteries today, but this should double in the summer.

4385. DC Power System (Battery & Charger) to power most of your Shortwave Radio "Needs" !

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 06:21:33 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130653293.207132.32340@z14g2000cwz.googlegroups.com>
Source record: 46595

BpnJ,

Here is an outline of a DC Power System (Battery & Charger)
to supply most of your Shortwave Radio 'needs' for a Daily
use of 3 to 6 Hours.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6134

For your 'perceived' "Needs" you may wish to consider :

1. THE BATTERY :
12 Volt (12VDC) 18 AH Ampere Hour Battery
- - - 18 Hours at 1 Amp
- - 9 Hours at 2 Amps
- 6 Hours at 3 Amps
4.5 Hours at 4 Amps
3.6+ Hours at 5 Amps
- 3 Hours at 6 Amps
- - 2 Hours at 9 Amps
- - - 1 Hour at 18 Amps

Battery Specifications
GPS-12180
Voltage : 12 Volts AGM
Style : AGM
Amp Hour : 18AH
Length : 7.13"
Width : 2.99"
Height : 6.57"
Batteries Per Pack : 1
Weight : 13 lb

This type of Battery is commonly used in in Moterized Wheelchairs.
Why is this "Sealed" Battery Superior to other Batteries?
* Vibration Resistant Design
* Results in longer battery life
* Superior Delivery
* Faster Charging
* Improved overall performance
* 1 Year Full Replacement Warranty
* Limited warranties offered by the competition
* Deep Discharge Recovery
* Extended design life from improved plate conductivity
* 100% Sealed
* No acid tube or spills

* Eliminates acid damage to chrome or painted areas
* Longer Battery Storage Life
* When fully charged, it can be stored up to 2 years
* May be installed in all positions {Except upside down}
* Great for custom installations
* Shipped Fully Charged
* Ready to install upon receipt of battery
Cost - Prices out around US $ 32

BATTERY DUTY CYCLE :
Estimated Battery Daily Average Duty Cycle of 67%
which is about 12 Ampere Hours (AH) per Day.
= = = Resulting in a 50% Battery Power (AH) Reserve Factor.

2. THE BATTERY CHARGER :
Automatic 12 Volt (12V) Battery Charger 1 Amp
Smart Automatic Battery Charger Rated at 1 Amp to Trickle Charge.
Safely charges and maintains Batteries at Full Charge.
http://www.gruber.com/gps-pdflib/brochures/55-805000.pdf
* Automatic Two Stage Charging - This charger is a two stage
Battery Charger designed to fully charge a Battery and maintain it
at proper storage voltage without the Battery damaging effects
caused by unregulated trickle chargers.
* Alligator Clip Lead Cable Included
* This charger can be used for any AGM, Gel Cell, Vehicle,
and Alarm 12 volt batteries.

Battery Charger Specifications :
APC # : 55-805000
Electrical Voltage Rating : 12V
Electrical Current Rating : 1000 mA = 1 Amp
Length : 3.76"
Width : 2.70"
Height : 2.25"
Weight : 2.02 Oz.
Cables : Alligator Clip
Cost - Prices out around US $ 22

Why is this Battery Charger Superior ?
* UL Approved 1 Amp (1000mA) maximum charge Rate
* Automatic Smart 2-stage charging system
* LED's provide visual indication of the charging mode
* Charge or maintain up to 4 Batteries of similar type -
in parallel Internal charge sensing circuitry and
auto-switch to trickle charge
* Smart Safety Circuit to prevent overcharging and prolong battery
life
* Output posts for a variety of charging purposes.
http://cgi.ebay.com/_W0QQitemZ5629570379

CHARGER DUTY CYCLE :
* Estimated Charger Time of 12 Hours for a Battery Daily Average

Duty Cycle of 67% which is about 12 Ampere Hours (AH) per Day.
= = = Resulting in an available Battery Use Time of 12 Hours.
* Estimated Charger Time of 18 Hours for a Battery Daily Average
Duty Cycle of 100% which is about 18 Ampere Hours (AH) per Day.
= = = Resulting in an available Battery Use Time of 6 Hours.

BUILDING THE "DC POWER SYSTEM" SERVICE BOX :
http://www.officeworld.com/Worlds-Biggest-Selection/BDY51532/05Q4/
Use a Metal Box for the Electrical and Safety Enclosure
for both the Battery and Charger.
* Install a standard Electrical Box for a regular AC Outlet
* Use a short 6 to 10 Foot Heavy Duty (Outside) Utility Cord
14-16 AWG between the Wall Outlet and the Metal Box.
* Install a standard SPST Electrical Switch for the AC Power
Switch. [On] and [Off] {Off = Emergency Kill Switch}
* Install a DPDT electrical Switch for the [Charge] and [In Use]
DC Power Output Switching. Note - The "Center" Contacts are
for the [Battery]; with one side [Charge] and the other side [In Use]
* Install the Battery {Up-Right Position}
* Plug-in the AC Power to DC Battery Charger
* Wire the Charger and the Battery to the DC Power Switch.
* Install a Smoke Detector as an Over-Load and Fire Detector.
* Wire the Battery to DC Service Distribution Line.

PLACING THE "DC POWER SYSTEM" IN USE :
1. Ensure that the AC Power Switch is Off and the
DC Power Output Switch is in the [Charge] Position.
2. Plug-in the AC Power Cord to the Wall Outlet.
3. Set the DC Power Switch to [Charge]
4. Set the AC Power Switch to [On]
5. Wait 18 Hours for the Battery to be Fully Charged.
6. Set the DC Power Switch to [In Use]
- - - and enjoy your Radios :o) !

as always - more than you wanted to know - iane ~ RHF

years ago, leaving behind a zombie computer that generates the same
tiny set of boring insults to random usenet posts. No sign of
intelligence in ages.

4389. Shortwave Listeners (SWL) Horizontal Loop Antenna built with common and cheap TV Parts

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 08:38:37 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130661517.084368.304500@f14g2000cwb.googlegroups.com>
Source record: 46649

JD,

Although the Horizontal Loop Antenna requires a little more work
then just a simple Longwire (Random Wire) Antenna or a low noise
Inverted "L" Antenna a la John Doty.

The Horizontal Loop Antenna does offer some advantages :
"IF" done as a beginning Shortwave Listeners (SWL) Antenna
that simply is designed to 'fit' into the backyard; or possibly
around the House under the Eaves; or fit the Loop inside the Attic.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6135

Such a Shortwave Listeners (SWL) Horizontal Loop Antenna
Can be built with common TV 'type' Parts that are available just
about anywhere and are relatively low cost.

Use 300 Ohm Twin Lead as the Wire Antenna Element and
wire the Two (2) Twin Wires in 'Series' to form a Double Loop
with two free ends to connect to the 300 Ohm Leads of the
Matching Transformer.
Note - Common 24 AWG Speaker Wire (Twin) can be used
for the Loop instead of Twin Lead if that is the only thing that
is available to build the Antenna.

Use a TV type 300 Ohm to 75 Ohm Matching Transformer
between the Loop Element and the Coax Cable Feed-in-Line.

Use RG6 Quad-Shield as a Feed-in-Line.

Use what ever available supports you can an try to get the
Loop Wire Antenna Element at least Ten Feet (10') in the
Air; with 15 to 20 Feet being better height above ground.

The Loop can be Round, Sort-of-Octagon, Square, Triangle,
as long as what goes 'around' comes back around to form
a complete 'Loop'.

The Loop Antenna being a so called 'Balanced' Antenna
does not require a Ground for its own operation.

NOTE - For Electrical Safety a "Ground" is REQUIRED for
the Radio Shack's Equipment.

JD - As you point out - Everyone has to start somewhere
and why not start with a Horizontal Loop Antenna for your
Shortwave Listening (SWL) enjoyment with your Radio/Receivers.

If I could recommend anything to a newcomer to SW it would be to get
a good portable that has digital tuning and SSB capability.

The Sony 7600GR is an excellent portable, but fairly expensive.

A better alternative (my opinion) is the Degen DE1103 which can be found on
eBay. Much less expensive and fantastic reception. Best performance for price
paid. Great reception of shortwave with only the built in whip antenna.

If you enjoy Medium Wave (known as AM radio in the U.S.) you might look
at the Tecsun BCL3000. Fair on shortwave, but fantastic on MW.

If SW is the main concern here I'd recommend the DE1103, and if you want to
spend twice as much get a Sony 7600GR.

Lots of people will respond to your post I think and give you good advice. Don't
make a hasty decision. Listening to shortwave takes a bit of effort, you have to know
what's on and how to find it. You want a radio that will make that easier for you.

4402. My new R-1000

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 12:17:35 UTC
From: Mark Sherman <msherman@verizzzzzzzzzzzzzon.net>
Message-ID: <0sc9m1dibffjgclb21f8plvf09q60d0n4r@4ax.com>
Source record: 46662

You may recall my recent posts while I tried to decide which tabletop
reviever to buy.

I found a Kenwood R-1000 on eBay so I decised to buy it. Cost me
US 287.00.

As far as I can tell, it appears to be in very good condition. Smooth,
postive action on the knobs and switches.

I can,t revieve anything above the 11 meter band but I never could
so I don,t think it a fault in the radio. I could be wrong but I
don't think so.
I only using an indoor (on an inside wall) random wire antenna. I
need to set up a good outdoor ant.

My question is on the antenna connection points on the radio.
There are SW A and B connectins and a MW connection. The manual
says that an antenna should be connected to MW for freqs under 2mHz
and to use the SW connection for freqs avove 2mHz.

I find very little improvement by using the SW connections for any
freq.
I find great improvement when using the MW connection all the way up
to the 11 meter band. This is not how the manual says it should be.

Is this normal? Is the manual wrong or is there a maybe a fault in
the antenna connect points on the radio?

Can I connect the same antenna to both the SW and MW points at the
same time. That would basically be jumping one to the other.

What's with the dial calibration ring. There's nothing to calibrate,
it's just a log scale (I think).

Answers to those couple of questions would bring me inline with what
appears to be a fine radio.

Thanks,

4403. "Bow Tie" {Paired} Dipole Antennas for improved Shortwave Listening (SWL)

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 12:27:36 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1130675256.196749.247450@g44g2000cwa.googlegroups.com>
Source record: 46663

JS,

The "Box Tie" design concept can also be applied to a High
Frequency (HF) Shortwave Band Antenna in the form of Two
'equal' Dipoles Fed at 1/4 WL above ground level; with
one Pair of the Dipole Arms Slanting "Up" to 3/8 WL; and
the other Pair of the Dipole Arms Slanting "Down" to 1/8 WL.
The result could be an Antenna with greater Broad-Banded
Characteristics an enhanced Frequency Coverage.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6140

For the 31 Meter Band these "Bow Tie" {Paired} Dipoles
would have Four Arms of 24.2 Feet with a Tip-to-Tip Span
of 48.5 Feet. Having a Ground Foot Print of 42 Feet.

For the Shortwave Listener (SWL) these "Bow Tie" {Paired}
Dipole Antennas : One a "V" Dipole and the other an and
Inverted "V" Dipole would use a 4:1 Matching Transformer.

Converting these Two "Bow Tie" Dipoles Antennas to a Pair
of Loop Antennas : The "Ends" could be 'jumpered' with a
Vertical Wire and the Two Dipole Antennas could become Two
Loop Antennas. In this case the Wire Loop Elements would
have to be Re-Shaped and Re-Sized with the the Up and Down
Slanting Arms of 19.4 Feet and Vertical Ends of 9.7 Feet
for a Total of 48.5 Feet. (Two Half Wave Length Loops)

Here are some Shortwave (SW) Band Dipole Antenna Sizes :

60 Meter Band Dipole Antenna would have Arms of 47.7 Feet
with a Tip-to-Tip Span of 95.4 Feet.

49 Meter Band Dipole Antenna would have Arms of 38.7 Feet
with a Tip-to-Tip Span of 77.4 Feet.

41 Meter Band Dipole Antenna would have Arms of 32.4 Feet
with a Tip-to-Tip Span of 64.8 Feet.

31 Meter Band Dipole Antenna would have Arms of 24.2 Feet
with a Tip-to-Tip Span of 48.5 Feet.

25 Meter Band Dipole Antenna would have Arms of 19.7 Feet
with a Tip-to-Tip Span of 39.5 Feet.

22 Meter Band Dipole Antenna would have Arms of 17.1 Feet
with a Tip-to-Tip Span of 34.1 Feet.

19 Meter Band Dipole Antenna would have Arms of 15.1 Feet
with a Tip-to-Tip Span of 30.3 Feet.

= = = "J. Steffes" wrote:

It's true!

The concept is demonstrated by the old "bow tie" antenna used
for UHF TV reception.

It was merely two V shaped pieces of metal opposing each other
and terminated the the points of the V. In theory, the two V
sections on their sides looked like this >< and behaved like
a broadband verticle antenna with continuously changing
wavelengths provided by the V geometry.

It was much easier to fabricate a metal V for a smaller
wavelength antenna than fan out seperate dipoles for a
bunch of UHF frequencies!

Do I understand Boyd's "fan antenna" correctly?

The different cut-to w/l lengths tend to collect the
frequencies they are most resonant with and they all
funnel down to the balun where they are electro
magentically mixed for presentation to the receiver ?

Have I boiled the theory down correctly

If that's the case, Avoiding the use of traps and
lengths that such designs employ, which might be
dififcult to string, it's simplicity is elegant !

Yodar
.
.
. .
= = = Jack Painter wrote:

A "fan" of one or two shorter antennas under the main long
sloping wire, and tied to the same feedpoint at the Balun
as 'theboyd' suggested works very well. Use insulators and
non-conductive line to tie each 'fan' segment back to the

main antenna. No antenna swithes are required.

This configuration even works for transmit with a tuner.

I use Exeltech inverters for things that won't run directly off 12 or
24 volts, and they are quite clean unless run at or above rated
capacity (Their ratings are quite conservative). Exeltechs are pure
sine wave inverters -- they are very good, and cost more than your
typical Big Box inverters.

As for distribution, I use West Mountain Radio RigRunners with
Anderson PowerPole connectors. These are used by ARES, are rated to
30 amps in 12VDC and are "genderless" in that any connector can
connect to any other.

I've got one and it's ok for a portable radio and a novelty. It drifts a lot and you're constantly retuning the station. It has pretty good sensitivity (receives faily weak signals) but poor selectivity. For instance, tuning in to 9985 kHz, I can also hear WWV on 10000 kHz. The distance between stations on the dial means you only have to move the tuning dial 2 millimeters. Inaccurate dial, hard to find the same station from one night to the next. My first sw radio was a kit and I had no idea where I was tuning. That didn't take away from the fun. Maybe added to the mystery. Maybe a used YB-400 or such would be better, then you could also listen to ssb stations.

I had a Radioshack DX-390 for years that I was fairly happy with.
Now that I have tried others I realise that it was ok but not great.
The front end recently blew and I'm not going to fix it. I would
never buy another SW radio from Radioshack. Not because they suck but
because I learned that other brands give better bang for the buck.

I also have a Degen 1103 which I think is a very nice radio for the
price. Very nice, indeed. There are others but I can't advise because
I haven't used them.

Get something with SSB.

YUASA NP3-6 6V 3.0Ah sealed rechargeable lead-acid battery. This is one of the most popular reliable 6V lead acid batteries around. This battery is found in all types of equipment. Rated 6V 3.0Ah, the batteries we have are new, full power units. They were to be installed into a product so the manufacturer placed 2 strips of "hook and loop" fastener material on one side, however this doesn't effect the battery and it probably could be peeled off (however the adhesive is strong). This battery sells elsewhere for up to $30 each. Remember these are original YUASA not "off brand" batteries! G15560

First thing to do is make sure the antenna switch for short wave is slid over to connect the proper input terminal.Don't ask me how I know. The set has two jacks, allowing you to use two different SW antennas alongside the medium wave one.

> What's with the dial calibration ring. There's nothing to calibrate,
> it's just a log scale (I think).

That's a good question. It does seem redundant. I usually turn to 10.000khz display on the digital readout then zero the spread dial. that makes the mechanical settings match the received signal.

There is a PDF file review here. It may not be very good quality, but is readable:

ftp://80.162.141.166/manuals1/kenwood/R-1000_QST_review@sd9.pdf

Schematics and instructions for the care and feeding of the R-1000 may be downloaded here in the form of zipped files:

http://www.mods.dk/view.php?ListManuals=kenwood

Note that thee is a two file per day limit for downloads here. They have to limit bandwidth usage somehow.

Hope you enjoy the radio. It's fun to use and very reminiscent of the Yaesu FRG-7 in it's tuning.

mike

..another way is to go to 'Edit' in the top row of the mail/news program, then go down to the 'Mail/Newsgroup' settings. There you should see a 'disc space' setting. You can set the amount of days the read messages are kept on your hard drive before being deleted.

If there are any messages you WANT to keep forever, left mouse button drag the header from the subject display window over to a directory in the 'Folders' window. You can make a new directory or use the 'INBOX' one already there.

I didn't get to this last night but today I switched my antenna from
the SW (spring clip) connection to the SW (coax) connection and
noticed a world of difference.
Big time.
I wonder if there if a fault in the SW (cpring clip) connection.

Thoughts?

You should hear all kinds of CB traffic on channel 19, 27.185 MHZ, but like most receivers of that vintage, the 1000 was slightly deaf on the top end.

BTW, and sort of vertical would work well for 25 MHZ and above. I had "big stick" until it died of old age, and it did better than any of my longwire antennas.

If you want the knob off and don't care if it is damaged the safest
way to remove it without damaging the shaft is to:

Drill and tap the end of the knob and push the knob off with an added
bolt.

Eric,
Thanks for sharing the tip on Exeltech, I am going to check them out.
I figured a decent inverter would cost more than a similar capacity
square wave however, having been around a square wave inverter with a
radio I'm pretty sure it's a worthwhile expense. As to the RigRunners
and Anderson PowerPole's ..... once I switched to them I never
looked back!

Sday's response makes perfect sense. here is an alternative I used
after fussing with SLINK's for a couple years. I am an apartment
dweller

Dont get the preselectors. It's likely your problems isnt seperation of
signals, it's acquiring signals. Sday's post summarized my feelings

here's what I did (review follows)

My DX 398 is VERY sensitive and my first antenna for the DX 398 was an
indoor slinky vertical suspended with a telescoping fiberglass crappie
pole thru the center picked up every electron (choked or not) in the
house. Put the antenna outside, added a 9:1 balun and signal quality
improved 50%

MOVED

NO Yard at all

did this:

THIS will solve all your NO LAND PROBLEMS. Mine is on my porch on a 10'
erect PVC pipe

http://www.northcountryradio.com/Published/actant_0896/page1.htm

summarized in a few words:

inf*ckin'CREDIBLE!

Here in Winter Garden florida, several hundred feet
from a high tension line I am receiving portions of
the HF bands hitherto unreceivable on vertical slinky
or the DX 398 whip. It works just as welll on the
Ten Tec RX 320

NEVER RECEIVED CITIZEN'S BAND BEFORE !

I CAN with the North County Antenna

I received (tho sometimes couldnt copy) stations all
the way into the 11 M band. Before I couldnt get
higher than 15 M

In Late October I received VOA Philippines -
Normally, I dont receive Asia here. At ALL !

I havent made any adjustments to the gain control
(left it in the middle) and taped over the access

opening in the PVC tube to the gain control mini-pot
to keep moisture out. The antenna doesnt seem to
introduce noise and I am receiving FAR more than I did without it.

My preconceived reservations about active antennas are kaPUT!

Before the North County Radio antenna I couldnt
receive distant 40M stations, tho this morning I am
receiving central Michigan stations, Missouri,South
Carolina, Washington DC,Texas stations, W or KI 1's,
2's ,3's ,5's 4's,9's,0's

It even works well on 75M where a Looooong "war" is
needed

Cut lil' thang! Mebbe 30" long

http://www.northcountryradio.com/Published/actant_0896/page1.htm

I PVC'd it onto 10 foot of heavy PVC pipe strapped to
my porch fed with interior-type TV video cable (RG 6?)
and radio hooked up with RG 174u (?) that real skinny
coax

When you get yours, get some premade cable with a BNCto
whatever-your-receiver's-antenna-jack-is so you don't hafta solder the
blasted thing..

And you MUST, absolutely, MUST hook up your coax to it with a slip on
F-type cable connecter.

Best regards

Yodar

A continuous helical whip also needs some capacitive loading at the end, if you want a decent performing antenna. IE: a "stinger", or "hat", etc... Otherwise, it will be very lame. Might as well use regular wire...It's as good as anything else... > MK
>

Yodar responds

If it's so funky howcum hams use it on field day? That's how it became known to hams is from Army usage

If its so substandard material howcum even the ARMY used it in the field as an expediency antenna? In Florida we have hurricanes and rain almost daily. The cadmium plating or whatever it is plated with has shown no corrosion.

Yes, for transmitting you do need a cap or a stinger, but for receive only a SLINKY works fine. I have dozens of citations of people successfully using them for SWL.

The SLINKY is a NICHE-market antenna and is a successful product IMO which is why they appear in various forms on Ebay.

Mine suspended up with a 13' fiberglass telescoping pole outside for more'en a year with a 9:1 balun works fine and is idiotproof.

Everything you say about the benefits of wire are true for those that can string it. I cant.

What you say about a center loaded whip being suiperior to a slinky is true to YOUR application.

But I have used verious Hustlers and find them too narrow banded and that is because they are designed for transmitting. I dont do that.

I want broad band.

The SLINKY's inherent resonance peaks within the 40M band so it decreases performance-wise till 18 Mhz where it's dead (usingDX 398 and RX 320)

For apartment dwellers, It IS an good expediency antenna unless you choose a active antenna which I am using now.

And I think the whole purpose of the investigation was to determine if
anyone committed a crime. "Fitzmas" and "Fitzween" are cynical terms
reflecting partisan points of view. I don't think the investigation was
party-driven, although, clearly, the two opposing parties stand to "win" or
"lose".

>
Funny is when a stupid bank robber writes the robbery note on the back of
his own deposit slip with his name & address printed on the front. Libby's
(alleged) actions, are pathetic for a high-paid government official. Whether
he "needed" to protect Cheney is moot; it looks as though that may have been
his purpose. And not necessarily to cover an illegal act, but maybe just to
cover the fact that Cheney sought to do harm to Wilson.

Yodar responds

>If it's so funky howcum hams use it on field day?

I've never actually seen a ham use one on field day. I know
for sure, *I* would never use one on a field day.
Wanna see one antenna I use for field day?
http://web.wt.net/~nm5k/fd01-1.jpg
A view from above.... That is at a fire training facility...
But....I would be glad for more hams to use slinky's on
field day. That way I'll remain with the usual higher scores.
And we *won* 10m with this antenna that year... I bet no
slinkys *won* their band of choice...
How do I get all that to a site? Like this...
http://web.wt.net/~nm5k/fd2.jpg
I carry the tower and beam on a motorcycle trailer...
BTW, it will also brown the food on 20 and 15 meters.

>That's how it became
>known to hams is from Army usage

So? That makes it good?

>If its so substandard material howcum even the ARMY used it in the
>field as an expediency antenna?

I dunno. You would have to ask them...

>In Florida we have hurricanes and rain
>almost daily. The cadmium plating or whatever it is plated with has
>shown no corrosion.

But is this plating a good surface for rf? I'd prefer copper myself.
I bet that stuff is fun to solder to also...

>Yes, for transmitting you do need a cap or a stinger, but for receive
>only a SLINKY works fine. I have dozens of citations of people
>successfully using them for SWL.

Ditto for a piece of straight wire...

>The SLINKY is a NICHE-market antenna and is a successful product IMO
>which is why they appear in various forms on Ebay.

Crap...People have been using slinkys as antennas since at least
the 50's. They have always been a compromise antenna they way
most use them.

>Mine suspended up with a 13' fiberglass telescoping pole outside for
>more'en a year with a 9:1 balun works fine and is idiotproof.

So? My present dipoles have been up since 1994... Wow...Dang let me
try that backwards...Wow...

>Everything you say about the benefits of wire are true for those that
>can string it. I cant.

Well, ok then.

>What you say about a center loaded whip being suiperior to a slinky is
>true to YOUR application.

It's true in any application. All antennas are reciprical between
transmit
and receive properties. I do realize current distribution when
receiving
may not be a big issue though... But...The efficiency will be the same
,
transmit, or receive.

>But I have used verious Hustlers and find them too narrow banded and
>that is because they are designed for transmitting. I dont do that.

Hustlers suck too. I hate those things. Hustler coils are some of the
lousiest junk I've ever used. Lossy they are... My mobile uses home
brew coils. I compared them with the hustlers coils, and it was ugly.
Adding a hustler coil to my mobile turns it into a dummy load on a
stick.

>I want broad band.

Well, ok then...

>The SLINKY's inherent resonance peaks within the 40M band so it
>decreases performance-wise till 18 Mhz where it's dead (usingDX 398 and
>RX 320)

Well, ok then...

>For apartment dwellers, It IS an good expediency antenna unless you
>choose a active antenna which I am using now.

I ain't no apartment dweller....So I don't need to use compromise
antennas. But, even if I did, I wouldn't use slinky's...But thats just
me.
Trust me, I could care less what anyone uses. If it works, it works.
But don't try to tell me they are some kind of great new design or
whatever. People have been using helical wound whips for ages.
Most use regular copper wire though. I know I would.

It's only wire. It's cheap. Try them both.

>Question 2 Am I better off getting the MFJ 956 Preselector tuner or
>the MFJ 1610 random wire tuner? Question 3 will either of these tuners
>work on a vertical like the wire broomstick setup or a loaded coil
>vertical?

Looking at the quality of the receivers you're considering, I'm not
sure you need an external preselector. Those are mainly for cheapo
receivers.

The MFJ random wire tuner will work on any unbalanced single wire
antenna, whether it is horizontal or vertical. It may help to match
the impedance of that antenna to the antenna input of your receiver,
and give a louder signal. If your receiver has a "high Z" or "high
impedance" or "random wire" connector, there may be less need for the
1610 tuner, but it still may help. Personally, I'd get the tuner --
it'll be there for any single wire antenna you try, and can help,
especially if you're listening to a wide range of frequencies from a
single antenna (and it's not that expensive).

One thing to remember, antenna tuners can make a signal louder, but if
you have a lot of man-made noise at your location, the noise will be
louder, too, so your signal to noise ratio will remain unchanged.

It's a cheap radio. The tuning knob is mushy and you'll get most
shortwave stations on two places on the dial. (The higher frequency
is the correct one. They call them "images").

On the other hand, it's quite sensitive. If I wrap the (insulated)
phone cord around the whip, I can pick up pretty much anything that my
R-1000 (a $400, twenty years ago) table top, (with an 70? foot random wire
antenna), can get. (The rub is that the FR200 may not be able to seperate
out the signal from interference. Either from the above mentioned image
rejection problem or the wider bandpass filters). It's also pretty good
on the AM and FM Broadcast bands.

The generator is a joke. And I've managed to screw up a couple of sets
of rechargable batteries. (It uses the same pack as cordless phones,
so you can get new packs at the drug store or electronics shop. That's
just me, rechargables and I don't get along). But it runs an amazing
time on three alkaline AA batteries. I think I've only changed batteries
three or four times in the 15 months or so I've had mine. Using it about
three hours a day.

Jim,

I had the hots for that younger girl, Penny, in the original series. I remember how much I had a "crush" on her way back then. She was so innocent. And I remember how much of a sabotaging wimp Mr. Smith was towards the family but they always rescued him and saved his ass anyway. It was a cute show. I watched it everyday after school but before homework :)

4453. FREE MONEY, WHAT COULD BE BETTER?!

Newsgroup: rec.radio.shortwave
Date: 2005-10-30 18:22:33 UTC
From: THyde00@gmail.com
Message-ID: <1130696553.359482.122550@g49g2000cwa.googlegroups.com>
Source record: 46612

MAKE MONEY!!!MAKE MONEY!!!

MAKE THOUSANDS!!!

I found this on a bulletin board and decided to try it: I don't care about the useless pre-fabricated crap this message usually says. All I say is, it works. Continue pre-fab crap.

WELL GUESS WHAT!!!

Within five days, I started getting money in the mail!! I was shocked!! I figured it would end soon, but the money just kept coming in. In my first week, I made about $63.00 By the end of the second week I had
made a total of $1873.00!! In the third week I had made a total of $9,612.00 and more mail kept coming in!! This is now my fourth week and I
have made a total of $35,165.00 and it's still coming rapidly. It's certainly worth $6.00 and six stamps, and I have spent more than that on the lottery without ever winning!!!
My mailman asked me what was with all the mail , and when i showed him this
system he was amazed and got going at it . Everyday he thanks me , it feels
good to know your helping make other pepole have more time and money to do
the things they care about most .(Dont let this pass you buy , it so easy and it
realy does work) Let me tell you how this works and most important, why it
works.....
also make sure you print this out NOW, so you can get the information off of it, as you will need it. I promise you that if you follow the directions exactly that you will start making more money than you thought possible by doing
something so easy!!

Suggestion: Read this entire message carefully!! (Print it out or download it)

Follow the simple directions and watch the money come in!! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) !!!

IMPORTANT:

This is not a rip-off, it is decent; it's legal; and it is virtually no risk - it really works!! If all the following instructions are

adhered to, you will receive extraordinary dividends.

PLEASE NOTE:

Please follow the directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become apart of the Mail Order business. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to income which is made from people like you and me asking to be included in that list. Here are the four easy steps to success.

STEP ONE:

Get six separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 U.S. $1.00 bills and place ONE inside of EACH of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them. You now should have six sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service.

THIS IS ABSOLUTELY LEGAL!!!!!

You are requesting a legitimate service and you are paying for it!! Like most of us I was a little skeptical and little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-238-5355) and they confirmed that it is indeed legal!!

Mail the six envelopes to the following addresses:

1)M. Boisvert
357-B Presland Rd
Ottawa ,Ont
Canada
K1K 2B4

2)C. Arrison
RR3 box 252
Wyalusing
Pennsylvania, 18853

3)Neil Credit
322a putnam pike
Dayville,CT 06241

4)Jeremy Kellogg
3617 Freemont St.
Erie, PA 16510

5)Christian Fortunati
24 hermitage Ln.
Laguna Niguel, CA 92677

6)Tim Hyde
PO box 41748
Lafayette, LA 70504

STEP TWO:Now take the #1 name off the list that you see above, move the other names up (six becomes 5, 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list.

STEP THREE:
Change anything you need to but try to keep this article as close to original as possible. Now post your amended article to at least 200 news groups. :
(I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!! This is perfectly legal!! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal Lottery laws. Keep a copy of these steps for yourself and whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way. If you were of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft). So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!!!

*****DIRECTIONS FOR HOW TO POST TO NEWS GROUPS!!!*****

STEP ONE: You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit
menu. This will copy the entire letter into the computer's memory.

STEP TWO:
Open a blank 'notepad' file and place your cursor at the top

of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into the notepad so that you will add your name to the
list.

STEP THREE:
Save your new notepad file as a text file. If you want to do your posting in different settings, you'll always have this file to go back to.

STEP FOUR:
You can use a program like "postXpert" to post to all the newsgroups at once. You can find this program at <http://www.download.com>.

Use Netscape or Internet Explorer and try searching for various new groups (on- line forums, message boards, chat sites, discussions.)

STEP FIVE:
Visit message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done.

Congratulations!!!!!!

THAT'S IT!! All you have to do, and It Really works!!!

Yea... maybe someday I'll retire my pair of R8B's and get a pair of RX-340's
(real radios).

As a general question... whatever happened to the WWV signals anyway? Years
ago they came in gangbusters... came pounding in... now I can't hardly hear
them, barely---on any frequency. The South American CB'ers on 10 MHz are
stronger than WWV. I always thought they cut back their power to a
kilowatt---as a ploy to remain on the air when they were going to go dark
because of budget cutbacks

www.devilfinder.com How to open up a President Washington CB Radio

Most of those kinds of CB radios have a few screws on each side of the radio.Remove the screws and the top cover of the radio cabinet should easily lift right off.Spray a few drops of WD-40 (use the little hollow plastic tube with the WD-40) on the shaft area of where the knob fits on to the shaft and tap on the knob lightly a few times with the plastic (or wood) handle of a screwdriver and wait a few minutes and try to pull the knob off.Make sure there isn't a little set screw on the side of the knob holding the knob on to the shaft.You can drill a little hole in the front of the plastic knob and squirt some WD-40 in there too,that might help.

There's the switch on the back panel for which shortwave antenna is
in use. It matters.

>I find very little improvement by using the SW connections for any
>freq.
>I find great improvement when using the MW connection all the way up
>to the 11 meter band. This is not how the manual says it should be.
>
>Is this normal? Is the manual wrong or is there a maybe a fault in
>the antenna connect points on the radio?

Somebody could have been irritated enough that they changed the antenna
wiring around. (It's all there on the back panel. Turn the radio upside
down and take off the bottom plate...). Playing around with antennas
and then forgetting the switch setting is a common problem with us
R-1000 owners.

There's the Coax connector for the shortwave, it's 50 ohms (nominal).
This is what you'd use for a resonant antenna, or for a "tranformer
at the other end of the coax" Quiet Antenna connection. The speaker
(Fanhestock) clip for the wire antenna has a built in tranformer to
make that input 500 ohms. 2 MHz and below use the other speaker clip
wire, it also has a seperate matching transformer.

>Can I connect the same antenna to both the SW and MW points at the
>same time. That would basically be jumping one to the other.

There's a high value (10k ohm) resistor already in there to make
a connection between the two antenna. So medium wave will work
(poorly) off either of the other two connections.

Frankly, it's pretty deaf below 2 MHz. In addition to the seperate input
circuits (with the strange input impedance) for below 2 MHz, there's a
gain spoiler circuit that cuts the sensitivity down to 50 microvolts.

>What's with the dial calibration ring. There's nothing to calibrate,
>it's just a log scale (I think).

On mine it's a chem etched metal dial plate for the 1 MHz of the VFO, with
10 kHz hash marks and every 100 kHz in text. If it's not lighting up

(green), you've got a dead grain of wheat bulb. (The other two lamps (meter, bandwidth) in mine burnt out and are replaced with amber LED/resistors, but the main dial lamps never gone out in mine, so I don't know the replacement procedure).

Fellows,
My past interest was airband scanning and VHF. Now I obtained HF radio and start interested in marine voice communications over ssb.
Since I am newcomer in his occupation, I don't know much so
I'd like to ask those marine aces, where I can learn marine radio basics, freq allocation, shore station callsigns etc.

If you know any web or valuable book on this topic please recommend. I live in Denmark, so I am orientated in Atlantic region most.

Thanks
Edgar

The slinky will be a small aperture element as is the wire.

This has nothing to do with resonance.

If you want a larger aperture element then you can use a pipe or create
the pipe effectively with parallel wires separated with spacers.

Larger diameter elements are more broad-band in nature, which is a
benefit to SW reception.

I have both and believe me the Drake R8B is a real radio. If you get a
chance to check out an RX340 and like it you might consider selling one
of your Drakes to purchase it. That way you own one of each. Sometimes
one works better for me than the other depending on conditions.

I have good reception evenings on 2.5 MHz, 5 MHz and good reception
during the day on 10 MHz and 15 MHz. I rarely have good reception of 20
MHz. I don't have any antennas optimized for 20 MHz either.

My radio-clock has good reception on (I believe it's) 60 kHz.

17,725 and 15,315 sound like a local station with no fading or noise and
17,810 and 11,655 are a few S units weaker.

That is the usual street price. Fry's stocks the NP4-6, slightly
larger, for $11.99.

I still think the used data center batteries are the way to go. Higher
capacity and about 20 cents on the dollar. You guys are really trying
to complicate matters. Just hit the ham flea market and somebody will
be selling these batteries. A bench supply should be about $20. No need
for the cyclic charger. The bench supply will be linear, so it doesn't
generate noise other than the usual diode on the mains.

The only reason to go nicad would be for weight. For some applications,
I've made custom battery packs. This company is top notch for customs:
http://www.batterystore.com/
They weld the tabs on the nicads or NiMH. You pick the batteries. I
suggest Sanyo cells.

Salty Dog,

Hearing a High-Pitched Sound inside the Eton E1 Radio when using XM ?
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1665

Put a Ferrite Snap-On Chokes on both the
DC Power Lead of the AC Adapter and on
the XM Antenna Cable.

First - Try the DC Power Lead of the AC Adapter
about Six Inches from the DC Output Plug.

Second - Try the XM Antenna Cable about
Six Inches from the XM Antenna Plug.

If this does not work then do as "GA" says :
Phone Eton Tech Support at: 1.800.872.2228 (USA)

e1'ing you all ~ RHF

Hi RHF,

Was reading through the info you had given and had a question regarding the 55-805000 Battery Charger. Is this device for charging a battery through the AC current in one's home? I had been looking at the Xantrex 1500 (http://www.xantrex.com/web/id/63/p/222/pt/24/product.asp) because it seemed really convenient in this regard (chargin' it from an outlet at home; no danger of overcharge, etc.). The price, however, is pretty steep for the Xantrex ($270 or so from these boating sources).

Best,

Junius

I think you have your Irwin Allen mixed up.

The Seaview was the ultra high tech submarine in Voyage to the Bottom of the Sea, starring Richard Basehart as Admiral Nelson and co-starring David Hedison as Captain Lee Crane.

You're thinking of the Jupiter II from Lost in Space and Angela Cartwright's character, Penny Robinson vs. Jonathan Harris' Dr. Smith.

Both series were produced by the master of disaster, Irwin Allen, who also brought us The Time Tunnel, Land of the Giants and such greats as Earthquake! and The Towering Inferno.

Dear Bruce,

Specifications on the back of the unit read:

Ratings: 115V Output 300 Watts (2.3 Amps) @ 60Hz
12 Volt Output 20 Amps
12 Volt Input 8 Amps Maximum

I do not remember how long the initial charge took. I leave it plugged in when it is not in use so it is always charged and ready to use. I do not use it often. I keep it as a backup power supply. But it worked just fine when I tried it with my radio and antenna.

Best,

Joe

Hello Junius,

The unit probably would generate noise if one placed it near the radio.
But why would anyone do that? ANY eectrical generator will generate RFI
if a radio is placed close to it. SOMETIMES one has to use common
sense! (That's why they invented extension cords.)

Best,

Joe

SD,

For an In-Door Shortwave Listener (SWL) Antenna consider instead a
Ceiling Loop Antenna Around-the-Room along the Walls at Ceiling Level.

These Ceiling Loop Antennas are usually about 36 to 60 Feet long.
These are usually long enough that an Amplifier / Pre-Selector
(Active Antenna) is not required.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6150

The Wire Antenna Element :
This can be made from Stranded Hook-Up Wire for a single Loop;
300 Ohm Twin Lead for a Series wired Twin Loop; or Speaker Wire
(Paired) for a Series wired Double Loop.

Feed-in-Line for the Ceiling Loop Antenna :
Use a 8-12 Foot longh piece of Twin Lead, Audio Coax Cable;
or Twisted Speaker Wire as a Feed-in-Line from the Ceiling Loop
Antenna Element.

Radio Antenna Connection :
For the Radio Shack DX-398 / Sangean ATS-909 use a "Stereo"
1/8" Plug to plug into the 1/8" "Stereo" External Antenna Jack
on the Radio. Wire One Wire to the Tip and the Other Wire to
the Rear Barrel with the Center un-used.

Junius,

Yes this Battery Charger simply 'plugs' into
the standard 120 Volt AC Wall Outlet.

Looks like a Wall Wart with a Pair of Screw Terminals
to connect the DC Output Feed Wires going to the Battery.

Wall Side - Back View

The so-called sine wave coming out of the inverter will be full of harmonics. The extension cord could make things worse since it would radiate these harmonics. Again, why go from 12VDC to 117VAC and then back to 12VDC? If you really insist on going the inverter route, look for the buzzwords "pure sine" and get the lowest harmonic distortion unit you can find.

Still, I'm baffled why anyone would use an inverter. You have gone from perfection (a battery) to a less than clean power.

I have the 15 minute batteries and the Rayovac charger that works on
12VDC and on 117VAC. No inverter required. In any case, those Rayovac
batteries will not have nearly enough capacity compared to the SLA if
you are running a large table top shortwave rig.

Does anyone have any opinion about the Sangean PT-80 ?? It seems interesting with its manual as well as ditigal tuning. Sangean has been around for more than thirty years ... do they compare well with Sony ?? I've heard that Sony is getting out of the " World Band Reciever " business. They're laying off 10,000 employees worldwide.

With all due respect - nonsense! The Elecri-pac produces a so-called modified sine wave of approximately 120VAC. I plugged both my AOR AR7030 Plus' and my Wellbrook ALA 330S' external power supplies ("floor-wart" and "wall-wart" respectively) into a twelve-foot extension cord and plugged that into the Electri-pac's AC outlet.

The radio is about seven feet away from the Electri-pac and my antenna's contol box is about the same distance. (The loop itself is mounted in my attic.)

Both the radio and the antenna functioned flawlessly and there was no additional noise or any difference WHATSOVER over that from directly plugging them into the mains.

I ran the radio and antenna for about an hour and tried a number of stations on many different wavelengths. Other than the sound that the Electri-pac makes while functioning, there was no way for me to tell what power supply I was using.

Best,

Joe

Source record: 46973

Hello.

I personally have owned three Sangean-made radios. All have been disappointments. The Sangean CCRadio is inferior in performance to the GE Superadio series, the Sangean ATS-808A lasted only about three years before it took its (final) trip to the landfill, and my Sangean ATS-606AP has been "retired" as it is obvious that its computer circuitry is starting to "go." In my experience and opinion, Sangean products have mediocre design and build-qualities.

Also, no Sangean product offers a synchronous detection circuit. I can practically guarantee you that once you have experienced SW listening with this circuit, you will never go back to "straight AM."

I personally own five of the Sony 7600 series - two ICF-SW7600G's and three ICF-SW7600GR's. (I also own two Sony ICF-SW35's.) My oldest '7600G was purchased in 1998 and is still "going strong," as are all the other Sony's.

If you are in the market for a small portable SW radio, I strongly suggest that you buy a Sony ICF-SW7600GR right NOW while the "getting is good."

Doubtless they are going to discontinue their entire shortwave line as it appears that no one in the Sony "higher-ups" has any interest in shortwave whatsoever.

But they haven't discontinued them yet - so NOW is the time to buy one! Believe it or not, you can buy the (superior) Sony ICF-SW7600GR for LESS money than the (inferior, in my opinion) Sangean PT-80.

Best,

Joe

>MK - I like this phase " dummy load on a stick. " :o)

It's no joke though. The "super resonator" hustler coils are
the worst. The 80m version is an exhibition in excess coil
loss. They did this on purpose. To make it easier to "match".
Add enough loss, and anything will look good as far as a
match. Same principal used as the B&W antennas that
use resistance to acheive wide bandwidth. In "small"
antennas, wide bandwidth is actually undesirable as far
as efficiency. The best mobile whips will use very high Q
loading coils.
The silly part is it's very simple to match any short mobile whip.
A single small coil at the base will do the job just fine.
With helical, or even lumped coils, the "matching" coil can
actually be wound into the base of the helical whip, or, can be
a portion of the lumped coil used. The best helical whips will
use a "lumped coil" winding scheme. *Not* a constant wind.
Winding the bulk of the loading coil into the upper section of
the whip improves the current distribution, which in turn directly
effects the efficiency also. Also, take a look at most "hamsticks"
, CB firesticks, etc, etc... Most will wind the matching coil into the
base of the fiberglass stick. Thats what those few turns at the base
are for. You don't need the external matching coil in that case.
Also note that the better sticks wind the bulk of the loading coil
towards the top, and then add a stinger as the needed capacitance.

>OBTW - Slinky Antennas are the most popular
>Antenna 'type' that is sold on eBay.

I imagine cheap "fake" strats and telecasters also outsell
the real deal fenders. That doesn't automatically mean I need one.

BTW, here is another pix of the beam on ground, but assembled.
http://web.wt.net/~nm5k/fd01b028.jpg

It's a full size yagi. Those are traps only, not loading coils.
The reflector is a full 32 ft span. It's a cushcraft A4S that I got
free for yanking a tower down one time. It's a pretty good design.
You see 4 elements, but it's actually a 3 element yagi. The element
spacing is more optimum vs a smaller beam using the same
reflector. The "short" 2nd element is actually the 10m reflector, and
that is the "back" reflector side of the beam. It gives "near" full
size performance on the three bands. "20,15,10". You think that
thing won't hear a knat fart in Africa on 19m? Hummmmm...:)
You'd never wanna use a slinky again...:(
The erection process...

http://web.wt.net/~nm5k/fd01b032.jpg
The tower is tilt/crank, and we just uprighted it in that pix.
It is then cranked up. It's 31 ft at the top. Not real high, but not
bad for a tower that collapses to only 7 ft.
That base is *very* heavy ship steel cut at a shipyard with a
CRC plasma cutter bed. That tower *and* beam stands up by itself,
even cranked up. Out in a field. No slab! It's a stout boy...
The guys are only backup protection. I'm crazy, but I ain't no fool.
BTW...No grounds were used in this apparatus. At all.
It's a complete antenna. The feedline is decoupled
using a coiled coax choke at the feedpoint.

I once considered buying a deep cycle battery about ten years ago for
my
old van.I don't remember exactly how the guy at the Sears store
explained it to me,but the gist of it was it is not a good idea to use
a
deep cycle battery in place of a regular non deep cycle battery in my
van.Something about the alternator or voltage regulator would cause the
deep cycle battery to overheat and burst.He seemed to know what he was
talking about,so I bought a regular car type battery for my van.
cuhulin

Dunno. Never heard that one...But it doesn't make sense, as both
types charge the same method, and both end up with the same float
voltage, etc...I don't normally use them in cars, but I have for a few
weeks
at a time, when another btty crapped on me. Never had a problem.
When I'm in the field, I use my car to charge all the bttys. Deep
cycle,
or auto. Again, never a problem. I use a small inverter for TV/VCR,
etc..

Actually, now that I think about it, my charger does have a deep cycle/regular switch, which I use, but I'm not sure why. I can't see why it would really matter if both types float at 14.4v... I used a small auto trickle charger with an older deep cycle, and never had any problems. I'd have to look into that...

Miso,
In my case the inverter is in a friends cabin and is used to provide
117VAC for some items he feels are 'necessary' such as a cordless
phone & keeping his laptop charged (because he won't get the 12VDC
cord for it). It isn't my home but when I visit and play radio the
inverter makes it tough - so as long as he is going to use an inverter
and I continue to visit and play radio I might as well get him set up
with something that minimizes RFI. As to my radio(s) - they get
powered by a deep cycle battery.

Hope you're no longer baffled, at least in regard to why I would use
an inverter.

A month ago I toured Eben Emael, a late 1930's Belgian fortress above the Maas river near Maastricht. The fortress is famous for the daring surprise attack that disabled its guns within 20 minutes and made it surrender the next day. I will not go to the details here, the Eben Emael Association has a site www.fort.eben-emael.be, there are good descriptions in other Google groups (search Eben Emael in Google groups) as well as a good description of the tour (search Eben Emael Hankinson in Google Groups).

The fort is in what appers to be some kind of a limestone hill. The communication center was underground, about 30 m (100 ft) under the top of the hill. All the communication equipment is gone but I was told that there was only one horizontal antenna, underground, 100 ft below the surface, in a corridor about 100 m (330 ft) long. The guide knew nothing about the power of the transmitter, frequency, or equipment.

I wonder how strong signal could be transmitted or received under 100 ft limestone and what the signal loss may be. I would guess about 50 dB at least. Does someone please have any experience with such underground systems? What would be the most likely frequency used in say 1940 and what could be the reach of such communication system in 1940?

Any thoughts?

Jiri Placek

A rather long story, but I was running my notebook from an inverter because I managed to lose the fitting that goes on my "universal" 12V notebook power supply. [I finally found it in the rails that the car seat slides on.] Anyway, my 117vAC to notebook supply fried from what I guess was the crappy AC coming out of the inverter. Needless to say, I don't advise running a notebook from an inveter. The Targus 12vDC to notebook supply makes a bit of noise on the radio, but nothing like the inverter.

I think "modified sine" wave inverters are OK for power tools and devices that use resistive heating, but I won't power electronics from one again.

Hmmm. The US Navy ELF (extremely low frequency) communication system was designed to send radio transmissions to submarines at considerable ocean depths. But its transmitting antenna is located above ground and that technology wasn't developed until the 1960s or 1970s, if I'm not mistaken. Prior to that, I believe submarines could receive radio only when at or very near the surface.

Could that wire have been a long lead-in cable from an above-ground antenna?

Phil Nelson

Why, yes..I am. I'm glad you found it informative and entertaining. Perhaps you should consider launching a class action suit against the US education system. You've been cheated. It's spelled Canada.

> M II - Is this a self-reflective question ?
> " Ever consider getting professional help ? "

No need. One hundred percent of the bestialist perverts and self confessed necrophiliacs on this newsgroup are good ol' Southern US boys who served in the Yankee military. They were apparently normal before their enlistment.

mike .

Tracy Fort's necrophilia and a deceased seventy two year old cancer
victim, who happened to be my mother:

==========
==========
I'm not drunk. I haven't finished my first 12 pak yet.
I'll get there and when I do it's back to the cemetary.

How far north did the Katrina effect? I saw someone's mom floatin down
the mighty Mississippi!

Dug her ass right up! She was too damn ugly to have sex with before
she died. The old bag o bones fell apart in my hands! She didn't
complain about much either other than the lousy sex she got from those
foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

rattllin' bones!

squeek...squeek...

Skeleton rides 50 cents a pop! If you can stand the smell....I wonder
is she stunk that bad in life?

She is very fresh but not that fresh!

hehe...I love dem bony women....rotten to the core.....

um...umm....good!

Please accept my apology for abusing her. I'm sorry that I did not
toss her back into the black depths that she came from. Next time,I
will be sure to take care of that. I promise that I will refill the
hole with the dirt that came out too. In addition, I will re sod the
plot at no additional charge. Let me also apologize for the milky
substance in her left eye socket, that was an unavoidable accident.
please feel free to include this post in your sig file!

You might as weel keep it up there...I love the ole boney bitch!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and
she began to come alive!
I played dem bones like they never been played and she smiled for me all
the day.

Pork and bones....

DON'T HURT CANADA! I'll miss those nights with the ole bony lady!

The most fun I ever had!

Sporting a new moniker (GraveDigger) just for you and mommy...

He knows the inside of his mom's boney butt! hahahaha

hahahaha.....when you got thru lickin I was stickin.....

==========
==========

This .sig file will continue until Mister Fort posts a sincere apology
to all cancer victims and their families. His refusal to do so says more
about his attitude and upbringing than any of his thoughtless and

hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio. Anyone caring about his well-being should mention the good work of Alcoholics Anonymous to him.

Good catch.

Actually the reference was to the movie of the same name with Walter Pigeon as Admiral Harriman Nelson and Robert Sterling as Captain Lee Crane, which predated the series by three years.

Specifically, the reference was in response to the comment made here about igniting the ionosphere. The movie saw the Van Allen belts ignite, and Nelson was the only one who believed that the Earth could be saved, through the usual highly unorthodox and exquisitely timed controlled mayhem for which Irwin Allen made himself famous.

As for Lost In Space....well anyone who didn't have a crush on SOMEONE on that show just wasn't living right. I worked with a guy at CBS who had a crush on Jonathan Harris. He also had a crush on Tommy Bond, but that's another matter entirely.

We pretty much saw to it that he generally worked alone.

Some nice vintage radios showed up in both series, and especially, movie. If you could notice them around a young Barbara Eden.

That would take care of long distance radio communication that depends on the ionosphere, but wouldn't have much if any effect on line-of-site transmissions.

Much better, though they can be off some, it's generally only 10-15 KHz at
most. The SR III's I've seen (and there have been many), the top end of the
band has been off by as much as 100 KHz.

M II,

What makes you a Cana-Duh-an from Cana-Duh
vice a Canadian from Canada is the fact that you are
self-obsessed with the USA vice simply taking pride
in being a Canadian and being proud of being a good
old Canadian. Instead you seem to despise being a
Canadian; and loath the fact that you are a Canadian.
You have nothing good to say about Canada and can
only mouth words that are aimed at bad mouthing the
USA and denigrating Americans.

It would appear that your only joy in your sad sick
Cana-Duh-ian life s to try and come up with something
Negative to say about the USA and Americans. But,
Alas your obsession leaves you empty and along a
Stranger in your own land. Wanting to belong, but an
Outsider; all the while you are on the inside looking out.

M II - Someday may be you will Grow Up an become a
Canadian and Be Proud of It [.]

M II - 'you' speak of good ol' Southern US boys and Perversion ?

M II - You Are The Poster Boy For All Things Cana-Duh-ian !

M II - When 'you' Cana-Duh-ians consider it a National Pass Time
and "Sport" to KILL BABY SEALS - Now That Is True Perversion [.]

M II - Even the British use Hounds to Hunt the Fox and call it
a Sporting Chance.

But No - In Cana-Duh you lay-in-wait with a bat and bludgeon
the poor cute innocent Baby Seals to Death for their Furs.

m ii - the sickness and perversion of cana-duh ~ RHF

Modified sine (really modified square wave) are hard on almost
anything but pure resistive loads -- even fluorescent lights have
trouble starting on them.

Any variable speed power tool is either going to go at one speed only
or blow the triac (spectacularly) on a modified sine wave inverter.

I can't say enough good things about Exeltech inverters. They are
pure sine wave, less than 1% THD at worst, any power factor, and are
rugged and well-designed. I own three, including one that is powering
the full-tower computer I'm typing this on, along with about a third
of the rest of the house (solar power). It's been running
continuously for 4 years. The other two are in the car, one for tiny
loads and one for larger loads.

Exeltech claims to be in use in the radio rooms of US embassies around
the world, and I certainly believe it.

I don't own stock or have any financial interest. I'm just a *very*
pleased customer.

Source record: 46777

I returned two of these radios.

I bought them to use at my office off battery power and just for AM reception only. The FR200 runs forever off three AA batteries and the AM reception is good. It's a cute little radio and the carry handle is really handy. If you intend to hide this radio away for use in an emergency kit it would probably be a very good choice. However after extended use, both radios I had developed a noisy volume control that needed replacement according to a Grundig service tech I spoke to. I didn't have an authorized Grundig service depot close by, and I felt the postage expense to Toronto for the warranty repair just wasn't worth it.

I ended up buying a Degen DE1107 to use at work just recently. It's an analogue version of the DE1103, so it isn't as power hungry as it's brother, and the sound is fantastic. The Degen DE1103 from China is identical to the Kaito DE1103 available in North America, but you have better warranty protection with the Kaito brand should the radio goes south. Many people report the DE1103 to be an amazing little radio for the price, but there seems to be a few repair issues with the digital tuning and distorted AM reception. See posts at

http://groups.yahoo.com/group/kaito-de1103/

I also own a Degen DE1103 purchased through EBay that required a warranty exchange upon after it's arrival. The replacement radio works fine, but the case came with some minor cosmetic flaws from the factory.

The antenna system was buried underground in the Upper Peninsula of
Michigan (roughly along the American/Canadian border, yeah). It was
decommisioned just recently, as they use different wavelengths for
communications now. It was indeed for communications with subs around
the world - my boss was a CMPO on a series of nuclear subs from
1967-1997, and can talk at length about the ELF system.

The recently reported layoffs are in Sony Electronics of which shortwave receivers are but a tiny component. Given that the both number of shortwave models offered by Sony and the number of companies offering any shortwave radio have both declined precipitously over the past decade it would be no surprise to see the latest Sony 7600 be Sony's swan song.

The Sony brand name has a tough road ahead because for decades they promoted Sony as the maker of precision Japanese electronics and were able to command somewhat of a premium price. Those days are gone because every electronics company offers precision electronics now and they are cheap. Even Sony is making many of it's products offshore in China. So the uniqueness of the Sony brand name has all but disappeared and they have a serious challenge to reinvent the Sony image.

Grab those Japan labeled Sony 7600's now, because they will probably be the last of the old Sony shortwave receivers as we know them. How things have changed for the company that brought us the ICF-5900, 2010 and the long running 7600 series. It is ironic that their Chinese competitor Degen is offering the successful DE-1103 which has more than a passing resemblance to the less-than-successful Sony 7700 with the analog LCD display.

While the 7700 was by design limited in it's coverage and therefore interest to most SWL's, it was not released with the number of design errors that are packaged in the DE-1103. Indeed I think it would have been inconceivable for Sony to release such a product at the time. That buyers will overlook such errors if the price is right is certainly a sign of the times.

Something 'new' from RF Junkie is the LMZ-75 Shortwave Listener
(SWL) Longwire {Random Wire} Antenna Impedance Matcher

LMZ-75 => http://www.geocities.com/qrp_baluns/LMZ-75.html

This has an "F" Connector on the Bottom for the 75 Ohm RG6
Coax Cable Feed-in-Line with a Single Wing-Nut Terminal on
Top to connect the Wire Antenna Element. Note the Ground is
provided via the Coax Cable to the Radio Shack Ground or
intermediate Ground Block in the Feed-in-Line run.

PHOTO-IMAGE - LMZ-75 Shortwave Listener (SWL) Antenna Matcher
LMZ-74 => http://www.geocities.com/qrp_baluns/640-LMZ75-2.gif

Looks sort of like the 'type' of so called "Longwire Magnetic
Balun that is offered by RF Systems Magnetic Longwire Balun (MLB)
http://www.suertenich.com/html/radios/longwire_balun.html
http://www.universal-radio.com/catalog/sw_ant/1484.html
http://www.hard-core-dx.com/nordicdx/antenna/feed/magbal1.html
http://www.hard-core-dx.com/nordicdx/antenna/feed/magbal2.html
http://www.rys.nl/rfsystems2.html
http://www.thiecom.de/mlb.htm
http://www.deltron.nl/MLB.html

LMZ-75 Receiving Specifications
Frequency Range : 500 kHz - 60 MHz
The AM/MW Broadcast Band and Full Coverage of the Shortwave Bands
SWR : Less than 2:1 over Frequency Range

HOW TO - Application Note for Using the LMZ-75
Shortwave Listener (SWL) Antenna Matcher
HOOK-UP => http://www.geocities.com/qrp_baluns/app-lmz-75.html

NOTE - The LMZ-57 differs from the SWL-Z Longwire (Random Wire)
Antenna Impedance Matcher
SWL-Z => http://www.geocities.com/qrp_baluns/SWLZ.html
IMAGE => http://www.geocities.com/qrp_baluns/SWLZ-640.gif

Not at all -- great URL's thanks

There is much wisdom in quotes that is why they are oft quoted

Some new ones I learned yesterday was:
If you are always right, and your friends are always wrong
Then what the hell kind of friends do you have ?

About grudges of the past
I'm sure old so and so appreciates the rent free space in your head

4600. Join "Halloween Party" tonight on SW

Newsgroup: rec.radio.shortwave
Date: 2005-10-31 17:26:13 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <11mcku1fphcs83d@corp.supernews.com>

Pastor Peters plans to have a "Halloween Party" tonight via SW radio. You may want to be sure to attend. I'm sure it will get replayed later but to get in on the live fun and excitement and to be able to call in your comments and suggestions be sure to be listening at 9:00 pm EST / 02:00 UTC on 5.070 MHz and/or 7.465 MHz. I think he will be on both for that first hour. It is to continue for two hours and the second hour will be on 5.070 MHz.

You can click here http://sfaw.org/ to learn all about Scriptures For America Worldwide and his radio schedule which includes almost 500 hours per month of broadcast time -- over 400 hours of that time is on WWCR - World Wide Christian Radio.

Yes... I have a similar Sears Deep-Cycle battery. My battery is in one of those plastic marine battery boxes (Battery Box for Group 24 Size Battery) and I mounted a five position RigRunner on the top cover (RIGrunner Model 4005): http://www.westmountainradio.com/order_us48a.htm I use PowerPole connectors for everything.

My battery is under constant maintenance charge from a little battery charger I built specifically for the purpose. Automatic battery chargers are also available that allow a constant maintenance charge to be applied to the battery for unlimited duration without damage to the battery.

Every new piece of electronics I've obtained, that has a volume knob,
in the last 5 years has needed that treatment in just a few months.
Cheap crap. A shot of Nu-Trol (lubricating control cleaner) fixed my
FR200 right up. But it's a bit of a bitch to get at the damn thing.
As I remember, six screws on the back to get the case open, two of which
are under the serial number label. The knobs pull off, but it's bit
scary how hard you have to pull.

The antenna wasn't underground. They had problems with woodpeckers
drilling nests in the wooden poles that it was mounted on.

There was also a scientific study that found that trees growing
near the antenna were bigger than those further away. They
concluded that it was a small amount of RF heating that helped the
trees grow right at the beginning of spring. Tells you something
about the weather on the Upper Peninsula of Michigan.

They spec 1.5% typical and a 2% limit, which is twice as good as I've
seen on other products.

I guess the closest I have ever been to West By God Virginia was when I was at Fort Jackson,South Carolina.That is the furthest East I have ever been before unless Vietnam is in the far East.In that case,I have been far more East than y'all have.When I was moving my old Jeep over to my back yard a little while ago,That pretty 30 year old brunette single woman next door to me asked me if I wanted to sit with her tonight.I told her I am not much good at sitting.About ten minutes later when I was working on my Jeep,she said,what are you doing? I told her I was playing,you ought to try it sometime.She said,I play all the time.I told her my playing days are over.

1% distortion quoted above by Eric is a very nice number. Both types of inverters square and sine can cause problems with noise. Do not confuse high frequency switching noise with lower frequency harmonic distortion that you would get with square waves. They are not the same. Noise can come from many different sources within the inverter.

Inverter usually has a small switcher running to generate logic supplies, fan voltages, and other various houskeeping chores.
Inverter may also have microprocessor dsp, or a simple microcontroller that runs on MHz clock
Inverter may actually have an intermediate inverter switching at 100kHz or more to get the low level dc up to a higher dc level compatable with your AC mains voltage.
Finally the actual output sine or square wave is generated by switching a big mosfet or IGBT that has very steep edges. 5,000 - 10,000v/us is a reasonable dv/dt to expect. All of these noise sources will contribute to the overall problem.

Various techniques are used with inverters in order to mitigate both radiated and conducted EMI. Proper grounding, routing of wires, sheilding, and finally filtering are all tools of the trade. Best bet is to try and minimis=ze it at the source.

For the casual user best bet may be to start with a manufacturer that others have recommended. Exeltech? LC filters to clean up the output will help. Can set the filter to just above 60Hz and should do nice job. WWW.CWSBYTEMARK.COM might be a good source for toroidal powder iron filter cores.Series traps (directly across the output) might be a good approach if the noise spectrum is known. Mounting the inverter in another box could help. Mounting the inverter in a remote area and using a longer extension cord could help. Wrapping the extension cord around a Hi Mu core where it enters the shack might help as well.

I design large high performance inverters for a living, but I try to buy gear that will run off of 12v.

Regards,
Bob
